**2 Scripting Constants ..... 241**

# 1 JavaScript Object Reference

This section presents all of the object classes in the type library. Each class listing includes the following:

- ▶ Properties of the class, including value type, read-only status, and an explanation.
- ▶ Methods for the class. Constants and value types needed by the method are shown in bold face. Required terms are shown in plain face. All items surrounded by brackets [ ] are optional.
- ▶ Notes to explain special issues.
- ▶ Sample code to help illustrate the syntax and typical workflow usage of the object class.

These examples are intended to be clear demonstrations of syntax, and do not show the best or most efficient way to construct a JavaScript script. Error checking, for instance, is generally brief or missing. However, the examples can be combined and expanded to make scripts with greater functionality.

# Application

The Adobe® Illustrator® application object, referenced using the pre-defined global `app` object, which contains all other Illustrator objects.

## Application properties

Property	Value type	What it is
<code>activeDocument</code>	<a href="#">Document</a>	The active (frontmost) document in Illustrator.
<code>browserAvailable</code>	boolean	Read-only. If <code>true</code> , a web browser is available.
<code>buildNumber</code>	string	Read-only. The application's build number.
<code>colorSettingsList</code>	object	Read-only. The list of color-settings files currently available for use.
<code>coordinateSystem</code>	<a href="#">CoordinateSystem</a>	The coordinate system currently in use, document or artboard.
<code>defaultColorSettings</code>	File	Read-only. The default color-settings file for the current application locale.
<code>documents</code>	<a href="#">Documents</a>	Read-only. The documents in the application.
<code>flattenerPresetList</code>	object	Read-only. The list of flattener style names currently available for use.
<code>freeMemory</code>	number (long)	Read-only. The amount of unused memory (in bytes) within the Illustrator partition.
<code>locale</code>	string	Read-only. The application's locale.
<code>name</code>	string	Read-only. The application's name (not related to the filename of the application file).
<code>pasteRememberLayers</code>	boolean	Read-only. If <code>true</code> , the paste operation maintains the layer structure.
<code>path</code>	File	Read-only. The file path to the application.
<code>PDFPresetsList</code>	object	Read-only. The list of preset PDF-options names available for use.
<code>PPDFileList</code>	object	Read-only. The list of PPD files currently available for use.
<code>preferences</code>	<a href="#">Preferences</a>	Illustrator's preference settings.
<code>printerList</code>	array of <a href="#">Printer</a>	Read-only. The list of installed printers.
<code>printPresetsList</code>	object	Read-only. The list of preset printing-options names available for use.
<code>scriptingVersion</code>	string	Read-only. The version of the Scripting plug-in.

Property	Value type	What it is
<code>selection</code>	array of objects	All currently selected objects in the active (frontmost) document.
<code>startupPresetsList</code>	object	Read-only. The list of presets available for creating a new document.
<code>textFonts</code>	<a href="#">TextFonts</a>	Read-only. The installed fonts.
<code>tracingPresetsList</code>	array of string	Read-only. The list of preset tracing-options names available for use.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>userInteractionLevel</code>	<a href="#">UserInteractionLevel</a>	What level of interaction with the user should be allowed when handling script commands.
<code>version</code>	string	Read-only. The application's version.
<code>visible</code>	boolean	Read-only. If <code>true</code> , the application is visible.

## Application methods

Method	Parameter type	Returns	What it does
<code>beep</code> ( )		nothing	Alerts the user.
<code>concatenateMatrix</code> (matrix, secondMatrix)	Matrix Matrix	Matrix	Joins two matrices together.
<code>concatenateRotationMatrix</code> (matrix, angle)	Matrix number (double)	Matrix	Joins a rotation translation to a transformation matrix.
<code>concatenateScaleMatrix</code> (matrix [, scaleX] [, scaleY])	Matrix number (double) number (double)	Matrix	Concatenates a scale translation to a transformation matrix.
<code>concatenateTranslationMatrix</code> (matrix [, deltaX] [, deltaY])	Matrix number (double) number (double)	Matrix	Joins a translation to a transformation matrix.
<code>convertSampleColor</code> (sourceColorSpace, sourceColor, destColorSpace, colorConvertPurpose [, sourceHasAlpha] [, destHasAlpha])	<a href="#">ImageColorSpace</a> ColorComponents <a href="#">ImageColorSpace</a> <a href="#">ColorConvertPurpose</a> boolean boolean	array of ColorComponents	Converts a sample-component color from one color space to another.
<code>copy</code> ( )		nothing	Copies current selection to the clipboard.

Method	Parameter type	Returns	What it does
<code>cut</code> ( )		nothing	Cuts current selection to the clipboard.
<code>deleteWorkspace</code> ( workspaceName)	string	Boolean	Deletes an existing workspace.
<code>getIdentityMatrix</code> ( )		Matrix	Returns an identity matrix.
<code>getPPDFileInfo</code> (name)	string	<a href="#">PPDFileInfo</a>	Gets detailed file information for specified PPD file.
<code>getPresetFileOfType</code> (presetType)	<a href="#">DocumentPresetType</a>	File	Returns the full path to the application's default document profile for the specified preset type.
<code>getPresetSettings</code> (preset)	string	<a href="#">DocumentPreset</a>	Retrieves the tracing-option settings from the template with a given preset name.
<code>getRotationMatrix</code> ([angle])	number (double)	Matrix	Returns a transformation matrix containing a single rotation.  <b>NOTE:</b> Requires a value in degrees. For example, 30 rotates the object 30 degrees counterclockwise; -30 rotates the object 30 degrees clockwise.
<code>getScaleMatrix</code> ([scaleX] [, scaleY])	number (double) number (double)	Matrix	Returns a transformation matrix containing a single scale.  <b>NOTE:</b> Requires a value in percentage. For example, 60 scales the object to 60% of its original size; 200 doubles the object's bounds.
<code>getScriptableHelpGroup</code> ( )		variant	Gets the scriptable help group object that represents the search widget in the app bar.
<code>getTranslationMatrix</code> ([deltaX] [, deltaY])	number (double) number (double)	Matrix	Returns a transformation matrix containing a single translation.  <b>NOTE:</b> Requires a value in points. For example, ({100,200} moves the object 100 pt. to the right and 200 pt. up; a minus before each number moves the object left and down.
<code>invertMatrix</code> (matrix)	Matrix	Matrix	Inverts a matrix.

Method	Parameter type	Returns	What it does
<b>isEqualMatrix</b> (matrix, secondMatrix)	Matrix Matrix	boolean	Checks whether the two matrices are equal.
<b>isSingularMatrix</b> (Matrix)	Matrix	boolean	Checks whether a matrix is singular and cannot be inverted.
<b>loadColorSettings</b> (fileSpec)	File	nothing	Loads color settings from specified file, or, if file is empty, turns color management off.
<b>open</b> (file [, documentColorSpace] [, options])	File <a href="#">DocumentColorSpace</a> anything	<a href="#">Document</a>	Opens the specified document file.  If you open a pre-Illustrator 9 document that contains both RGB and CMYK colors and <code>documentColorSpace</code> is supplied, all colors are converted to the specified color space. If the parameter is not supplied, Illustrator opens a dialog so the user can choose the color space.
<b>paste()</b>		nothing	Pastes current clipboard content into the current document.
<b>quit</b> ( )		nothing	Quits Illustrator. Note that if the clipboard contains data, Illustrator may show a dialog prompting the user to save the data for other applications.
<b>redo()</b>		nothing	Redoes the most recently undone transaction.
<b>redraw</b> ( )		nothing	Forces Illustrator to redraw all its windows.
<b>resetWorkspace()</b> ( )		Boolean	Resets the current workspace.
<b>saveWorkspace()</b> (workspaceName)	string	Boolean	Saves a new workspace.
<b>sendScriptMessage</b> (pluginName, messageSelector, inputString)	string string string	string	Sends a plug-in-defined command message to a plug-in with given input arguments, and returns the plug-in-defined result string.
<b>showPresets</b> (fileSpec)	File	PrintPresetList	Gets presets from the file.
<b>switchWorkspace()</b> (workspaceName)	string	Boolean	Switches to the specified workspace.

Method	Parameter type	Returns	What it does
<code>translatePlaceholderText</code> (text)	string	string	Translates the placeholder text to regular text (a way to enter Unicode points in hex values).
<code>undo()</code>		nothing	Undoes the most recent transaction.

## Duplicating the active document

```
// Duplicates any selected items from
// the active document into a new document.

var newItem;
var docSelected = app.activeDocument.selection;

if ( docSelected.length > 0 ) {
    // Create a new document and move the selected items to it.
    var newDoc = app.documents.add();
    if ( docSelected.length > 0 ) {
        for ( i = 0; i < docSelected.length; i++ ) {
            docSelected[i].selected = false;
            newItem = docSelected[i].duplicate( newDoc,
                ElementPlacement.PLACEATEND );
        }
    }
    else {
        docSelected.selected = false;
        newItem = docSelected.parent.duplicate( newDoc,
            ElementPlacement.PLACEATEND );
    }
}
else {
    alert( "Please select one or more art objects" );
}
```

# Artboard

An `Artboard` object represents a single artboard in a document. There can be between 1 to 100 artboards in one document.

## Artboard properties

Property	Value type	What it is
<code>artboardRect</code>	<code>rect</code>	Size and position of the artboard.
<code>name</code>	<code>string</code>	The unique identifying name of the artboard.
<code>parent</code>	<a href="#">Document</a>	Read-only. The parent of this object.
<code>rulerOrigin</code>	<code>Point</code>	Ruler origin of the artboard, relative to the top left corner of the artboard.
<code>rulerPAR</code>	<code>number (double)</code>	Pixel aspect ratio, used in ruler visualization if the units are pixels. Range: 0.1 to 10.0
<code>showCenter</code>	<code>boolean</code>	Show center mark.
<code>showCrossHairs</code>	<code>boolean</code>	Show cross hairs.
<code>showSafeAreas</code>	<code>boolean</code>	Show title and action safe areas (for video).
<code>typename</code>	<code>string</code>	Read-only. The class name of this object.

## Artboards methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Deletes this artboard object. You cannot remove the last artboard in a document.

# Artboards

A collection of `Artboard` objects.

## Artboards properties

Property	Value type	What is it
<code>length</code>	number	Read-only. The number of datasets in the collection
<code>parent</code>	<a href="#">Artboard</a>	Read-only. The name of the object that contains this dataset
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Artboards methods

Method	Parameter type	Returns	What it does
<code>add</code> ( <code>artboardRect</code> )	<code>rect</code>	<a href="#">Artboard</a>	Creates a new <code>Artboard</code> object.
<code>getActiveArtboardIndex</code> ( )		number (long)	Retrieves the index position of the active artboard in the document's list. Returns the 0-based index.
<code>getByName</code> ( <code>name</code> )	string	<a href="#">Artboard</a>	Gets the first element in the collection with the specified name.
<code>insert</code> ( <code>artboardRect</code> , <code>index</code> )	<code>rect</code> number (long)	Nothing	Creates a new <a href="#">Artboard</a> object and inserts it at the given index in the list.
<code>remove</code> ( <code>index</code> )	number (long)	Nothing	Deletes an artboard object. You cannot remove the last artboard in a document.
<code>setActiveArtboardIndex</code> ( <code>index</code> )	number (long)	Nothing	Makes a specific artboard active and makes it current in the iteration order.

# Brush

A brush in an Illustrator document. Brushes are contained in documents. Additional brushes may be created by the user within Illustrator. You can access brushes within a script, but you cannot create them.

## Brush properties

Property	Value type	What it is
<code>name</code>	string	The name of the brush.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this brush.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Brush methods

Method	Parameter type	Returns	What it does
<code>applyTo</code> (artItem)	<a href="#">PageItem</a>	Nothing	Applies the brush to a specific art item.

## Applying a brush

```
// Duplicates and groups all items in the current selection,
// then applies the same brush to each item in the group

if ( app.documents.length > 0 ) {
  docSelection = app.activeDocument.selection;
  if ( docSelection.length > 0 ) {
    newGroup = app.activeDocument.groupItems.add();

    for ( i = 0; i < docSelection.length; i++ ) {
      newItem = docSelection[i].duplicate();
      newItem.moveToBeginning( newGroup );
    }
    brush4 = app.activeDocument.brushes[1];
    brush4.applyTo( newGroup );
  }
}
```

# Brushes

A collection of `brush` objects in a document.

## Brushes properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. The number of objects in the collection.
<code>parent</code>	<code>object</code>	Read-only. The document that contains this brushes collection.
<code>typename</code>	<code>string</code>	Read-only. The class name of the referenced object.

## Brushes methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	<code>string</code>	<a href="#">Brush</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	<code>string, number</code>	<a href="#">Brush</a>	Gets an element from the collection.

## Counting brushes

```
// Counts all brushes in the active document

if ( app.documents.length > 0 ) {
    numberOfBrushes = app.activeDocument.brushes.length;
}
```

# CharacterAttributes

Specifies the properties of a character contained in a text frame. A `CharacterStyle` object associates these attributes with a specific text range through its `characterAttributes` property.

**NOTE:** Character attributes do not have default values, and are undefined until explicitly set.

## CharacterAttributes properties

Property	Value type	What it is
<code>akiLeft</code>	number (double)	The amount of inter-character spacing to be added to the left side of the character, in thousandths of an em (that amount will not compress or expand during full-justification).
<code>akiRight</code>	number (double)	The amount of inter-character spacing to be added to the right side of the character, in thousandths of an em (that amount will not compress or expand during full-justification).
<code>alignment</code>	<a href="#">StyleRunAlignmentType</a>	The character alignment type.
<code>alternateGlyphs</code>	<a href="#">AlternateGlyphsForm</a>	The alternate glyphs form.
<code>autoLeading</code>	boolean	If <code>true</code> , the automatic leading should be used.
<code>baselineDirection</code>	<a href="#">BaselineDirectionType</a>	The Japanese text baseline direction.
<code>baselinePosition</code>	<a href="#">FontBaselineOption</a>	The baseline position of text.
<code>baselineShift</code>	number (double)	The amount of shift in points of the text baseline.
<code>capitalization</code>	<a href="#">FontCapsOption</a>	The case of text.
<code>connectionForms</code>	boolean	If <code>true</code> , the OpenType <sup>®</sup> connection forms should be used.
<code>contextualLigature</code>	boolean	If <code>true</code> , the contextual ligature should be used.
<code>discretionaryLigature</code>	boolean	If <code>true</code> , the discretionary ligature should be used.
<code>figureStyle</code>	<a href="#">FigureStyleType</a>	The number style in an OpenType font.
<code>fillColor</code>	<a href="#">Color</a>	The color of the text fill.

Property	Value type	What it is
<code>fractions</code>	boolean	If <code>true</code> , the OpenType fractions should be used.
<code>horizontalScale</code>	number (double)	The character horizontal scaling factor expressed as a percentage (100 = 100%).
<code>italics</code>	boolean	If <code>true</code> , the Japanese OpenType font supports italics.
<code>kerningMethod</code>	<a href="#">AutoKernType</a>	The automatic kerning method to use.
<code>language</code>	<a href="#">LanguageType</a>	The language of text.
<code>leading</code>	number (double)	The amount of space between two lines of text, in points.
<code>ligature</code>	boolean	If <code>true</code> , the ligature should be used.
<code>noBreak</code>	boolean	If <code>true</code> , line breaks are not allowed.
<code>openTypePosition</code>	<a href="#">FontOpenTypePositionOption</a>	The OpenType baseline position.
<code>ordinals</code>	boolean	If <code>true</code> , the OpenType ordinals should be used.
<code>ornaments</code>	boolean	If <code>true</code> , the OpenType ornaments should be used.
<code>overprintFill</code>	boolean	If <code>true</code> , the fill of the text should be overprinted.
<code>overprintStroke</code>	boolean	If <code>true</code> , the stroke of the text should be overprinted.
<code>parent</code>	object	Read-only. The object's container.
<code>proportionalMetrics</code>	boolean	If <code>true</code> , the Japanese OpenType font supports proportional glyphs.
<code>rotation</code>	number (double)	The character rotation angle in degrees.
<code>size</code>	number (double)	Font size in points.
<code>strikeThrough</code>	boolean	If <code>true</code> , characters use strike-through style.
<code>strokeColor</code>	<a href="#">Color</a>	The color of the text stroke.
<code>strokeWeight</code>	number (double)	Line width of stroke.

Property	Value type	What it is
<code>stylisticAlternates</code>	boolean	If <code>true</code> , the OpenType stylistic alternates should be used.
<code>swash</code>	boolean	If <code>true</code> , the OpenType swash should be used.
<code>tateChuYokoHorizontal</code>	number (long)	The Tate-Chu-Yoko horizontal adjustment in points.
<code>tateChuYokoVertical</code>	number (long)	The Tate-Chu-Yoko vertical adjustment in points.
<code>textFont</code>	<a href="#">TextFont</a>	The text font.
<code>titling</code>	boolean	If <code>true</code> , the OpenType titling alternates should be used.
<code>tracking</code>	number (long)	The tracking or range kerning amount, in thousandths of an em.
<code>Tsume</code>	number (double)	The percentage of space reduction around a Japanese character.
<code>typename</code>	string	Read-only. The class name of the object.
<code>underline</code>	boolean	If <code>true</code> , characters are underlined.
<code>verticalScale</code>	number (double)	Character vertical scaling factor expressed as a percentage (100 = 100%).
<code>wariChuCharactersAfterBreak</code>	number (long)	Specifies how the characters in Wari-Chu text (an inset note in Japanese text) are divided into two or more lines.
<code>wariChuCharactersBeforeBreak</code>	number (long)	Specifies how the characters in Wari-Chu text (an inset note in Japanese text) are divided into two or more lines.
<code>wariChuEnabled</code>	boolean	If <code>true</code> , Wari-Chu is enabled.
<code>wariChuJustification</code>	<a href="#">WariChuJustificationType</a>	The Wari-Chu justification.
<code>wariChuLineGap</code>	number (long)	The Wari-Chu line gap.
<code>wariChuLines</code>	number (long)	The number of Wari-Chu (multiple text lines fit into a space meant for one) lines.
<code>wariChuScale</code>	number (double)	The Wari-Chu scale.

## Setting character attributes

```
// Creates a new document, adds a simple text item
// then incrementally increases the horizontal and
// vertical scale attributes of each character

var docRef = documents.add();
var textRef = docRef.textFrames.add();
textRef.contents = "I Love Scripting!";
textRef.top = 400;
textRef.left = 100;

// incrementally increase the scale of each character
var charCount = textRef.textRange.characters.length;
var size = 100;
for(i=0; i<charCount; i++, size *= 1.2) {
    textRef.textRange.characters[i].characterAttributes.horizontalScale
        = size;
    textRef.textRange.characters[i].characterAttributes.verticalScale
        = size;
}
```

# Characters

A collection of characters (`TextRange` objects of length 1). The elements are not named; you must access them by index.

## Characters properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of characters in the collection.
<code>parent</code>	object	Read-only. The text art item that contains this character.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Characters methods

Method	Parameter type	Returns	What it does
<code>add</code> (contents [,relativeObject] [,insertionLocation])	string <a href="#">TextFrameItem</a> <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Adds a new character with specified text contents at the specified location in the current document. If a location is not specified, adds the new character to the containing text frame after the current text selection or insertion point.
<code>addBefore</code> (contents)	string	<a href="#">TextRange</a>	Adds a character before the specified text selection.
<code>index</code> (itemKey)	number	<a href="#">TextRange</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

## Counting characters

```
// Counts all characters in the active document,
// including whitespace, and stores in numChars

if ( app.documents.length > 0 ) {
  var doc = app.activeDocument;
  var numChars = 0;
  for ( i = 0; i < doc.textFrames.length; i++ ) {
    textArtRange = doc.textFrames[i].contents;
    numChars += textArtRange.length;
  }
}
```

# CharacterStyle

Associates character attributes with characters. For an example, see [CharacterStyles](#).

## CharacterStyle properties

Property	Value type	What it is
<code>characterAttributes</code>	<a href="#">CharacterAttributes</a>	Read-only. The character properties for the style.
<code>name</code>	string	The character style's name.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

## CharacterStyle methods

Method	Parameter type	Returns	What it does
<code>applyTo</code> (textItem [, clearingOverrides])	object boolean	Nothing	Applies the character style to the text object or objects.
<code>remove</code> ( )		Nothing	Deletes the object.

# CharacterStyles

A collection of `CharacterStyle` objects.

## CharacterStyles properties

Property	Value type	What it is
<code>length</code>	number	Read-only. Number of elements in the collection.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

## CharacterStyles methods

Method	Parameter type	Returns	What it does
<code>add</code> (name)	string	<a href="#">CharacterStyle</a>	Creates a named character style.
<code>getName</code> (name)	string	<a href="#">CharacterStyle</a>	Gets the first element in the collection with the provided name.
<code>index</code> (itemKey)	string, number	<a href="#">CharacterStyle</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Using characters styles

```
// Creates 3 text frames in a new document then creates
// a character style and applies it to each text frame.
```

```
var docRef = documents.add();
var textRef1 = docRef.textFrames.add();
textRef1.contents = "Scripting is fun!";
textRef1.top = 700;
textRef1.left = 50;

var textRef2 = docRef.textFrames.add();
textRef2.contents = "Scripting is easy!";
textRef2.top = 625;
textRef2.left = 100;

var textRef3 = docRef.textFrames.add();
textRef3.contents = "Everyone should script!";
textRef3.top = 550;
textRef3.left = 150;
redraw();
```

```
// Create a new character style
var charStyle = docRef.characterStyles.add("BigRed");
```

```
// set character attributes
var charAttr = charStyle.characterAttributes;
charAttr.size = 40;
charAttr.tracking = -50;
charAttr.capitalization = FontCapsOption.ALLCAPS;
var redColor = new RGBColor();
redColor.red = 255;
redColor.green = 0;
redColor.blue = 0;
charAttr.fillColor = redColor;

// apply to each textFrame in the document
charStyle.applyTo(textRef1.textRange);
charStyle.applyTo(textRef2.textRange);
charStyle.applyTo(textRef3.textRange);
```

# CMYKColor

A CMYK color specification, used where a `color` object is required.

If the color space of a document is `RGB` and you specify the color value for a page item in that document using `CMYK`, Illustrator will translate the `CMYK` color specification into an `RGB` color specification. The same thing happens if the document's color space is `CMYK` and you specify colors using `RGB`. Since this translation can lose information, you should specify colors using the class that matches the document's actual color space.

## CMYKColor properties

Property	Value type	What it is
<code>black</code>	number (double)	The black color value. Range 0.0–100.0. Default: 0.0
<code>cyan</code>	number (double)	The cyan color value. Range 0.0–100.0. Default: 0.0
<code>magenta</code>	number (double)	The magenta color value. Range 0.0–100.0. Default: 0.0
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>yellow</code>	number (double)	The yellow color value. Range 0.0–100.0. Default: 0.0

## Setting a CMYK color

```
// Sets the fill color of the frontmost path item in
// the current document to a light purple CMYK color

if ( app.documents.length > 0 && app.activeDocument.pathItems.length > 0 ) {
    frontPath = app.activeDocument.pathItems[0];
    // Set color values for the CMYK object
    newCMYKColor = new CMYKColor();
    newCMYKColor.black = 0;
    newCMYKColor.cyan = 30.4;
    newCMYKColor.magenta = 32;
    newCMYKColor.yellow = 0;
    // Use the color object in the path item
    frontPath.filled = true;
    frontPath.fillColor = newCMYKColor;
}
```

# Color

An abstract parent class for all color classes used in Illustrator. Subclasses are:

[CMYKColor](#)  
[GradientColor](#)  
[GrayColor](#)  
[LabColor](#)  
[NoColor](#)  
[PatternColor](#)  
[RGBColor](#)  
[SpotColor](#)

## CompoundPathItem

A compound path. These objects are composed of multiple intersecting paths, resulting in transparent interior spaces where the component paths overlap. The `pathItems` property provides access to the paths that make up the compound path.

Paths contained within a compound path or group in a document are returned as individual paths when a script asks for the paths contained in the document. However, paths contained in a compound path or group are not returned when a script asks for the paths in a layer that contains the compound path or group.

All paths within a compound path share property values. Therefore, if you set the value of a property of any one of the paths in the compound path, the properties of all other component paths are updated with the new value.

### CompoundPathItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the compound path item excluding stroke width.
<code>hidden</code>	boolean	If <code>true</code> , this compound path item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this compound path item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this compound path item is locked.
<code>name</code>	string	The name of this compound path item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>pathItems</code>	<a href="#">PathItems</a>	Read-only. The path art items in this compound path.

Property	Value type	What it is
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>compoundPathItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this compound path item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item is sliced. Default: <code>false</code>
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this object.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this compound path item.
<code>visibilityVariable</code>	Variant	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the compound path item including stroke width.
<code>width</code>	number (double)	The width of the compound path item excluding stroke width.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this art item within the stacking order of the group or layer ( <code>Parent</code> ) that contains the art item.

## CompoundPathItem methods

Method	Parameter type	Returns	What it does
<b>duplicate</b> ( [relativeObject] [, insertionLocation] )	object <a href="#">ElementPlacement</a>	<a href="#">CompoundPathItem</a>	Creates a duplicate of the selected object.
<b>move</b> ( relativeObject, insertionLocation )	object <a href="#">ElementPlacement</a>	Nothing	Moves the object.
<b>remove</b> ( )		Nothing	Deletes this object.
<b>resize</b> ( scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout] )	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> ( angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout] )	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> ( transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout] )	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ( [deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns] )	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> ( zOrderCmd )	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Selecting paths in a document

```
// Selects all paths not part of a compound path

if ( app.documents.length > 0 ) {
  doc = app.activeDocument;
  count = 0;
  if ( doc.pathItems.length > 0 ) {
    thePaths = doc.pathItems;
    numPaths = thePaths.length;
    for ( i = 0; i < doc.pathItems.length; i++ ) {
      pathArt = doc.pathItems[i];
      if ( pathArt.parent.typename != "CompoundPathItem" ) {
        pathArt.selected = true;
        count++;
      }
    }
  }
}
```

## Creating and modifying a compound path item

```
// Creates a new compound path item containing 3 path
// items, then sets the width and the color of the stroke
// to all items in the compound path

if ( app.documents.length > 0 ) {
  doc = app.activeDocument;
  newCompoundPath = doc.activeLayer.compoundPathItems.add();

  // Create the path items
  newPath = newCompoundPath.pathItems.add();
  newPath.setEntirePath( Array( Array(30, 50), Array(30, 100) ) );

  newPath = newCompoundPath.pathItems.add();
  newPath.setEntirePath( Array( Array(40, 100), Array(100, 100) ) );

  newPath = newCompoundPath.pathItems.add();
  newPath.setEntirePath( Array( Array(100, 110), Array(100, 300) ) );

  // Set stroke and width properties of the compound path
  newPath.stroked = true;
  newPath.strokeWidth = 3.5;
  newPath.strokeColor = app.activeDocument.swatches[3].color;
}
```

# CompoundPathItems

A collection of `CompoundPathItem` objects.

## CompoundPathItem methods

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this collection (either a <code>Layer</code> or a <code>GroupItem</code> ).
<code>typename</code>	string	Read-only. The class name of the referenced object.

## CompoundPathItem methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">CompoundPathItem</a>	Creates a new <code>CompoundPathItem</code> .
<code>getName</code> (name)	string	<a href="#">CompoundPathItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">CompoundPathItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Counting compound paths

```
// Counts all compound path items in layer 1 of the current document

if ( app.documents.length > 0 ) {
    doc = app.activeDocument;
    numCompoundPaths = doc.layers[0].compoundPathItems.length;
}
```

## Dataset

A set of data used for dynamic publishing. A dataset allows you to collect a number of variables and their dynamic data into one object. You must have at least one variable bound to an art item in order to create a dataset. See the class [Variable](#).

### Dataset properties

Property	Value type	What is it
<code>name</code>	string	Then name of the dataset.
<code>parent</code>	<a href="#">Document</a>	Read-only. The name of the object that contains this dataset.
<code>typename</code>	string	Read-only. The class name of the referenced object.

### Dataset methods

Method	Parameter type	Returns	What it does
<code>display</code> <code>()</code>		Nothing	Displays the dataset.
<code>remove</code> <code>()</code>		Nothing	Deletes this object.
<code>update</code> <code>()</code>		Nothing	Updates the dataset.

### Using variables and datasets

```
// Creates two variables, 1 visibility and 1 text,
// creates two datasets each with different values
// for the variables, then displays both datasets

var docRef = documents.add();

// Create visibility variable
var itemRef = docRef.pathItems.rectangle(600, 200, 150, 150);
var colorRef = new RGBColor;
colorRef.red = 255;
itemRef.fillColor = colorRef;
var visibilityVar = docRef.variables.add();
visibilityVar.kind = VariableKind.VISIBILITY;
itemRef.visibilityVariable = visibilityVar;

// Create text variable
var textRef = docRef.textFrames.add();
textRef.contents = "Text Variable, dataset 1";
textRef.top = 400;
textRef.left = 200;
var textVar = docRef.variables.add();
textVar.kind = VariableKind.TEXTUAL;
```

```
textRef.contentVariable = textVar;
redraw();

// Create dataset 1
var ds1 = docRef.dataSets.add();

// Change variable values and create dataset 2
itemRef.hidden = true;
textRef.contents = "Text Variable, dataset 2";
redraw();
var ds2 = docRef.dataSets.add();

// display each dataset
ds1.display();
redraw();
ds2.display();
redraw();
```

# Datasets

A collection of `Dataset` objects.

## Datasets properties

Property	Value type	What is it
<code>length</code>	number	Read-only. The number of datasets in the collection
<code>parent</code>	<a href="#">Document</a>	Read-only. The name of the object that contains this dataset
<code>typename</code>	string	Read-only. Read-only. The class name of the referenced object.

## Datasets methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Dataset</a>	Creates a new dataset object.
<code>getByName</code> (name)	string	<a href="#">Dataset</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">Dataset</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Removes all elements in the collection.

# Document

An Illustrator document. Documents are contained in the `Application` object.

The default document settings—those properties starting with the word “default”—are global settings that affect the current document. Be sure to modify these default properties only when a document is open. Note that if you set default properties to desired values before creating new objects, you can streamline your scripts, eliminating the need to specify specific properties such as `fillColor` and `stroked` that have default properties.

A document’s color space, height, and width can only be set when the document is created. You cannot modify these properties in an existing document. See [Application.open](#) for more information on how document color spaces are handled.

## Document properties

Property	Value type	What it is
<code>activeDataset</code>	<a href="#">Dataset</a>	The currently opened dataset.
<code>activeLayer</code>	<a href="#">Layer</a>	The active layer in the document.
<code>activeView</code>	<a href="#">View</a>	Read-only. The document’s current view.
<code>artboards</code>	<a href="#">Artboards</a>	Read-only. All artboards in the document.
<code>brushes</code>	<a href="#">Brushes</a>	Read-only. The brushes contained in the document.
<code>characterStyles</code>	<a href="#">CharacterStyles</a>	Read-only. The list of character styles in this document.
<code>compoundPathItems</code>	<a href="#">CompoundPathItems</a>	Read-only. The compound path items contained in the document.
<code>cropBox</code>	array of 4 numbers	The boundary of the document’s cropping box for output, or <code>null</code> if no value has been set.
<code>cropStyle</code>	<a href="#">CropOptions</a>	The style of the document’s cropping box.
<code>dataSets</code>	<a href="#">Datasets</a>	Read-only. The datasets contained in the document.
<code>defaultFillColor</code>	<a href="#">Color</a>	The color to use to fill new paths if <code>defaultFilled</code> is <code>true</code> .
<code>defaultFilled</code>	boolean	If <code>true</code> , a new path should be filled.
<code>defaultFillOverprint</code>	boolean	If <code>true</code> , the art beneath a filled object should be overprinted by default.
<code>defaultStrokeCap</code>	<a href="#">StrokeCap</a>	Default type of line capping for paths created.
<code>defaultStrokeColor</code>	<a href="#">Color</a>	The stroke color for new paths if <code>defaultStroked</code> is <code>true</code> .
<code>defaultStroked</code>	boolean	If <code>true</code> , a new path should be stroked.

Property	Value type	What it is
<code>defaultStrokeDashes</code>	object	Default lengths for dashes and gaps in dashed lines, starting with the first dash length, followed by the first gap length, and so on. Set to an empty object, {}, for solid line.
<code>defaultStrokeDashOffset</code>	number (double)	The default distance into the dash pattern at which the pattern should be started for new paths.
<code>defaultStrokeJoin</code>	<a href="#">StrokeJoin</a>	Default type of joints in new paths.
<code>defaultStrokeMiterLimit</code>	number (double)	When a default stroke join is set to <code>mitered</code> , this property specifies when the join will be converted to beveled (squared-off) by default. The default miter limit of 4 means that when the length of the point reaches four times the stroke weight, the join switches from a miter join to a bevel join. Range: 1 to 500; a value of 1 specifies a bevel join.
<code>defaultStrokeOverprint</code>	boolean	If <code>true</code> , the art beneath a stroked object should be overprinted by default.
<code>defaultStrokeWidth</code>	number (double)	Default width of stroke for new paths.
<code>documentColorSpace</code>	<a href="#">DocumentColorSpace</a>	Read-only. The color specification system to use for this document's color space.
<code>fullName</code>	File	Read-only. The file associated with the document, which includes the complete path to the file.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the illustration excluding the stroke width of any objects in the document.
<code>gradients</code>	<a href="#">Gradients</a>	Read-only. The gradients contained in the document.
<code>graphicStyles</code>	<a href="#">GraphicStyles</a>	Read-only. The graphic styles defined in this document.
<code>graphItems</code>	<a href="#">GraphItems</a>	Read-only. The graph art items in this document.
<code>groupItems</code>	<a href="#">GroupItems</a>	Read-only. The group items contained in the document.
<code>height</code>	number (double)	Read-only. The height of the document.
<code>inkList</code>	object	Read-only. The list of inks in this document.
<code>kinsokuSet</code>	object	Read-only. The Kinsoku set of characters that cannot begin or end a line of Japanese text.

Property	Value type	What it is
<code>layers</code>	<a href="#">Layers</a>	Read-only. The layers contained in the document.
<code>legacyTextItems</code>	<a href="#">LegacyTextItems</a>	Read-only. The legacy text items in the document.
<code>meshItems</code>	<a href="#">MeshItems</a>	Read-only. The mesh art items contained in the document.
<code>mojikumiSet</code>	object	Read-only. A list of names of predefined Mojikumi sets which specify the spacing for the layout and composition of Japanese text.
<code>name</code>	string	Read-only. The document's name (not the complete file path to the document).
<code>nonNativeItems</code>	<a href="#">NonNativeItems</a>	Read-only. The non-native art items in this document.
<code>outputResolution</code>	number (double)	Read-only. The current output resolution for the document in dots per inch (dpi).
<code>pageItems</code>	<a href="#">PageItems</a>	Read-only. The page items (all art item classes) contained in the document.
<code>pageOrigin</code>	array of 2 numbers	The zero-point of the page in the document without margins, relative to the overall height and width.
<code>paragraphStyles</code>	<a href="#">ParagraphStyles</a>	Read-only. The list of paragraph styles in this document.
<code>parent</code>	<a href="#">Application</a>	Read-only. The application that contains this document.
<code>path</code>	File	Read-only. The file associated with the document, which includes the complete path to the file.
<code>pathItems</code>	<a href="#">PathItems</a>	Read-only. The path items contained in this document.
<code>patterns</code>	<a href="#">Patterns</a>	Read-only. The patterns contained in this document.
<code>placedItems</code>	<a href="#">PlacedItems</a>	Read-only. The placed items contained in this document.
<code>pluginItems</code>	<a href="#">PluginItems</a>	Read-only. The plug-in items contained in this document.
<code>printTiles</code>	boolean	Read-only. If <code>true</code> , this document should be printed as tiled output.
<code>rasterEffectSettings</code>	<a href="#">RasterEffectOptions</a>	The document's raster effect settings.

Property	Value type	What it is
<code>rasterItems</code>	<a href="#">RasterItems</a>	Read-only. The raster items contained in this document.
<code>rulerOrigin</code>	array of 2 numbers	The zero-point of the rulers in the document relative to the bottom left of the document.
<code>rulerUnits</code>	<a href="#">RulerUnits</a>	Read-only. The default measurement units for the rulers in the document.
<code>saved</code>	boolean	If <code>true</code> , the document has not been changed since last time it was saved.
<code>selection</code>	array of objects	References to the objects in this document's current selection, or <code>null</code> when nothing is selected.  A reference to an insertion point is returned when there is an active insertion point in the contents of a selected text art item. Similarly, a reference to a range of text is returned when characters are selected in the contents of a text art item.
<code>showPlacedImages</code>	boolean	Read-only. If <code>true</code> , placed images should be displayed in the document.
<code>splitLongPaths</code>	boolean	Read-only. If <code>true</code> , long paths should be split when printing.
<code>spots</code>	<a href="#">Spots</a>	Read-only. The spot colors contained in this document.
<code>stationery</code>	boolean	Read-only. If <code>true</code> , the file is a stationery file.
<code>stories</code>	<a href="#">Stories</a>	Read-only. The story items in this document.
<code>swatches</code>	<a href="#">Swatches</a>	Read-only. The swatches in this document.
<code>swatchGroups</code>	<a href="#">SwatchGroups</a>	Read-only. The swatch groups in this document.
<code>symbolItems</code>	<a href="#">SymbolItems</a>	Read-only. The art items in the document linked to symbols.
<code>symbols</code>	<a href="#">Symbols</a>	Read-only. The symbols in this document.
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags in this document.
<code>textFrames</code>	<a href="#">TextFrameItems</a>	Read-only. The text frames in this document.
<code>tileFullPages</code>	boolean	Read-only. If <code>true</code> , full pages should be tiled when printing this document.
<code>typename</code>	string	Read-only. Read-only. The class name of the referenced object.

Property	Value type	What it is
<code>useDefaultScreen</code>	boolean	Read-only. If <code>true</code> , the printer's default screen should be used when printing this document.
<code>variables</code>	<a href="#">Variables</a>	Read-only. The variables defined in this document.
<code>variablesLocked</code>	boolean	If <code>true</code> , the variables are locked.
<code>views</code>	<a href="#">Views</a>	Read-only. The views contained in this document.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the document, including stroke width of any objects in the illustration.
<code>width</code>	number (double)	Read-only. The width of this document.
<code>XMPString</code>	string	The XMP metadata packet associated with this document.

## Document methods

Method	Parameter type	Returns	What it does
<code>activate</code> ( )		Nothing	Brings the first window associated with the document to the front.
<code>arrange</code> ([layoutStyle])	<a href="#">DocumentLayoutStyle</a>	Boolean	Arranges multiple documents in the given layout style.
<code>close</code> ([saveOptions])	<a href="#">SaveOptions</a>	Nothing	Closes a document using specified save options.  When you close a document, you should set your document reference to <code>null</code> to prevent your script from accidentally trying to access closed documents.
<code>convertCoordinate</code> (coordinate, source, destination)	Point <a href="#">CoordinateSystem</a> <a href="#">CoordinateSystem</a>	Point	Converts the given point between artboard and document coordinate systems. Returns the converted point coordinates.

Method	Parameter type	Returns	What it does
<b>exportFile</b> (exportFile, exportFormat [,options])	File <a href="#">ExportType</a> variant	Nothing	Exports the document to the specified file using one of the predefined export file formats. The appropriate file extension is automatically appended to the file name, except for Photoshop® documents. For these, you must include the file extension (PSD) in the file specification.
<b>exportPDFPreset</b> (file)	File	Nothing	Exports the current PDF preset values to the file.
<b>exportPerspectiveGridPreset</b> (file)	File	Nothing	Exports the current perspective grid preset values to the file.
<b>exportPrintPreset</b> (file)	File	Nothing	Exports the current print preset values to the file.
<b>exportVariables</b> (fileSpec)	File	Nothing	Saves datasets into an XML library. The datasets contain variables and their associated dynamic data.
<b>fitArtboardToSelectedArt</b> ([index])	number (long)	boolean	Resizes the artboard at the given index to fit currently selected art. Index default is 0. Returns <code>true</code> on success.
<b>getPerspectiveActivePlane</b> ( )		<a href="#">Perspective GridPlaneType</a>	Retrieves the active plane of the active perspective grid of the document.
<b>hidePerspectiveGrid</b> ( )		boolean	Hides the current active grid for the document. If no grid is visible, does nothing. Returns <code>true</code> if a grid is hidden.
<b>imageCapture</b> (imageFile, [clipBounds], [options])	File Rect <a href="#">ImageCaptureOptions</a>	Nothing	Captures the artwork content within the clipping boundaries in this document as a raster image, and writes the image data to a specified file.  If the bounds parameter is omitted, captures the entire artwork.
<b>importCharacterStyles</b> (fileSpec)	File	Nothing	Loads the character styles from the Illustrator file.

Method	Parameter type	Returns	What it does
<b>importParagraphStyles</b> (fileSpec)	File	Nothing	Loads the paragraph styles from the Illustrator file.
<b>importPDFPreset</b> (fileSpec [, replacingPreset])	File boolean	Nothing	Loads all PDF presets from a file.
<b>importPerspectiveGridPreset</b> (fileSpec [, perspectivePreset])	File String	Nothing	Loads a specified perspective grid preset, or, if preset not specified, all presets from a file.
<b>importPrintPreset</b> (printPreset, fileSpec)	string File	Nothing	Loads the named print preset from the file.
<b>importVariables</b> (fileSpec)	File	Nothing	Imports a library containing datasets, variables, and their associated dynamic data. Importing variables overwrites existing variables and datasets.
<b>print</b> ([options])	<a href="#">PrintOptions</a>	Nothing	Prints the document.
<b>rasterize</b> (sourceArt [, clipBounds] [, options])	variant Rect <a href="#">RasterizeOptions</a>	<a href="#">RasterItem</a>	Rasterizes the source art(s) within the specified clip bounds. The source art(s) is disposed of as a result of the rasterization.
<b>rearrangeArboards</b> ([artboardLayout, artboardRowsOrCols, artboardSpacing, artboardMoveArtwork])	<a href="#">DocumentArtboardLayout</a> integer Number boolean	boolean	<p>Rearranges artboards in the document. All arguments are optional. Default layout style is <code>DocumentArtboardLayout.GridByRow</code>.</p> <p>The second argument specifies the number of rows or columns, as appropriate for the chosen layout style, in the range <code>[1..docNumArtboards-1]</code>, or 1 (the default) for single row/column layouts.</p> <p>Spacing is a number of pixels, default 20.</p> <p>When last argument is true (the default), artwork is moved with the artboards.</p>

Method	Parameter type	Returns	What it does
<code>save</code> ( )		Nothing	Saves the document in its current location.
<code>saveAs</code> (saveIn [, options])	File <a href="#">SaveOptions</a>	Nothing	Saves the document in the specified file as an Illustrator, EPS, or PDF file.
<code>selectObjectsOnActiveArtboard</code> ( )		boolean	Selects the objects on the currently active artboard. Returns <code>true</code> on success.
<code>setActivePlane</code> (gridPlane)	<a href="#">PerspectiveGridPlaneType</a>	boolean	Sets the active plane of the active perspective grid of the document. Returns <code>true</code> on success.
<code>selectPerspectivePreset</code> (gridType, presetName)	<a href="#">PerspectiveGridType</a> string	boolean	Selects a predefined preset to define grid for the current document. Returns <code>true</code> on success.
<code>showPerspectiveGrid</code> ( )		boolean	Shows the current active grid for the document, or if no grid is active, shows the default grid. Returns <code>true</code> on success.
<code>windowCapture</code> (imageFile, windowSize)	File array of 2 numbers	Nothing	Captures the current document window to the target TIFF image file.

## Deselecting all objects in the current document

The frontmost document can be referred to as either `activeDocument` or `documents[0]`.

```
var docRef = activeDocument;
docRef.selection = null;
```

## Closing a document

```
// Closes the active document without saving changes

if ( app.documents.length > 0 ) {
    aiDocument = app.activeDocument;
    aiDocument.close( SaveOptions.DONOTSAVECHANGES );
    aiDocument = null;
}
```

## Creating a document with defaults

```
// Creates a new document if none exists
```

```
// then sets fill and stroke defaults to true

if ( app.documents.length == 0 ) {
    doc = app.documents.add();
}
else {
    doc = app.activeDocument;
}
doc.defaultFilled = true;
doc.defaultStroked = true;
```

# DocumentPreset

A preset document template to use when creating a new document. See [Documents.addDocument\(\)](#).

## DocumentPreset properties

Property	Value type	What it is
<code>artboardLayout</code>	<a href="#">DocumentArtboardLayout</a>	The layout of artboards in the new document. Default: <code>GridByRow</code>
<code>artboardRowsOrCols</code>	number (long)	The number of rows (for rows layout) or columns (for column layout) of artboards. Range: 1 to <code>(numArtboards - 1)</code> or 1 for single row or column layouts. Default: 1
<code>artboardSpacing</code>	number (double)	The spacing between artboards in the new document. Default: 20.0
<code>colorMode</code>	<a href="#">DocumentColorSpace</a>	The color space for the new document.
<code>height</code>	number (double)	The height in document points. Default: 792.0
<code>numArtboards</code>	number (long)	The number of artboards for the new document. Range: 1 to 100. Default: 1
<code>previewMode</code>	<a href="#">DocumentPreviewMode</a>	The preview mode for the new document.
<code>rasterResolution</code>	<a href="#">DocumentRasterResolution</a>	The raster resolution for the new document.
<code>title</code>	string	The document title.
<code>transparencyGrid</code>	<a href="#">DocumentTransparencyGrid</a>	The transparency grid color for the new document.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>units</code>	<a href="#">RulerUnits</a>	The ruler units for the new document.
<code>width</code>	number (double)	The width in document points. Default: 612.0

# Documents

A collection of `Document` objects.

## Documents properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. The number of objects in the collection.
<code>parent</code>	<code>object</code>	Read-only. The parent of this object.
<code>typename</code>	<code>string</code>	Read-only. The class name of the referenced object.

## Documents methods

Method	Parameter type	Returns	What it does
<code>add</code> ( [documentColorSpace] [, width] [, height] [, numArtBoards] [, artboardLayout] [, artboardSpacing] [, artboardRowsOrCols] )	<a href="#">DocumentColorSpace</a> <code>number (double)</code> <code>number (double)</code> <code>number (long)</code> <a href="#">DocumentArtboardLayout</a> <code>number (double)</code> <code>number (long)</code>	<a href="#">Document</a>	Creates a new document using optional parameters and returns a reference to the new document.
<code>addDocument</code> ( startupPreset [, presetSettings] [, showOptionsDialog] )	<code>string</code> <a href="#">DocumentPreset</a> <code>boolean</code>	<a href="#">Document</a>	Creates a document from the preset, replacing any provided setting values, and returns a reference to the new document.
<code>getByName</code> ( name )	<code>string</code>	<a href="#">Document</a>	Gets the first element in the collection with the specified name.
<code>index</code> ( itemKey )	<code>string, number</code>	<a href="#">Document</a>	Gets an element from the collection.

## Creating a new document

```
// Creates a new document with an RGB color space
app.documents.add( DocumentColorSpace.RGB );
```

# EPSSaveOptions

Options for saving a document as an Illustrator EPS file, used with the [saveAs](#) method. All properties are optional.

## EPSSaveOptions properties

Property	Value type	What it is
<code>artboardRange</code>	string	If <code>saveMultipleArtboards</code> is <code>true</code> , this is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<code>cmykPostScript</code>	boolean	If <code>true</code> , use CMYK PostScript.
<code>compatibility</code>	<a href="#">Compatibility</a>	Specifies the version of the EPS file format to save. Default: <code>Compatibility.ILLUSTRATOR17</code>
<code>compatibleGradientPrinting</code>	boolean	If <code>true</code> , create a raster item of the gradient or gradient mesh so that PostScript Level 2 printers can print the object. Default: <code>false</code>
<code>embedAllFonts</code>	boolean	If <code>true</code> , all fonts used by the document should be embedded in the saved file (version 7 or later). Default: <code>false</code>
<code>embedLinkedFiles</code>	boolean	If <code>true</code> , linked image files are to be included in the saved document.
<code>flattenOutput</code>	<a href="#">OutputFlattening</a>	How should transparency be flattened for file formats older than Illustrator 9.
<code>includeDocumentThumbnails</code>	boolean	If <code>true</code> , thumbnail image of the EPS artwork should be included.
<code>overprint</code>	<a href="#">PDFOverprint</a>	Whether to preserve, discard, or simulate the overprint. Default: <code>PDFOverprint.PRESERVEPDFOVERPRINT</code>
<code>postScript</code>	<a href="#">EPSPostScriptLevelEnum</a>	PostScript Language Level to use (Level 1 valid for file format version 8 or older). Default: <code>EPSPostScriptLevelEnum.LEVEL2</code>
<code>preview</code>	<a href="#">EPSPreview</a>	The format for the EPS preview image.
<code>saveMultipleArtboards</code>	boolean	If <code>true</code> , all artboards or range of artboards are saved. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Exporting to EPS format

```
// Exports current document to destFile as an EPS file with specified
// options, destFile contains the full path including the file name

function exportFileAsEPS (destFile) {
  var newFile = new File(destFile);
  var saveDoc;
  if ( app.documents.length == 0 )
    saveDoc = app.documents.add();
  else
    saveDoc = app.activeDocument;
  var saveOpts = new EPSSaveOptions();
  saveOpts.cmykPostScript = true;
  saveOpts.embedAllFonts = true;
  saveDoc.saveAs( newFile, saveOpts );
}
```

## ExportOptionsAutoCAD

Options for exporting a document as an AutoCAD file, used with the [exportFile](#) method. All properties are optional.

When you export a document, a file extension is appended automatically. You should not include any file extension in the file specification. To override the default AutoCAD export format (DWG), use the [exportFileFormat](#) property.

### ExportOptionsAutoCAD properties

Property	Value type	What it is
<code>alterPathsForAppearance</code>	boolean	If <code>true</code> , paths are altered if needed to maintain appearance. Default: <code>false</code>
<code>colors</code>	<a href="#">AutoCADColors</a>	The colors exported into the AutoCAD file.
<code>convertTextToOutlines</code>	boolean	If <code>true</code> , text is converted to vector paths; preserves the visual appearance of type. Default: <code>false</code>
<code>exportFileFormat</code>	<a href="#">AutoCADExportFileFormat</a>	The format to which the file is exported. Default: <code>AutoCADExportFileFormat.DWG</code>
<code>exportOption</code>	<a href="#">AutoCADExportOption</a>	Specifies whether to preserve appearance or editability during export. Default: <code>AutoCADExportOption.MaximizeEditability</code>
<code>exportSelectedArtOnly</code>	boolean	If <code>true</code> , only selected artwork is exported. Default: <code>false</code>
<code>rasterFormat</code>	<a href="#">AutoCADRasterFormat</a>	The format in which raster art is exported.
<code>scaleLineweights</code>	boolean	If <code>true</code> , line weights are scaled by the same scaling factor as the rest of the drawing. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>unit</code>	<a href="#">AutoCADUnit</a>	The measurement units from which to map.

Property	Value type	What it is
<code>unitScaleRatio</code>	number (double)	The ratio (as a percentage) by which output is scaled. Range: 0 to 1000
<code>version</code>	<a href="#">AutoCADCompatibility</a>	The release of AutoCAD to which the file is exported. Default: <code>AutoCADCompatibility.AutoCADRelease24</code>

# ExportOptionsFlash

Options for exporting a document as a Macromedia® Flash® (SWF) file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

## ExportOptionsFlash properties

Property	Value type	What it is
<code>artClipping</code>	<a href="#">ArtClippingOption</a>	How the art should be clipped during output. Default: <code>ArtClippingOption.OUTPUTARTBOUNDS</code>
<code>artboardRange</code>	string	If <code>saveMultipleArtboards</code> is <code>true</code> , this is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<code>backgroundColor</code>	<a href="#">RGBColor</a>	The background color of the exported Flash frames.
<code>backgroundLayers</code>	array of <a href="#">Layer</a>	A list of layers to be included as the static background of the exported Flash frames.
<code>blendAnimation</code>	<a href="#">BlendAnimationType</a>	The animation type for blended objects. Default: <code>BlendAnimationType.NOBLENDANIMATION</code>
<code>compressed</code>	boolean	If <code>true</code> , the exported file should be exported compressed. Default: <code>false</code>
<code>convertTextToOutlines</code>	boolean	If <code>true</code> , all text is converted to vector paths; preserves the visual appearance of type in all Flash players. Default: <code>false</code>
<code>curveQuality</code>	number (long)	The amount of curve information that should be presented. Default: 7
<code>exportAllSymbols</code>	boolean	If <code>true</code> , export all symbols defined in the palette. Default: <code>false</code>
<code>exportStyle</code>	<a href="#">FlashExportStyle</a>	The style in which the exported data should be created in Flash. Default: <code>FlashExportStyle.ASFLASHFILE</code>
<code>exportVersion</code>	<a href="#">FlashExportVersion</a>	The version of the exported SWF file. Default: <code>FlashExportVersion.FlashVersion9</code> .
<code>frameRate</code>	number (double)	The display rate in frames per second. Range: 0.01–120.0. Default: 12.0
<code>ignoreTextKerning</code>	boolean	If <code>true</code> , ignore kerning information in text objects. Default: <code>false</code>

Property	Value type	What it is
<code>imageFormat</code>	<a href="#">FlashImageFormat</a>	How should the image in the exported Flash file be compressed. Default: <code>FlashImageFormat.LOSSLESS</code>
<code>includeMetadata</code>	boolean	If <code>true</code> , include minimal XMP metadata in the SWF file. Default: <code>false</code>
<code>jpegMethod</code>	<a href="#">FlashJPEGMethod</a>	Specifies the JPEG method to use. Default: <code>FlashJPEGMethod.Standard</code>
<code>jpegQuality</code>	number (long)	Level of compression to use. Range 1 to 10. Default: 3
<code>layerOrder</code>	<a href="#">LayerOrderType</a>	The order in which layers are exported to Flash frames. Default: <code>LayerOrderType.BOTTOMUP</code>
<code>looping</code>	boolean	If <code>true</code> , the Flash file is set to loop when run. Default: <code>false</code>
<code>playbackAccess</code>	<a href="#">FlashPlaybackSecurity</a>	The access level for the exported SWF file. Default: <code>FlashPlaybackSecurity.PlaybackLocal</code>
<code>preserveAppearance</code>	boolean	If <code>true</code> , preserve appearance. If <code>false</code> , preserve editability. Default: <code>false</code>
<code>readOnly</code>	boolean	If <code>true</code> , export as read-only file. Default: <code>false</code>
<code>replacing</code>	<a href="#">SaveOptions</a>	If a file with the same name already exists, should it be replaced. Default: <code>SaveOptions.PROMPTTOSAVECHANGES</code>
<code>resolution</code>	number (double)	The resolution in pixels per inch. Range: 72–2400. Default: 72
<code>saveMultipleArtboards</code>	boolean	If <code>true</code> , all artboards or range of artboards are saved. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Exporting to Flash format

```
// Exports current document to destFile as a flash file with specified
// options, destFile contains the full path including the file name

function exportToFlashFile(destFile) {
    if ( app.documents.length > 0 ) {
        var exportOptions = new ExportOptionsFlash();
        var type = ExportType.FLASH;
        var fileSpec = new File(destFile);
        exportOptions.resolution = 150;
        app.activeDocument.exportFile( fileSpec, type, exportOptions );
    }
}
```

# ExportOptionsGIF

Options for exporting a document as a GIF file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

## ExportOptionsGIF properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the exported image should be anti-aliased. Default: <code>true</code>
<b>artBoardClipping</b>	boolean	If <code>true</code> , the exported image should be clipped to the art board. Default: <code>false</code>
<b>colorCount</b>	number (long)	The number of colors in the exported image's color table. Range: 2 to 256. Default: 128
<b>colorDither</b>	<a href="#">ColorDitherMethod</a>	The method used to dither colors in the exported image. Default: <code>ColorDitherMethod.DIFFUSION</code>
<b>colorReduction</b>	<a href="#">ColorReductionMethod</a>	The method used to reduce the number of colors in the exported image. Default: <code>ColorReductionMethod.SELECTIVE</code>
<b>ditherPercent</b>	number (long)	How much should the colors of the exported image be dithered, where 100.0 is 100%.
<b>horizontalScale</b>	number (double)	The horizontal scaling factor to apply to the exported image, where 100.0 is 100%. Default: 100.0
<b>infoLossPercent</b>	number (long)	The level of information loss allowed during compression, where 100.0 is 100%.
<b>interlaced</b>	boolean	If <code>true</code> , the exported image should be interlaced. Default: <code>false</code>
<b>matte</b>	boolean	If <code>true</code> , the art board should be matted with a color. Default: <code>true</code>
<b>matteColor</b>	<a href="#">RGBColor</a>	The color to use when matting the art board. Default: <code>WHITE</code>
<b>saveAsHTML</b>	boolean	If <code>true</code> , the exported image should be saved with an accompanying HTML file. Default: <code>false</code>
<b>transparency</b>	boolean	If <code>true</code> , the exported image should use transparency. Default: <code>true</code>
<b>typename</b>	string	Read-only. The class name of the referenced object.

Property	Value type	What it is
<code>verticalScale</code>	number (double)	The vertical scaling factor to apply to the exported image, where 100.0 is 100%. Default: 100.0
<code>webSnap</code>	number (long)	How much should the color table be changed to match the web palette, where 100 is maximum. Default: 0

## Exporting to GIF format

```
// Exports current document to dest as a GIF file with specified
// options, dest contains the full path including the file name

function exportToGIFFile(dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsGIF();
    var type = ExportType.GIF;
    var fileSpec = new File(dest);

    exportOptions.antiAliasing = false;
    exportOptions.colorCount = 64;
    exportOptions.colorDither = ColorDitherMethod.DIFFUSION;

    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

## ExportOptionsJPEG

Options for exporting a document as a JPEG file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

### ExportOptionsJPEG properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the exported image should be anti-aliased. Default: <code>true</code>
<b>artBoardClipping</b>	boolean	If <code>true</code> , the exported image should be clipped to the art board.
<b>blurAmount</b>	number (double)	The amount of blur to apply to the exported image. Range: 0.0 to 2.0. Default: 0.0
<b>horizontalScale</b>	number (double)	The horizontal scaling factor to apply to the exported image, where 100.0 is 100%. Default: 100.0
<b>matte</b>	boolean	If <code>true</code> , the art board should be matted with a color. Default: <code>true</code>
<b>matteColor</b>	<a href="#">RGBColor</a>	The color to use when matting the art board. Default: <code>white</code>
<b>optimization</b>	boolean	If <code>true</code> , the exported image should be optimized for web viewing. Default: <code>true</code>
<b>qualitySetting</b>	number (long)	The quality of the exported image. Range: 0 to 100. Default: 30
<b>saveAsHTML</b>	boolean	If <code>true</code> , the exported image should be saved with an accompanying HTML file. Default: <code>false</code>
<b>typename</b>	string	Read-only. The class name of the referenced object.
<b>verticalScale</b>	number (double)	The vertical scaling factor to apply to the exported image. Range: 0.0 to 776.19. Default: 100.0

## Exporting to JPEG format

```
// Exports current document to dest as a JPEG file with specified
// options, dest contains the full path including the file name

function exportFileToJPEG (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsJPEG();
    var type = ExportType.JPEG;
    var fileSpec = new File(dest);
    exportOptions.antiAliasing = false;
    exportOptions.qualitySetting = 70;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

# ExportOptionsPhotoshop

Options for exporting a document as a Photoshop file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

## ExportOptionsPhotoshop properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the exported image should be anti-aliased. Default: <code>true</code>
<b>artboardRange</b>	string	If <code>saveMultipleArtboards</code> is <code>true</code> , this is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<b>editableText</b>	boolean	If <code>true</code> , text objects should be exported as editable text layers. Default: <code>true</code>
<b>embedICCProfile</b>	boolean	If <code>true</code> , an ICC profile should be embedded in the exported file. Default: <code>false</code>
<b>imageColorSpace</b>	<a href="#">ImageColorSpace</a>	The color space of the exported file. Default: <code>ImageColorSpace.RGB</code>
<b>maximumEditability</b>	boolean	Preserve as much of the original document's structure as possible when exporting. Default: <code>true</code>
<b>resolution</b>	number (double)	Resolution of the exported file in dots per inch (dpi). Range: 72.0 to 2400.0. Default: 150.0
<b>saveMultipleArtboards</b>	boolean	If <code>true</code> , all artboards or range of artboards are saved. Default: <code>false</code>
<b>typename</b>	string	Read-only. The class name of the referenced object.
<b>warnings</b>	boolean	If <code>true</code> , a warning dialog should be displayed in case of conflicts in the export settings. Default: <code>true</code>
<b>writeLayers</b>	boolean	If <code>true</code> , the document layers should be presented in the exported document. Default: <code>true</code>

## Exporting to Photoshop format

```
// Exports current document to dest as a PSD file with specified
// options, dest contains the full path including the file name

function exportFileToPSD (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsPhotoshop();
    var type = ExportType.PHOTOSHOP;
    var fileSpec = new File(dest);
    exportOptions.resolution = 150;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

## ExportOptionsPNG8

Options for exporting a document as an 8-bit PNG file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

### ExportOptionsPNG8 properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the exported image should be anti-aliased. Default: <code>true</code>
<b>artBoardClipping</b>	boolean	If <code>true</code> , the exported image should be clipped to the art board. Default: <code>false</code>
<b>colorCount</b>	number (long)	The number of colors in the exported image's color table. Range: 2 to 256. Default: 128
<b>colorDither</b>	<a href="#">ColorDitherMethod</a>	The method used to dither colors in the exported image. Default: <code>ColorDitherMethod.Diffusion</code>
<b>colorReduction</b>	<a href="#">ColorReductionMethod</a>	The method used to reduce the number of colors in the exported image. Default: <code>ColorReductionMethod.SELECTIVE</code>
<b>ditherPercent</b>	number (long)	The amount (as a percentage) that the colors of the exported image are dithered, where 100.0 is 100%. Range: 0 to 100. Default: 88
<b>horizontalScale</b>	number (double)	The horizontal scaling factor to apply to the exported image, where 100.0 is 100%. Default: 100.0
<b>interlaced</b>	boolean	If <code>true</code> , the exported image should be interlaced. Default: <code>false</code>
<b>matte</b>	boolean	If <code>true</code> , the art board should be matted with a color. Default: <code>true</code>
<b>matteColor</b>	<a href="#">RGBColor</a>	The color to use when matting the art board. Default: <code>white</code>
<b>saveAsHTML</b>	boolean	If <code>true</code> , the exported image be saved with an accompanying HTML file. Default: <code>false</code>
<b>transparency</b>	boolean	If <code>true</code> , the exported image use transparency. Default: <code>true</code>
<b>typename</b>	string	Read-only. The class name of the referenced object.

Property	Value type	What it is
<code>verticalScale</code>	number (double)	The vertical scaling factor to apply to the exported image, where 100.0 is 100. Default: 100.0
<code>webSnap</code>	number (long)	Specifies how much the color table should be changed to match the web palette, where 100 is maximum. Default: 0

## Exporting to PNG8 format

```
// Exports current document to dest as a PNG8 file with specified
// options, dest contains the full path including the file name

function exportFileToPNG8 (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsPNG8();
    var type = ExportType.PNG8;
    var fileSpec = new File(dest);
    exportOptions.colorCount = 8;
    exportOptions.transparency = false;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

## ExportOptionsPNG24

Options for exporting a document as a 24-bit PNG file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

### ExportOptionsPNG24 properties

Property	Value type	What it is
<code>antiAliasing</code>	boolean	If <code>true</code> , the exported image be anti-aliased. Default: <code>true</code>
<code>artBoardClipping</code>	boolean	If <code>true</code> , the exported image be clipped to the art board. Default: <code>false</code>
<code>horizontalScale</code>	number (double)	The horizontal scaling factor to apply to the exported image, where 100.0 is 100%. Default: 100.0
<code>matte</code>	boolean	If <code>true</code> , the art board be matted with a color. Default: <code>true</code>
<code>matteColor</code>	<a href="#">RGBColor</a>	The color to use when matting the art board. Default: <code>white</code>
<code>saveAsHTML</code>	boolean	If <code>true</code> , the exported image be saved with an accompanying HTML file. Default: <code>false</code>
<code>transparency</code>	boolean	If <code>true</code> , the exported image use transparency. Default: <code>true</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>verticalScale</code>	number (double)	The vertical scaling factor to apply to the exported image, where 100.0 is 100. Default: 100.0

### Exporting to PNG24 format

```
// Exports current document to dest as a PNG24 file with specified
// options, dest contains the full path including the file name, saveAsHTML
// option creates an HTML version with the PNG file in an images folder

function exportFileToPNG24 (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsPNG24();
    var type = ExportType.PNG24;
    var fileSpec = new File(dest);
    exportOptions.antiAliasing = false;
    exportOptions.transparency = false;
    exportOptions.saveAsHTML = true;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

# ExportOptionsSVG

Options for exporting a document as a SVG file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

## ExportOptionsSVG properties

Property	Value type	What it is
<code>artboardRange</code>	string	A range of artboards to save, if <code>saveMultipleArtboards</code> is <code>true</code> . A comma-delimited list of artboard names, or the empty string to save all artboards. Default: empty string
<code>compressed</code>	boolean	If <code>true</code> , the exported file should be compressed. Default: <code>false</code>
<code>coordinatePrecision</code>	number (long)	The decimal precision for element coordinate values. Range: 1 to 7. Default: 3
<code>cssProperties</code>	<a href="#">SVGCSSTypeLocation</a>	How the CSS properties of the document should be included in the exported file. Default: <code>SVGCSSTypeLocation.STYLEATTRIBUTES</code>
<code>documentEncoding</code>	<a href="#">SVGDocumentEncoding</a>	How the text in the document should be encoded. Default: <code>SVGDocumentEncoding.ASCII</code>
<code>DTD</code>	<a href="#">SVGDTDVersion</a>	The SVG version to which the file should conform. Default: <code>SVGDTDVersion.SVG1_1</code>
<code>embedRasterImages</code>	boolean	If <code>true</code> , the raster images contained in the document should be embedded in the exported file. Default: <code>false</code>
<code>fontSubsetting</code>	<a href="#">SVGFontSubsetting</a>	Which font glyphs should be included in the exported file. Default: <code>SVGFontSubsetting.ALLGLYPHS</code>
<code>fontType</code>	<a href="#">SVGFontType</a>	The type of font to included in the exported file. Default: <code>SVGFontType.CEFFONT</code>
<code>includeFileInfo</code>	boolean	If <code>true</code> , file information should be saved in the exported file. Default: <code>false</code>

Property	Value type	What it is
<code>includeUnusedStyles</code>	boolean	If <code>true</code> , save unused styles in the exported file. Default: <code>false</code>
<code>includeVariablesAndDatasets</code>	boolean	If <code>true</code> , variables and datasets should be saved in the exported file. Default: <code>false</code>
<code>optimizeForSVGViewer</code>	boolean	If <code>true</code> , the exported file should be optimized for the SVG Viewer. Default: <code>false</code>
<code>preserveEditability</code>	boolean	If <code>true</code> , Illustrator editing capabilities should be preserved when exporting the document. Default: <code>false</code>
<code>saveMultipleArtboards</code>	boolean	If <code>true</code> , save the artboards specified by <code>artboardRange</code> in the exported file. Default: <code>false</code>
<code>slices</code>	boolean	If <code>true</code> , slice data should be exported with the file. Default: <code>false</code>
<code>SVGAutoKerning</code>	boolean	If <code>true</code> , SVG automatic kerning is allowed in the file. Default: <code>false</code>
<code>SVGTextOnPath</code>	boolean	If <code>true</code> , the SVG <code>text-on-path</code> construct is allowed in the file. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Exporting to SVG format

```
// Exports current document to dest as an SVG file with specified
// options, dest contains the full path including the file name

function exportFileToSVG (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsSVG();
    var type = ExportType.SVG;
    var fileSpec = new File(dest);
    exportOptions.embedRasterImages = true;
    exportOptions.embedAllFonts = false;
    exportOptions.fontSubsetting = SVGFontSubsetting.GLYPHSUSED;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

## ExportOptionsTIFF

Options for exporting a document as a TIFF file, used with the [exportFile](#) method. All properties are optional.

When you export a document, the appropriate file extension is appended automatically. You should not include any file extension in the file specification.

### ExportOptionsTIFF properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the exported image should be anti-aliased. Default: <code>true</code>
<b>artboardRange</b>	string	If <code>saveMultipleArtboards</code> is <code>true</code> , this is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<b>byteOrder</b>	<a href="#">TIFFByteOrder</a>	The byte order to use in the new file.
<b>imageColorSpace</b>	<a href="#">ImageColorSpace</a>	The color space of the exported file. Default: <code>ImageColorSpace.RGB</code>
<b>IZWCompression</b>	boolean	If <code>true</code> , use IZW compression in the new file.
<b>resolution</b>	number (double)	Resolution of the exported file in dots per inch (dpi). Range: 72.0 to 2400.0. Default: 150.0
<b>saveMultipleArtboards</b>	boolean	If <code>true</code> , all artboards or range of artboards are saved. Default: <code>false</code>

### Exporting to TIFF format

```
// Exports current document to dest as a TIFF file with specified
// options, dest contains the full path including the file name

function exportFileToPSD (dest) {
  if ( app.documents.length > 0 ) {
    var exportOptions = new ExportOptionsTIFF();
    var type = ExportType.TIFF;
    var fileSpec = new File(dest);
    exportOptions.resolution = 150;
    exportOptions.byteOrder = TIFFByteOrder.IBMPC;
    exportOptions.IZWCompression = false;
    app.activeDocument.exportFile( fileSpec, type, exportOptions );
  }
}
```

# FXGSaveOptions

Specifies options which may be supplied when saving a document as an FXG file. All properties are optional.

## FXGSaveOptions properties

Property	Value type	What it is
<code>artboardRange</code>	string	If <code>saveMultipleArtboards</code> is <code>true</code> , this is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<code>blendsPolicy</code>	<a href="#">BlendsExpandPolicy</a>	The policy used by FXG to expand blends. Default: <code>BlendsExpandPolicy.AUTOMATICALLYCONVERTBLEND</code>
<code>downsampleLinkedImages</code>	boolean	If <code>true</code> , linked images are downsampled (at 72 dpi). Default: <code>false</code>
<code>filtersPolicy</code>	<a href="#">FiltersPreservePolicy</a>	The policy used by FXG to preserve filters. Default: <code>FiltersPreservePolicy.KEEPFILTERSE</code>
<code>gradientsPolicy</code>	<a href="#">GradientsPreservePolicy</a>	The policy used by FXG to preserve gradients. Default: <code>GradientsPreservePolicy.AUTOMATICALLYCONVERTGRADIENTS</code>
<code>includeUnusedSymbols</code>	boolean	If <code>true</code> , unused symbols are included. Default: <code>false</code>
<code>preserveEditingCapabilities</code>	boolean	If <code>true</code> , the editing capabilities of FXG are preserved. Default: <code>true</code>
<code>saveMultipleArtboards</code>	boolean	If <code>true</code> , all artboards or range of artboards are saved. Default: <code>false</code>
<code>textPolicy</code>	<a href="#">TextPreservePolicy</a>	The policy used by FXG to preserve text. Default: <code>TextPreservePolicy.AUTOMATICALLYCONVERTTEXT</code>
<code>version</code>	<a href="#">FXGVersion</a>	The version of the FXG file format to create. Default: <code>FXGVersion.VERSION2PT0</code>

# Gradient

A gradient definition contained in a document. Scripts can create new gradients.

## Gradient properties

Property	Value type	What it is
<code>gradientStops</code>	<a href="#">GradientStops</a>	Read-only. The gradient stops contained in this gradient.
<code>name</code>	string	The gradient's name.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this gradient.
<code>type</code>	<a href="#">GradientType</a>	The kind of the gradient, either radial or linear.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Gradient methods

Method	Parameter type	Returns	What it does
<code>remove()</code>		Nothing	Removes the referenced object from the document.

## Creating and applying a gradient

```
// Creates a new gradient in current document then
// applies the gradient to the frontmost path item

if ( app.documents.length > 0 ) {
    // Create a color for both ends of the gradient
    var startColor = new RGBColor();
    var endColor = new RGBColor();

    startColor.red = 0;
    startColor.green = 100;
    startColor.blue = 255;
    endColor.red = 220;
    endColor.green = 0;
    endColor.blue = 100;

    // Create a new gradient
    // A new gradient always has 2 stops
    var newGradient = app.activeDocument.gradients.add();
    newGradient.name = "NewGradient";
    newGradient.type = GradientType.LINEAR;

    // Modify the first gradient stop
    newGradient.gradientStops[0].rampPoint = 30;
    newGradient.gradientStops[0].midPoint = 60;
    newGradient.gradientStops[0].color = startColor;
}
```

```
// Modify the last gradient stop
newGradient.gradientStops[1].rampPoint = 80;
newGradient.gradientStops[1].color = endColor;

// construct an Illustrator.GradientColor object referring to the
// newly created gradient
var colorOfGradient = new GradientColor();
colorOfGradient.gradient = newGradient;

// get first path item, apply new gradient as its fill
var topPath = app.activeDocument.pathItems[0];
topPath.filled = true;
topPath.fillColor = colorOfGradient;
}
```

# GradientColor

A gradient color specification in a `Gradient` object. A script can create a new gradient color using a reference to an existing gradient in the document. If no existing gradient object is referenced, a default gradient is supplied.

## GradientColor properties

Property	Value type	What it is
<code>angle</code>	number (double)	The gradient vector angle in degrees. Default: 0.0
<code>gradient</code>	<a href="#">Gradient</a>	Reference to the object defining the gradient.
<code>hiliteAngle</code>	number (double)	The gradient highlight vector angle in degrees.
<code>hiliteLength</code>	number (double)	The gradient highlight vector length.
<code>length</code>	number (double)	The gradient vector length.
<code>matrix</code>	Matrix	An additional transformation matrix to manipulate the gradient path.
<code>origin</code>	array of 2 numbers	The gradient vector origin, the center point of the gradient in this color.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Changing a gradient stop color

```
// Creates a new RGB document, then changes the color
// of the first gradient stop of an indexed gradient

app.documents.add(DocumentColorSpace.RGB);

// Get a reference to the gradient that you want to change
var gradientRef = app.activeDocument.gradients[1];
// Create the new color
var startColor = new RGBColor();
startColor.red = 255;
startColor.green = 238;
startColor.blue = 98;
// apply new color to the first gradient stop
gradientRef.gradientStops[0].color = startColor;
```

# Gradients

A collection of `Gradient` objects in a document.

## Gradients properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Gradients methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Gradient</a>	Creates a new <code>Gradient</code> object.
<code>getByName</code> (name)	string	<a href="#">Gradient</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">Gradient</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Removing a gradient

```
// Deletes the first gradient from the current document

if ( app.documents.length > 0 ) {
    app.activeDocument.gradients[0].remove();
}
```

# GradientStop

A gradient stop definition that represents a point on a specific gradient defined in the document. Each gradient stop specifies a color change in the containing gradient. See [Changing a gradient stop color](#) for an example.

## GradientStop properties

Property	Value type	What it is
<code>color</code>	<a href="#">Color</a>	The color linked to this gradient stop.
<code>midPoint</code>	number (double)	The midpoint key value, specified as a percentage from 13.0 to 87.0.
<code>opacity</code>	number (double)	The opacity value for the gradient stop. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Gradient</a>	Read-only. The gradient that contains this gradient stop.
<code>rampPoint</code>	number (double)	The location of the color in the blend in a range from 0.0 to 100.0, where 100.0 is 100%.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GradientStop methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Deletes this object.

# GradientStops

A collection of `GradientStop` objects in a specific gradient. The elements are not named; you must access them by index.

## GradientStops properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GradientStops methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">GradientStop</a>	Creates a new object.
<code>getByName</code> (name)	string	<a href="#">GradientStop</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	number	<a href="#">GradientStop</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all objects in this collection.

## Adding a new gradient stop

```
// Adds a new gradient stop to a gradient, color of new stop is 70% gray

if ( app.documents.length > 0 && app.activeDocument.gradients.length > 0 ) {
  // Get a reference to the gradient to change
  var changeGradient = app.activeDocument.gradients[0];
  // Get a reference to the last gradient stop
  var origCount = changeGradient.gradientStops.length;
  var lastStop = changeGradient.gradientStops[origCount-1];
  // add the new gradient stop
  var newStop = changeGradient.gradientStops.add();

  // Set the values of the new gradient stop.
  // Move the original last gradient stop a bit to the left and
  // insert the new gradient stop at the old position
  newStop.rampPoint = lastStop.rampPoint;
  lastStop.rampPoint = lastStop.rampPoint - 10;
  // Create a new color to apply to the newly created gradient stop
  // --a Gray tint value of 70%
  var newStopColor = new GrayColor();
  newStopColor.gray = 70.0;
  newStop.color = newStopColor;
}
```

```
}
```

# GraphicStyle

A graphic style. Each graphic style defines a set of appearance attributes that you can apply non-destructively to page items. Graphic styles are contained in documents. Scripts cannot create new graphic styles.

## GraphicStyle properties

Property	Value type	What it is
<code>name</code>	string	The graphic style name.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this graphic style.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GraphicStyle methods

Method	Parameter type	Returns	What it does
<code>applyTo</code> (artItem)	<a href="#">PageItem</a>	Nothing	Applies this art style to a specified art item.
<code>mergeTo</code> (artItem)	<a href="#">PageItem</a>	Nothing	Merges this art style into the current styles of a specified art item.
<code>remove</code> ( )		Nothing	Deletes this object.

## Applying a graphic style

```
// Duplicates each path item in the selection, places the duplicate into a
// new group, then applies a graphic style to the new groups items

if ( app.documents.length > 0 ) {
    var doc = app.activeDocument;
    var selected = doc.selection;

    var newGroup = doc.groupItems.add();
    newGroup.name = "NewGroup";
    newGroup.move( doc, ElementPlacement.PLACEATEND );

    var endIndex = selected.length;
    for ( i = 0; i < endIndex; i++ ) {
        if ( selected[i].typename == "PathItem" )
            selected[i].duplicate( newGroup, ElementPlacement.PLACEATEND );
    }
    for ( i = 0; i < newGroup.pageItems.length; i++ ) {
        doc.graphicStyles[1].applyTo( newGroup.pageItems[i] );
    }
}
```

# GraphicStyles

A collection of `GraphicStyle` objects in a document.

## GraphicStyles properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of graphic styles in the document.
<code>parent</code>	object	Read-only. The document that contains this graphic styles collection.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GraphicStyles methods

Method	Parameter type:	Returns	What it does
<code>getByName</code> (name)	string	<a href="#">GroupItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">GroupItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Removes all elements in the referenced collection.

## Counting graphics styles

```
//Counts the number of graphic styles in the active document
// and stores result in numberOfStyles

if ( app.documents.length > 0 ) {
    var numberOfStyles = app.activeDocument.graphicStyles.length;
}
```

# GraphItem

Any graph artwork object. See example [Rotating graph items](#) below.

## GraphItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout. You cannot set this value to <code>KnockoutState.Unknown</code>
<code>blendingMode</code>	<a href="#">BlendModes</a>	The mode used when compositing an object.
<code>contentVariable</code>	Variable	The content variable bound to the graph item.  It is not necessary to set the type of the <code>contentVariable</code> before binding. Illustrator automatically set the type to <code>GRAPH</code> .
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this graph item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the graph item.
<code>hidden</code>	boolean	If <code>true</code> , this graph item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this graph item belongs.
<code>left</code>	number	The offset (in points) of the left side of the graph item from the left side of the page.
<code>locked</code>	boolean	If <code>true</code> , this graph item is locked.
<code>name</code>	string	The name of this graph item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object; the value is between 0.0 and 100.0.
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>graphItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this object is selected.
<code>sliced</code>	boolean	If <code>true</code> , the graph item is sliced. Default: <code>false</code>

Property	Value type	What it is
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this graph item.
<code>top</code>	number (double)	The offset (in points) of the top of the graph item from the bottom of the page.
<code>typename</code>	string	Read-only. The type of the graph item.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this graph item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the graph item.  It is not necessary to set the type of the <code>visibilityVariable</code> before binding. Illustrator automatically set the type to <code>VISIBILITY</code> .
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the graph item including stroke width.
<code>width</code>	number (double)	The width of the graph item. Range: 0.0 to 16348.0
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object. (Text frame must be above the object.)
<code>zOrderPosition</code>	number (long)	Read-only. The position of this art item within the stacking order of the group or layer (parent) that contains the art item.

## GraphItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( [relativeObject] [, insertionLocation] )	object <a href="#">ElementPlacement</a>	<a href="#">GraphItem</a>	Creates a duplicate of the selected object.
<code>move</code> (relativeObject, insertionLocation)	object <a href="#">ElementPlacement</a>	<a href="#">GraphItem</a>	Moves the object.
<code>remove</code> ( )		Nothing	Deletes this object.

Method	Parameter type	Returns	What it does
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout])	number (double) number (double) boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

# GraphItems

A collection `GraphItems` objects, which gives you access to all the graph art items in an Illustrator document.

## GraphItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GraphItems methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	string	<a href="#">GraphItems</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">GraphItems</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

## Rotating graph items

```
// Rotates each graph item in the current document 90 degrees.

// Verify a document with a graph item is open
var ok = false;
if (documents.length > 0) {
  var docRef = activeDocument
  var iCount = docRef.graphItems.length
  if( iCount > 0) {
    ok = true;
    for (var i=0; i<iCount; i++) {
      var graphRef = docRef.graphItems[i];
      graphRef.selected = true;
      graphRef.rotate(90); //rotate clockwise 90 degrees
    }
    redraw();
  }
}
```

# GrayColor

A grayscale color specification, used where a `color` object is required.

## GrayColor properties

Property	Value type	What it is
<code>gray</code>	number (double)	The tint of the gray. Range: 0.0 to 100.0, where 0.0 is black and 100.0 is white.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Changing a color to gray

```
// Sets the color of the first word in the active document
// to a shade of gray

if ( app.documents.length > 0
    && app.activeDocument.textFrames.length > 0 ) {
    var text = app.activeDocument.textFrames[0].textRange;
    var firstWord = text.words[0];

    // Create the new color
    var textColor = new GrayColor();
    textColor.gray = 45;
    firstWord.filled = true;
    firstWord.fillColor = textColor;
}
```

# GroupItem

A grouped set of art items. Group items can contain all of the same page items that a layer can contain, including other nested groups.

Paths contained in a group or compound path in a document are returned as individual paths when a script asks for the paths contained in the document. However, paths contained in a group or compound path are not returned when a script asks for the paths in a layer which contains the group or compound path.

## GroupItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>clipped</code>	boolean	If <code>true</code> , the group is clipped to the clipping mask.
<code>compoundPathItems</code>	<a href="#">CompoundPathItems</a>	Read-only. The compound path items contained in this group.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>graphItems</code>	<a href="#">GraphItems</a>	Read-only. The graph items contained in this group.
<code>groupItems</code>	<a href="#">GroupItems</a>	Read-only. The group items contained in this group.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this group item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this group item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>legacyTextItems</code>	<a href="#">LegacyTextItems</a>	Read-only. The legacy text items in the group.
<code>locked</code>	boolean	If <code>true</code> , this group item is locked.
<code>meshItems</code>	<a href="#">MeshItems</a>	Read-only. The mesh items contained in this group.
<code>name</code>	string	The name of this group item.
<code>nonNativeItems</code>	<a href="#">NonNativeItems</a>	Read-only. The non-native art items in this group.

Property	Value type	What it is
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>pageItems</code>	<a href="#">PageItems</a>	Read-only. The page items (all art item classes) contained in this group.
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>pathItems</code>	<a href="#">PathItems</a>	Read-only. The path items contained in this group.
<code>placedItems</code>	<a href="#">PlacedItems</a>	Read-only. The placed items contained in this group.
<code>pluginItems</code>	<a href="#">PluginItems</a>	Read-only. The plug-in items contained in this group.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>groupItem</code> object in the format [x, y]. Does not include stroke weight.
<code>rasterItems</code>	<a href="#">RasterItems</a>	Read-only. The raster items contained in this group.
<code>selected</code>	boolean	If <code>true</code> , this group item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>symbolItems</code>	<a href="#">SymbolItems</a>	Read-only. The symbol item objects in this group.
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this group.
<code>textFrames</code>	<a href="#">TextFrameItems</a>	Read-only. The text art items contained in this group.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this group item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the group item including stroke width.
<code>width</code>	number (double)	The width of the group item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this group object within the stacking order of the group or layer ( <code>parent</code> ) that contains the group object.

## GroupItem methods

Method	Parameter type	Returns	What it does
<b>duplicate</b> ( [relativeObject] [, insertionLocation] )	object <a href="#">ElementPlacement</a>	<a href="#">GroupItem</a>	Creates a duplicate of the selected object.
<b>move</b> (relativeObject, insertionLocation)	object <a href="#">ElementPlacement</a>	<a href="#">GroupItem</a>	Moves the object.
<b>remove</b> ( )		Nothing	Deletes this object.
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout] )	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout] )	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout] )	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ( [deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns] )	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Modifying all objects in a group

It is easy to modify all of the objects contained in a group. This example demonstrates how to simplify your operations on multiple objects by creating a group to contain them.

```
// Creates a new group item, adds a new path item, of triangle shape, to the group, then
// adds a new text item to the group and sets the fill color of the text to red

if ( app.documents.length > 0 ) {
    var triangleGroup = app.activeDocument.groupItems.add();

    // Create a triangle and add text, the new art is created inside the group
    var trianglePath = triangleGroup.pathItems.add();
    trianglePath.setEntirePath( Array( Array(100, 100), Array(300, 100),
        Array(200, Math.tan(1.0471975) * 100 + 100) ) );
    trianglePath.closed = true;
    trianglePath.stroked = true;
    trianglePath.filled = false;
    trianglePath.strokeWidth = 3;

    var captionText = triangleGroup.textFrames.add();
    captionText.position = Array(100, 150);
    captionText.textRange.size = 48;
    captionText.contents = "A triangle";

    var fillColor = new RGBColor;
    fillColor.red = 255;
    fillColor.green = 0;
    fillColor.blue = 0;
    captionText.characters.fillColor = fillColor;
}
```

# GroupItems

The collection of grouped art items in a document.

## GroupItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## GroupItems methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">GroupItem</a>	Creates a new object.
<code>createFromFile</code> (imageFile)	File	<a href="#">GroupItem</a>	Places an external vector art file as a group item in the document.
<code>getByName</code> (name)	string	<a href="#">GroupItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">GroupItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Importing a PDF as a group item

The following script shows how you can import a PDF document using the `createFromFile` function. Before running this script you must create a one page PDF file and put it in the location `/temp/testfile1.pdf`.

```
// Embeds a new group item in to the current
// document from a file specified by dest
// dest should contain the full path and file name

function embedPDF(dest) {
    var embedDoc = new File(dest);
    if ( app.documents.length > 0 && embedDoc.exists ) {
        var doc = app.activeDocument;
        var placed = doc.groupItems.createFromFile( embedDoc );
    }
}
```

# IllustratorSaveOptions

Options for saving a document as an Illustrator file, used with the [saveAs](#) method. All properties are optional.

## IllustratorSaveOptions properties

Property	Value type	What it is
<b>artboardRange</b>	string	If <code>saveMultipleArtboards</code> is <code>true</code> (which is valid only for Illustrator 13 or earlier), the document is considered for multi-asset extraction, which specifies an artboard range. An empty string extracts all artboards. Default: empty string
<b>compatibility</b>	<a href="#">Compatibility</a>	Specifies the version of Illustrator file format to create. Default: <code>Compatibility.ILLUSTRATOR17</code>
<b>compressed</b>	boolean	(Illustrator version 10 or later.) If <code>true</code> , the saved file is compressed. Default: <code>true</code>
<b>embedICCPProfile</b>	boolean	(Illustrator version 9 or later.) If <code>true</code> , the document's ICC profile is embedded in the saved file. Default: <code>false</code>
<b>embedLinkedFiles</b>	boolean	(Illustrator version 7 or later.) If <code>true</code> , the linked image files is embedded in the saved file. Default: <code>false</code>
<b>flattenOutput</b>	<a href="#">OutputFlattening</a>	(Versions before Illustrator 9.) How transparency should be flattened for older file format versions. Default: <code>OutputFlattening.PRESERVEAPPEARANCE</code>
<b>fontSubsetThreshold</b>	number (double)	(Illustrator version 9 or later.) Include a subset of fonts when less than this percentage of characters is used in the document. Range: 0.0 to 100.0. Default: 100.0
<b>pdfCompatible</b>	boolean	(Illustrator version 10 or later.) If <code>true</code> , the file is saved as a PDF compatible file. Default: <code>true</code>
<b>saveMultipleArtboards</b>	boolean	If <code>true</code> , all artboards or range of the artboards are saved. Valid for Illustrator 13 or earlier.
<b>typename</b>	string	Read-only. The class name of the referenced object.

## Saving with options

```
// Saves the current document to dest as an AI file with specified options,  
// dest specifies the full path and file name of the new file  
  
function exportFileToAI (dest) {  
  if ( app.documents.length > 0 ) {  
    var saveOptions = new IllustratorSaveOptions();  
    var ai8Doc = new File(dest);  
    saveOptions.compatibility = Compatibility.ILLUSTRATOR8;  
    saveOptions.flattenOutput = OutputFlattening.PRESERVEAPPEARANCE;  
    app.activeDocument.saveAs( ai8Doc, saveOptions );  
  }  
}
```

# ImageCaptureOptions

Options for image capture, used with the [imageCapture](#) method. All properties are optional.

## ImageCaptureOptions properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the image result is anti-aliased. Default: <code>false</code>
<b>matte</b>	boolean	If <code>true</code> , the artboard is matted with a color. Default: <code>false</code>
<b>matteColor</b>	<a href="#">RGBColor</a>	The color to use for the artboard matte. Default: <code>white</code>
<b>resolution</b>	number (double)	The resolution of the captured image file in points-per-inch (PPI), in the range [72.0 ... 2400.0]. Default: 150
<b>transparency</b>	boolean	If <code>true</code> , the image result is transparent. Default: <code>false</code>
<b>typename</b>	string	Read-only. The class name of the referenced object.

# Ink

Associates a document ink name with ink information.

## Ink properties

Property	Value type	What it is
<code>inkInfo</code>	<a href="#">InkInfo</a>	The ink information
<code>name</code>	string	The ink's name
<code>typename</code>	string	Read-only. The class name of the object

# InkInfo

Ink information for printing a document.

## InkInfo properties

Property	Value type	What it is
<b>angle</b>	number (double)	The ink's screen angle in degrees. Range: -360 to 360
<b>customColor</b>	<a href="#">Color</a>	The color of the custom ink.
<b>density</b>	number (double)	The neutral density. Minimum: 0.0
<b>dotShape</b>	string	The dot shape name.
<b>frequency</b>	number (double)	The ink's frequency. Range: 0.0 to 1000.0
<b>kind</b>	<a href="#">InkType</a>	The ink type.
<b>printingStatus</b>	<a href="#">InkPrintStatus</a>	The ink printing status.
<b>trapping</b>	<a href="#">TrappingType</a>	The trapping type.
<b>trappingOrder</b>	number (long)	The order of trapping for the ink. Range: 1 to 4 for CMYK
<b>typename</b>	string	Read-only. The class name of the object.

## Getting ink information

```
// Displays the current documents inks in a text frame

var docRef = documents.add();
var textRef = docRef.textFrames.add();

// assemble a string of the inks in this document
var sInks = "";
var iLength = activeDocument.inkList.length;

for(var i=0; i<iLength; i++) {
    sInks += docRef.inkList[i].name;
    sInks += "\r\t";
    sInks += "Frequency = " + docRef.inkList[i].inkInfo.frequency;
    sInks += "\r\t";
    sInks += "Density = " + docRef.inkList[i].inkInfo.density;
    sInks += "\r";
}
textRef.contents = sInks;
textRef.top = 600;
textRef.left = 200;
redraw();
```

# InsertionPoint

A location between characters that is used to insert new text objects. An insertion point is contained in an `InsertionPoints` collection.

## InsertionPoint properties

Property	Value type	What it is
<code>characters</code>	<a href="#">Characters</a>	Read-only. All the characters in this text range.
<code>lines</code>	<a href="#">Lines</a>	Read-only. All the lines in this text range.
<code>paragraphs</code>	<a href="#">Paragraphs</a>	Read-only. All the paragraphs in this text range.
<code>parent</code>	<a href="#">TextRange</a>	Read-only. The object's container.
<code>story</code>	<a href="#">Story</a>	Read-only. The story to which the text range belongs.
<code>textRanges</code>	<a href="#">TextRanges</a>	Read-only. All of the text in this text range.
<code>typename</code>	string	Read-only. The class name of the object.
<code>words</code>	<a href="#">Words</a>	Read-only. All the words contained in this text range.

# InsertionPoints

A collection of `InsertionPoint` objects.

## InsertionPoints properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. Number of elements in the collection.
<code>parent</code>	<code>object</code>	Read-only. The object's container.
<code>typename</code>	<code>string</code>	Read-only. The class name of the object.

## InsertionPoints methods

Method	Parameter type	Returns	What it does
<code>index</code> ( <code>itemKey</code> )	<code>string</code> , <code>number</code>	<a href="#">InsertionPoint</a>	Gets an element from the collection.

## Using insertion points to add spaces

```
// Creates a new document, adds text then inserts a
// space between each character using insertion points

var docRef = documents.add();
var textRef = docRef.textFrames.add();
textRef.contents = "Wouldn't you rather be scripting?";
textRef.top = 400;
textRef.left = 100;
textRef.textRange.characterAttributes.size = 20;
redraw();

// Add a space between each character using insertion points.
var ip;
for(var i=0; i<(textRef.insertionPoints.length); i+=2) {
    ip = textRef.insertionPoints[i];
    ip.characters.add(" ");
}
```

# LabColor

A color specification in the CIE Lab color space, used where a `color` object is required.

## LabColor properties

Property	Value type	What it is
<b>a</b>	number (double)	The a (red-green) color value. Range -128.0–128.0. Default: 0.0
<b>b</b>	number (double)	The b (yellow-blue) color value. Range -128.0–128.0. Default: 0.0
<b>l</b>	number (double)	The l (lightness) color value. Range -128.0–128.0. Default: 0.0

# Layer

A layer in an Illustrator document. Layers may contain nested layers, which are called sublayers in the user interface.

The `layer` object contains all of the page items in the specific layer as elements. Your script can access page items as elements of either the `Layer` object or as elements of the `Document` object. When accessing page items as elements of a layer, only objects in that layer can be accessed. To access page items throughout the entire document, be sure to refer to them as contained by the document.

## Layer properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout. You cannot set this value to <code>KnockoutState.Unknown</code> .
<code>blendingMode</code>	<a href="#">BlendModes</a>	The mode used when compositing an object.
<code>color</code>	<a href="#">RGBColor</a>	The layer's selection mark color.
<code>compoundPathItems</code>	<a href="#">CompoundPathItems</a>	Read-only. The compound path items contained in this layer.
<code>dimPlacedImages</code>	boolean	If <code>true</code> , placed images should be rendered as dimmed in this layer.
<code>graphItems</code>	<a href="#">GraphItems</a>	Read-only. The graph items contained in this layer.
<code>groupItems</code>	<a href="#">GroupItems</a>	Read-only. The group items contained in this layer.
<code>hasSelectedArtwork</code>	boolean	If <code>true</code> , an object in this layer has been selected; set to <code>false</code> to deselect all objects in the layer.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layers</code>	<a href="#">Layers</a>	Read-only. The layers contained in this layer.
<code>legacyTextItems</code>	<a href="#">LegacyTextItems</a>	Read-only. The legacy text items in this layer.
<code>locked</code>	boolean	If <code>true</code> , this layer is editable; set to <code>false</code> to lock the layer.
<code>meshItems</code>	<a href="#">MeshItems</a>	Read-only. The mesh items contained in this layer.
<code>name</code>	string	The name of this layer.
<code>nonNativeItems</code>	<a href="#">NonNativeItems</a>	The non-native art items in this layer.
<code>opacity</code>	number (double)	The opacity of the layer. Range: 0.0 to 100.0
<code>pageItems</code>	<a href="#">PageItems</a>	Read-only. The page items (all art item classes) contained in this layer.
<code>parent</code>	<a href="#">Document</a> Or <a href="#">Layer</a>	Read-only. The document or layer that contains this layer.

Property	Value type	What it is
<code>pathItems</code>	<a href="#">PathItems</a>	Read-only. The path items contained in this layer.
<code>placedItems</code>	<a href="#">PlacedItems</a>	Read-only. The placed items contained in this layer.
<code>pluginItems</code>	<a href="#">PluginItems</a>	Read-only. The plug-in items contained in this layer.
<code>preview</code>	boolean	If <code>true</code> , this layer should be displayed using preview mode.
<code>printable</code>	boolean	If <code>true</code> , this layer should be printed when printing the document.
<code>rasterItems</code>	<a href="#">RasterItems</a>	Read-only. The raster items contained in this layer.
<code>sliced</code>	boolean	If <code>true</code> , the layer item is sliced. Default: <code>false</code>
<code>symbolItems</code>	<a href="#">SymbolItems</a>	Read-only. The symbol items contained in the layer.
<code>textFrames</code>	<a href="#">TextFrameItems</a>	Read-only. The text art items contained in this layer.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>visible</code>	boolean	If <code>true</code> , this layer is visible.
<code>zOrderPosition</code>	number (long)	Read-only. The position of this layer within the stacking order of layers in the document.

## Layer methods

Method	Parameter type	Returns	What does it do
<code>move</code> (relativeObject, insertionLocation)	object <a href="#">ElementPlacement</a>	<a href="#">Layer</a>	Moves the object.
<code>remove</code> ( )		Nothing	Deletes this object.
<code>zOrder</code> (ZOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the layer's position in the stacking order of the containing layer or document ( <code>parent</code> ) of this object

## Bringing a layer to the front

```
// Moves the bottom layer to become the topmost layer

if (documents.length > 0) {
  countOfLayers = activeDocument.layers.length;
  if (countOfLayers > 1) {
    bottomLayer = activeDocument.layers[countOfLayers-1];
    bottomLayer.zOrder(ZOrderMethod.BRINGTOFRONT);
  }
  else {
    alert("The active document only has only 1 layer")
  }
}
```

# Layers

The collection of layers in the document.

## Layers properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Layers methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Layer</a>	Creates a new layer in the document.
<code>getByName</code> (name)	string	<a href="#">Layer</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">Layer</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Finding and deleting layers

```
// Deletes all layers whose name begins with "Temp" in all open documents

// loop through all open documents
var layersDeleted = 0;
for ( i = 0; i < app.documents.length; i++ ) {
    var targetDocument = app.documents[i];
    var layerCount = targetDocument.layers.length;
    // Loop through layers from the back, to preserve index
    // of remaining layers when we remove one
    for (var ii = layerCount - 1; ii >= 0; ii-- ) {
        targetLayer = targetDocument.layers[ii];
        var layerName = new String( targetLayer.name );
        if ( layerName.indexOf("Temp") == 0 ) {
            targetDocument.layers[ii].remove();
            layersDeleted++;
        }
    }
}
}
```

# LegacyTextItem

A text object created in Illustrator CS (version 10) or earlier, which is uneditable until converted. To convert legacy text, see [convertToNative](#).

You can view, move, and print legacy text, but you cant edit it. Legacy text has an “x” through its bounding box when selected.

## LegacyTextItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>converted</code>	boolean	Read-only. If <code>true</code> , the legacy text item has been updated to a native text frame item.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> Or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>LegacyTextItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.

Property	Value type	What it is
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## LegacyTextItem methods

Method	Parameter type	Returns	What it does
<code>convertToNative</code> ( )		<a href="#">GroupItem</a>	Converts the legacy text item to a text frame and deletes the original legacy text.
<code>duplicate</code> ([relativeObject] [,insertionLocation])	object <a href="#">ElementPlacement</a>	<a href="#">LegacyTextItem</a>	Creates a duplicate of the selected object.
<code>move</code> (relativeObject, insertionLocation)	object <a href="#">ElementPlacement</a>	<a href="#">LegacyTextItem</a>	Moves the object.
<code>remove</code> ( )		Nothing	Deletes this object.

Method	Parameter type	Returns	What it does
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout])	number (double) number (double) boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

# LegacyTextItems

A collection of `LegacyTextItem` objects.

## LegacyTextItems properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. Number of elements in the collection.
<code>parent</code>	<code>object</code>	Read-only. The object's container.
<code>typename</code>	<code>string</code>	Read-only. The class name of the object.

## LegacyTextItems methods

Method	Parameter type	Returns	What it does
<code>convertToNative</code> ( )		<code>boolean</code>	Creates text frames from all legacy text items; the original legacy text items are deleted. Returns <code>true</code> on success.
<code>getByName</code> (name)	<code>string</code>	<a href="#">LegacyTextItem</a>	Get the first element in the collection with the specified name.
<code>index</code> (itemKey)	<code>string, number</code>	<a href="#">LegacyTextItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Lines

A collection of `TextRange` objects representing lines of text in a text frame. The elements are not named; you must access them by index.

### Lines properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. Number of elements in the collection.
<code>parent</code>	<code>object</code>	Read-only. The object's container.
<code>typename</code>	<code>string</code>	Read-only. The class name of the object.

### Lines methods

Method	Parameter type	Returns	What it does
<code>index</code> <code>(itemKey)</code>	<code>number</code>	<a href="#">TextRange</a>	Gets an element from the collection.
<code>removeAll</code> <code>()</code>		Nothing	Deletes all elements in this collection.

# Matrix

A transformation matrix specification, used to transform the geometry of objects. Use it to specify and retrieve matrix information from an Illustrator document or from page items in a document.

Matrices are used in conjunction with the `transform` method and as a property of a number of objects. A matrix specifies how to transform the geometry of an object. You can generate an original matrix using the `Application` object methods `getTranslationMatrix`, `getScaleMatrix`, or `getRotationMatrix`.

A `Matrix` is a record containing the matrix values, not a reference to a matrix object. The matrix commands operate on the values of a matrix record. If a command modifies a matrix, a modified matrix record is returned as the result of the command. The original matrix record passed to the command is not modified.

## Matrix properties

Property	Value type	What it is
<code>mValueA</code>	number (double)	Matrix property a.
<code>mValueB</code>	number (double)	Matrix property b.
<code>mValueC</code>	number (double)	Matrix property c.
<code>mValueD</code>	number (double)	Matrix property d.
<code>mValueTX</code>	number (double)	Matrix property tx.
<code>mValueTY</code>	number (double)	Matrix property ty.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Combining matrices to apply multiple transformations

To apply multiple transformations to objects, it is more efficient to use the matrix suite than to apply the transformations one at a time. The following script demonstrates how to combine multiple matrices.

```
// Transforms all art in a document using translation and rotation matrices,
// moves art half an inch to the right and 1.5 inches up on the page

if ( app.documents.length > 0 ) {
    var moveMatrix = app.getTranslationMatrix( 0.5, 1.5 );
    // Add a rotation to the translation, 10 degrees counter clockwise
    var totalMatrix = concatenateRotationMatrix( moveMatrix, 10 );
    // apply the transformation to all art in the document
    var doc = app.activeDocument;
    for ( i = 0; i < doc.pageItems.length; i++ ) {
        doc.pageItems[i].transform( totalMatrix );
    }
}
```

# MeshItem

A gradient mesh art item. You cannot create mesh items from a script. However, you can copy an existing mesh item with the `duplicate` method, then use the one of the move methods to place the copy at the proper location.

## MeshItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>meshItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).

Property	Value type	What it is
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## MeshItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>[relativeObject]</code> <code>[,insertionLocation]</code> )	object <a href="#">ElementPlacement</a>	<a href="#">MeshItem</a>	Creates a duplicate of the selected object.
<code>move</code> ( <code>relativeObject</code> , <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">MeshItem</a>	Moves the object.
<code>remove</code> ( <code>)</code>		Nothing	Deletes this object.
<code>resize</code> ( <code>scaleX</code> , <code>scaleY</code> <code>[,changePositions]</code> <code>[,changeFillPatterns]</code> <code>[,changeFillGradients]</code> <code>[,changeStrokePattern]</code> <code>[,changeLineWidths]</code> <code>[,scaleAbout]</code> )	number (double) number (double) boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<code>rotate</code> ( <code>angle</code> <code>[,changePositions]</code> <code>[,changeFillPatterns]</code> <code>[,changeFillGradients]</code> <code>[,changeStrokePattern]</code> <code>[,rotateAbout]</code> )	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.

Method	Parameter type	Returns	What it does
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Finding and locking mesh items

```
// Locks all mesh items in the current document

if ( app.documents.length > 0 ) {
  doc = app.activeDocument;
  for ( i = 0; i < doc.meshItems.length; i++ ) {
    doc.meshItems[i].locked = true;
  }
}
```

# MeshItems

A collection of `MeshItem` objects.

## MeshItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection
<code>parent</code>	object	Read-only. The parent of this object
<code>typename</code>	string	Read-only. The class name of the referenced object.

## MeshItems methods

Method	Parameter type	Returns	What it does
<code>getName</code> (name)	string	<a href="#">MeshItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">MeshItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Copying mesh items to another document

To run this script, have two open documents. One document should contain at least one mesh item, the other document can be empty. Make the empty document the frontmost before running the script.

```
// Copies all mesh items from one document to a new document

if ( app.documents.length > 0 ) {
    var srcDoc = documents[0];
    var locationOffset = 0;
    var targetDoc = documents.add();

    for ( i = 0; i < srcDoc.meshItems.length; i++) {
        srcItem = srcDoc.meshItems[i];
        var dupItem = srcDoc.meshItems[i].duplicate( targetDoc,
            ElementPlacement.PLACEATEND );

        // offset the copied items' position on the y axis
        dupItem.position = Array( 100, 50 + locationOffset );
        locationOffset += 50;
    }
}
```

# NoColor

Represents the “none” color. Assigning a `NoColor` object to the fill or stroke color of an art item is equivalent to setting the `filled` or `stroked` property to `false`.

## NoColor properties

Property	Value type	What it is
<code>typename</code>	string	Read-only. The class name of the object

## Using NoColor to remove a fill color

```
// Creates 2 overlapping objects with different fill colors.
// Assign the top object a fill color of "NoColor"
// allowing the bottom object to become visible.

// create 2 overlapping objects one blue, one red;
var docRef = documents.add();
var itemRef1 = docRef.pathItems.rectangle(500, 200, 200, 100);
var itemRef2 = docRef.pathItems.rectangle(550, 150, 200, 200);
var rgbColor = new RGBColor();
rgbColor.red = 255;
itemRef2.fillColor = rgbColor;
rgbColor.blue = 255;
rgbColor.red = 0;
itemRef1.fillColor = rgbColor;
redraw();

// create a nocolor and assign it to the top object
var noColor = new NoColor();
itemRef2.fillColor = noColor;
redraw();
```

# NonNativeItem

A non-native artwork item.

## NonNativeItem properties

These classes inherit all properties from the `page item` class.

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Document</a> , <a href="#">Layer</a> , or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>NonNativeItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).

Property	Value type	What it is
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the non-native-item object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap non-native-item objects around this object (non-native-item object must be above the object).
<code>zOrderPosition</code>	number	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## NonNativeItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>[relativeObject]</code> <code>[,insertionLocation]</code> )	object <a href="#">ElementPlacement</a>	<a href="#">NonNativeItem</a>	Creates a duplicate of the selected object.
<code>move</code> ( <code>relativeObject</code> , <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">NonNativeItem</a>	Moves the object.
<code>remove</code> ( <code>()</code> )		Nothing	Deletes this object.
<code>removeAll</code> ( <code>()</code> )		Nothing	Deletes all elements in this collection.
<code>resize</code> ( <code>scaleX</code> , <code>scaleY</code> <code>[,changePositions]</code> <code>[,changeFillPatterns]</code> <code>[,changeFillGradients]</code> <code>[,changeStrokePattern]</code> <code>[,changeLineWidths]</code> <code>[,scaleAbout]</code> )	number (double) number (double) boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.

Method	Parameter type	Returns	What it does
<b>rotate</b> (angle [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,rotateAbout])	number (double) boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,changeLineWidths] [,transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [,deltaY] [,transformObjects] [,transformFillPatterns] [,transformFillGradients] [,transformStrokePatterns])	number (double) number (double) boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

# NonNativeItems

A collection of `NonNativeItem` objects.

## NonNativeItems properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. The number of objects in the collection.
<code>parent</code>	<code>object</code>	Read-only. The parent of this object.
<code>typename</code>	<code>string</code>	Read-only. The class name of the referenced object.

## NonNativeItems methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	<code>string</code>	<a href="#">NonNativeItem</a> , <a href="#">SymbolItem</a>	Gets the first element in the collection with the specified name.

# OpenOptions

Options for opening a document, used with the [open](#) method.

## OpenOptions properties

Property	Value type	What it is
<code>convertCropAreaToArboard</code>	boolean	Optional. Convert crop areas to artboards when opening a legacy document in Illustrator CS4 or later. When false, crop areas are discarded. Default: true.
<code>convertTilesToArboard</code>	boolean	Optional. Convert print tiles to artboards when opening a legacy document in Illustrator CS4 or later. Default: false.
<code>createArtboardWithArtworkBoundingBox</code>	boolean	Optional. Create an artboard with the dimensions of the bounding box of the artwork when opening a legacy document in Illustrator CS4 or later. Default: false.
<code>openAs</code>	<a href="#">LibraryType</a>	Optional. Open the file as an Illustrator library of this type. Default: <code>LibraryType.IllustratorArtwork</code> .
<code>preserveLegacyArtboard</code>	boolean	Optional. Preserve legacy artboards when opening a legacy document in Illustrator CS4 or later. Default: true.
<code>updateLegacyGradientMesh</code>	boolean	If true, preserves the spot colors in the gradient mesh objects for legacy documents (pre-Illustrator CS4). Default: true
<code>updateLegacyText</code>	boolean	Optional. If true, update all legacy text items (from previous versions of Illustrator). Default: false

## Automatically updating legacy text on open

```
// Opens a file with legacy text (AI 10 or older), using
// OpenOptions to automatically update the legacy text.

var fileRef = filePath;
if (fileRef != null) {
  var optRef = new OpenOptions();
  optRef.updateLegacyText = true;
  var docRef = open(fileRef, DocumentColorSpace.RGB, optRef);
}
```

# OpenOptionsAutoCAD

Options for opening an AutoCAD drawing, used with the [open](#) method.

## OpenOptionsAutoCAD properties

Property	Value type	What it is
<code>centerArtwork</code>	boolean	If <code>true</code> , the artwork is centered on the artboard. Default: <code>true</code>
<code>globalScaleOption</code>	<a href="#">AutoCADGlobalScaleOption</a>	How to scale the drawing on import. Default: <code>AutoCADGlobalScaleOption.FitArtboard</code>
<code>globalScalePercent</code>	double	The value when <code>globalScaleOption</code> is <code>AutoCADGlobalScaleOption.ScaleByValue</code> , expressed as a percentage. Range: 0.0 to 100.0. Default is 100.0
<code>mergeLayers</code>	boolean	If <code>true</code> , the layers of the artwork are merged. Default: <code>false</code>
<code>parent</code>	object	Read-only. The object's container.
<code>scaleLineweights</code>	boolean	If <code>true</code> , line weights are scaled by the same factor as the rest of the drawing. Default: <code>false</code>
<code>selectedLayoutName</code>	string	The name of the layout in the drawing to import.
<code>typename</code>	string	Read-only. The class name of the object.
<code>unit</code>	<a href="#">AutoCADUnit</a>	The unit to map to. Default: <code>AutoCADUnit.Millimeters</code>
<code>unitScaleRatio</code>	double	The ratio by which to scale while mapping units. Default: 1.0

# OpenOptionsFreeHand

Options for opening a FreeHand file.

## OpenOptionsFreeHand properties

Property	Value type	What it is
<code>convertTextToOutlines</code>	boolean	If <code>true</code> , all text is converted to vector paths; preserves the visual appearance of type. Default: <code>false</code>
<code>importSinglePage</code>	boolean	If <code>true</code> , imports only the page specified in the <code>pageToOpen</code> property. Default: <code>true</code>
<code>pageToOpen</code>	long	The number of the page to import when opening a multipage document. Valid only when <code>importSinglePage</code> is <code>true</code> .
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

# OpenOptionsPhotoshop

Options for opening a Photoshop document, used with the [open](#) method.

## OpenOptionsPhotoshop properties

Property	Value type	What it is
<code>layerComp</code>	string	The name of the layer comp to use when the document is converted.
<code>preserveHiddenLayers</code>	boolean	If <code>true</code> , preserve hidden layers when the document is converted. Default: <code>false</code> .
<code>preserveImageMaps</code>	boolean	If <code>true</code> , preserve image maps when the document is converted. Default: <code>true</code> .
<code>preserveLayers</code>	boolean	If <code>true</code> , preserve layers when the document is converted. Default: <code>true</code> .
<code>preserveSlices</code>	boolean	If <code>true</code> , preserve slices when the document is converted. Default: <code>true</code> .
<code>typename</code>	string	Read-only. The class name of the object.

# PageItem

Any art item. Every art item and group in a document is a page item. You may refer to a page item as an element of a document, layer, or group item.

The `PageItem` class gives you complete access to every art item contained in an Illustrator document. The `PageItem` class is the superclass of all artwork objects in a document. The `CompoundPathItem`, `GroupItem`, `MeshItem`, `PathItem`, `PlacedItem`, `PluginItem`, `RasterItem`, and `TextFrame` classes each inherit a set of properties from the `PageItem` class.

You cannot create a `PageItem` directly, you must create one of the specific `PageItem` subclasses, such as `PathItem`.

## PageItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The mode to use when compositing this object. An object is considered composited when its opacity is set to less than 100.0 (100%).
<code>controlBounds</code>	<code>rect</code>	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	<code>boolean</code>	Read-only. If <code>true</code> , this page item is editable.
<code>geometricBounds</code>	<code>rect</code>	Read-only. The object's bounds excluding the stroke width.
<code>height</code>	<code>real</code>	The height of the page item, calculated from the geometric bounds. Range: 0.0 to 16348.0
<code>hidden</code>	<code>boolean</code>	If <code>true</code> , this page item is hidden.
<code>isIsolated</code>	<code>boolean</code>	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this page item belongs.
<code>left</code>	<code>number (double)</code>	The left position of the art item.
<code>locked</code>	<code>boolean</code>	If <code>true</code> , this page item is locked.
<code>name</code>	<code>string</code>	The name of this page item.
<code>note</code>	<code>string</code>	The note assigned to this item.
<code>opacity</code>	<code>real</code>	The opacity of this object, where 100.0 is completely opaque and 0.0 is completely transparent.
<code>parent</code>	<code>object</code>	Read-only. The parent of this object.
<code>pixelAligned</code>	<code>boolean</code>	True if this item is aligned to the pixel grid.
<code>position</code>	<code>point</code>	The position (in points) of the top left corner of the item in the format <code>{x, y}</code> . Does not include stroke weight.

Property	Value type	What it is
<code>selected</code>	boolean	If <code>true</code> , this object is selected.
<code>sliced</code>	boolean	If <code>true</code> , preserve slices.
<code>tags</code>	<a href="#">Tags</a>	The collection of tags associated with this page item.
<code>top</code>	number (double)	The top position of the art item.
<code>typename</code>	string	Read-only. The class name of the object.
<code>URL</code>	string	The value of the Adobe URL tag assigned to this page item.
<code>visibilityVariable</code>	anything	The visibility variable to which this page item path is bound.
<code>visibleBounds</code>	rect	Read-only. The object's visible bounds, including stroke width of any objects in the illustration.
<code>width</code>	real	The width of the page item, calculated from the geometric bounds. Range: 0.0 to 16348.0
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The drawing order of the art within its group or layer.

## PageItem methods

Method	Parameter type	Returns	What it does
<code>bringInPerspective</code> ( <code>posX</code> , <code>posY</code> , <code>perspectiveGridPlane</code> )	number number <a href="#">PerspectiveGridPlaneType</a>	Nothing	Places art object(s) in a perspective grid at a specified position and grid plane.
<code>resize</code> ( <code>scaleX</code> , <code>scaleY</code> [, <code>changePositions</code> ] [, <code>changeFillPatterns</code> ] [, <code>changeFillGradients</code> ] [, <code>changeStrokePattern</code> ] [, <code>changeLineWidths</code> ] [, <code>scaleAbout</code> ])	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales art object(s).

Method	Parameter type	Returns	What it does
<b>rotate</b> (angle [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,rotateAbout])	number (double) boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates art object(s).
<b>transform</b> (transformationMatrix [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,changeLineWidth] [,transformAbout])	matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms art object(s) using a transformation matrix.
<b>translate</b> ([deltaX] [,deltaY] [,transformObjects] [,transformFillPatterns] [,transformFillGradients] [,transformStrokePattern])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions art object(s).
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art relative to other art in the group or layer.

## PageItems

A collection of page item objects. Provides complete access to all the art items in an Illustrator document in the following classes:

[CompoundPathItem](#)  
[GraphItem](#)  
[GroupItem](#)  
[LegacyTextItem](#)  
[MeshItem](#)  
[NonNativeItem](#)  
[PathItem](#)  
[PlacedItem](#)  
[PluginItem](#)  
[RasterItem](#)  
[SymbolItem](#)  
[TextFrameItem](#)

You can reference page items through the `PageItems` property in a `Document`, `Layer`, or `Group`. When you access an individual item in one of these collections, the reference is a page item of one of a particular type. For example, if you use `PageItems` to reference a graph item, the `typename` value of that object is `GraphItem`.

### PageItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

### PageItems methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	string	<a href="#">PageItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">PageItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Getting references to external files in page items

Before running this script, open a document that contains one or more linked images.

```
// Gets all file-references in the current document using the pageItems object,
// then displays them in a new document

if ( app.documents.length > 0 ) {
    var fileReferences = new Array();

    var sourceDoc = app.activeDocument;
    var sourceName =sourceDoc.name;
    for ( i = 0; i < sourceDoc.pageItems.length; i++ ) {
        artItem = sourceDoc.pageItems[i];
        switch ( artItem.typename ) {
            case "PlacedItem":
                fileReferences.push( artItem.file.fsName );
                break;
            case "RasterItem":
                if ( ! artItem.embedded ) {
                    fileReferences.push( artItem.file.fsName );
                }
                break;
        }
    }
}
// Write the file references to a new document
var reportDoc = documents.add();
var areaTextPath = reportDoc.pathItems.rectangle( reportDoc.height,0,
    reportDoc.width, reportDoc.height );
var fileNameText = reportDoc.textFrames.areaText( areaTextPath );
fileNameText.textRange.size = 24;
var paragraphCount = 3;
var text = "File references in \" + sourceName + "\":\r\r";
for ( i = 0; i < fileReferences.length; i++ ) {
    text += ( fileReferences[i] + "\r" );
    paragraphCount++;
}
fileNameText.contents = text;
}
```

# Paper

Associates paper information with a paper name. `Paper` objects are used by `Printer` objects.

## Paper properties

Property	Value type	What it is
<code>name</code>	string	The paper name.
<code>paperInfo</code>	<a href="#">PaperInfo</a>	The paper information.
<code>typename</code>	string	Read-only. The class name of the object.

# PaperInfo

Paper information for use in printing documents.

## PaperInfo properties

Property	Value type	What it is
<code>customPaper</code>	boolean	If <code>true</code> , it is a custom paper.
<code>height</code>	number (double)	The paper's height in points.
<code>imageableArea</code>	array of 4 numbers	The imageable area.
<code>typename</code>	string	Read-only. The class name of the object.
<code>width</code>	number (double)	The paper's width in points.

## Finding paper information

```
// Displays the papers and paper sizes available for the 2nd printer in a text frame

var docRef = documents.add();
var itemRef = docRef.pathItems.rectangle(600, 300, 200, 100);
var textRef = docRef.textFrames.add();
textRef.top = 600;
textRef.left = 50;
// get paper objects for 2nd printer
var printerRef = printerList[1];
textRef.contents = printerRef.name;
textRef.contents += " paper list:\r";
var paragraphCount = 2;
// get details of each paper
var iCount = printerRef.printerInfo.paperSizes.length;
for( var i=0; i<iCount; i++ ) {
    var paperRef = printerRef.printerInfo.paperSizes[i];
    var paperInfoRef = paperRef.paperInfo;
    textRef.contents += paperRef.name;
    textRef.contents += "\t";
    textRef.contents += paperInfoRef.height;
    textRef.contents += " x ";
    textRef.contents += paperInfoRef.width;
    textRef.contents += "\r";
    paragraphCount++;
}
redraw();
```

## ParagraphAttributes

Specifies the properties and attributes of a paragraph contained in a text frame.

Note: Paragraph attributes do not have default values, and are undefined until explicitly set.

### ParagraphAttributes properties

Property	Value type	What it is
<code>autoLeadingAmount</code>	number (double)	Auto leading amount expressed as a percentage.
<code>bunriKinshi</code>	boolean	If <code>true</code> , BunriKinshi is enabled.
<code>burasagariType</code>	<a href="#">BurasagariTypeEnum</a>	The Burasagari type.
<code>desiredGlyphScaling</code>	number (double)	Desired glyph scaling, expressed as a percentage of the default character width. Range: 50.0 to 200.0. At 100.0, the width of characters is not changed.
<code>desiredLetterSpacing</code>	number (double)	Desired letter, spacing expressed as a percentage of the default kerning or tracking Range: -100.0 to 500.0. At 0, no space is added between letters. At 100.0, an entire space width is added between letters.
<code>desiredWordSpacing</code>	number (double)	Desired word spacing, expressed as a percentage of the default space for the font. Range: 0.0 to 1000.0; at 100.00. No space is added between words.
<code>everyLineComposer</code>	boolean	If <code>true</code> , the Every-line Composer is enabled. If <code>false</code> , the Single-line Composer is enabled.
<code>firstLineIndent</code>	number (double)	First line left indent in points.
<code>hyphenateCapitalizedWords</code>	boolean	If <code>true</code> , hyphenation is enabled for capitalized words.
<code>hyphenation</code>	boolean	If <code>true</code> , hyphenation is enabled for the paragraph.
<code>hyphenationPreference</code>	number (double)	Hyphenation preference scale for better spacing (0) or fewer hyphens (1). Range: 0.0 to 1.0

Property	Value type	What it is
<code>hyphenationZone</code>	number (double)	The distance (in points) from the right edge of the paragraph that marks the part of the line where hyphenation is not allowed.  <b>NOTE:</b> 0 allows all hyphenation. Valid only when <a href="#">everyLineComposer</a> is <code>false</code> .
<code>justification</code>	<a href="#">Justification</a>	Paragraph justification.
<code>kinsoku</code>	string	The Kinsoku Shori name.
<code>kinsokuOrder</code>	<a href="#">KinsokuOrderEnum</a>	The preferred Kinsoku order.
<code>kurikaeshiMojishori</code>	boolean	If <code>true</code> , <code>KurikaeshiMojishori</code> is enabled.
<code>leadingType</code>	<a href="#">AutoLeadingType</a>	Auto leading type.
<code>leftIndent</code>	number (double)	The left indent of margin in points.
<code>maximumConsecutiveHyphens</code>	number (long)	Maximum number of consecutive hyphenated lines.
<code>maximumGlyphScaling</code>	number (double)	Maximum glyph scaling, expressed as a percentage of the default character width. Range: 50.0 to 200.0; at 100.0. The width of characters is not changed.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>maximumLetterSpacing</code>	number (double)	Maximum letter spacing, expressed as a percentage of the default kerning or tracking. Range: -100.0 to 500.0; at 0. No space is added between letters. At 100.0, an entire space width is added between letters.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>maximumWordSpacing</code>	number (double)	Maximum word spacing, expressed as a percentage of the default space for the font. Range: 0.0 to 1000.0; at 100.00. No space is added between words.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>minimumAfterHyphen</code>	number (long)	Minimum number of characters after a hyphen.
<code>minimumBeforeHyphen</code>	number (long)	Minimum number of characters before a hyphen.

Property	Value type	What it is
<code>minimumGlyphScaling</code>	number (double)	Minimum glyph scaling, expressed as a percentage of the default character width. Range: 50.0 to 200.0. At 100.0, the width of characters is not changed.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>minimumHyphenatedWordSize</code>	number (long)	Minimum number of characters for a word to be hyphenated.
<code>minimumLetterSpacing</code>	number (double)	Minimum letter spacing, expressed as a percentage of the default kerning or tracking Range: -100.0 to 500.0; at 0. No space is added between letters. At 100.0, an entire space width is added between letters.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>minimumWordSpacing</code>	number (double)	Minimum word spacing, expressed as a percentage of the default space for the font. Range: 0.0 to 1000.0; at 100.00. No space is added between words.  <b>NOTE:</b> Valid only for justified paragraphs.
<code>mojikumi</code>	string	The Mojikumi name.
<code>parent</code>	object	Read-only. The object's container.
<code>rightIndent</code>	number (double)	Right indent of margin in points.
<code>romanHanging</code>	boolean	If <code>true</code> , Roman hanging punctuation is enabled.
<code>singleWordJustification</code>	<a href="#">Justification</a>	Single word justification.
<code>spaceAfter</code>	number (double)	Spacing after paragraph in points.
<code>spaceBefore</code>	number (double)	Spacing before paragraph in points.
<code>tabStops</code>	<a href="#">TabStopInfo</a>	Tab stop settings.
<code>typename</code>	string	Read-only. The class name of the object.

## Changing justification in paragraphs

```
// Creates a new document with 1 text frame and 3 paragraphs
// then gives each paragraph a different justification

var docRef = documents.add();
var pathRef = docRef.pathItems.rectangle(600, 200, 200, 400);
var textRef = docRef.textFrames.areaText(pathRef);
textRef.paragraphs.add("Left justified paragraph.");
textRef.paragraphs.add("Center justified paragraph.");
textRef.paragraphs.add("Right justified paragraph.");
textRef.textRange.characterAttributes.size = 28;

// change the justification of each paragraph
// using the paragraph attributes object
var paraAttr_0 = textRef.paragraphs[0].paragraphAttributes;
paraAttr_0.justification = Justification.RIGHT;
var paraAttr_1 = textRef.paragraphs[1].paragraphAttributes;
paraAttr_1.justification = Justification.CENTER;
var paraAttr_2 = textRef.paragraphs[2].paragraphAttributes;
paraAttr_2.justification = Justification.LEFT;
```

## Paragraphs

A collection of `TextRange` objects, with each `TextRange` representing a paragraph. The elements are not named; you must access them by index.

### Paragraphs properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

### Paragraphs methods

Method	Parameter type	Returns	What it does
<code>add</code> (contents [,relativeObject] [,insertionLocation])	string <a href="#">TextFrameItem</a> <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Adds a new paragraph with specified text contents at the specified location in the current document. If location is not specified, adds the new paragraph to the containing text frame after the current text selection or insertion point.
<code>addBefore</code> (contents)	string	<a href="#">TextRange</a>	Adds a new paragraph with specified text contents before the current text selection or insertion point.
<code>index</code> (itemKey)	number	<a href="#">TextRange</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

### Counting paragraphs

```
// Counts all paragraphs in current doc and stores result in paragraphCount
if ( app.documents.length > 0 ) {
  doc = app.activeDocument;
  paragraphCount = 0;
  for ( i = 0; i < doc.textFrames.length; i++ ) {
    paragraphCount += doc.textFrames[i].paragraphs.length;
  }
}
```

## ParagraphStyle

Associates character and paragraph attributes with a style name. The style object can be used to apply those attributes to the text in a `TextFrame` object. See [Creating and applying a paragraph style](#) below.

### ParagraphStyle properties

Property	Value type	What it is
<code>characterAttributes</code>	<a href="#">CharacterAttributes</a>	Read-only. The character properties for the text range.
<code>name</code>	string	The paragraph style's name.
<code>paragraphAttributes</code>	<a href="#">ParagraphAttributes</a>	Read-only. The paragraph properties for the text range.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

### ParagraphStyle methods

Method	Parameter type	Returns	What it does
<code>applyTo</code> (textItem [, clearingOverrides])	object boolean	Nothing	Applies this paragraph style to the specified text item.
<code>remove</code> ( )		Nothing	Deletes the object.

# ParagraphStyles

A collection of `ParagraphStyle` objects.

## ParagraphStyles properties

Property	Value type	What it is
<code>length</code>	number	Read-only. Number of elements in the collection.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

## ParagraphStyles methods

Method	Parameter type	Returns	What it does
<code>add</code> (name)	string	<a href="#">ParagraphStyle</a>	Creates a named paragraph style.
<code>getByName</code> (name)	string	<a href="#">ParagraphStyle</a>	Get the first element in the collection with the provided name.
<code>index</code> (itemKey)	string, number	<a href="#">ParagraphStyle</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

## Creating and applying a paragraph style

```
// Creates a new document with 1 text frame and 3 paragraphs
// gives each paragraph a different justification, then creates
// a paragraph style and applies it to all paragraphs

var docRef = documents.add();
var pathRef = docRef.pathItems.rectangle(600, 200, 200, 400);
var textRef = docRef.textFrames.areaText(pathRef);
textRef.paragraphs.add("Left justified paragraph.");
textRef.paragraphs.add("Center justified paragraph.");
textRef.paragraphs.add("Right justified paragraph.");
textRef.textRange.characterAttributes.size = 28;

// change the justification of each paragraph
// using the paragraph attributes object
var paraAttr_0 = textRef.paragraphs[0].paragraphAttributes;
paraAttr_0.justification = Justification.RIGHT;
var paraAttr_1 = textRef.paragraphs[1].paragraphAttributes;
paraAttr_1.justification = Justification.CENTER;
var paraAttr_2 = textRef.paragraphs[2].paragraphAttributes;
paraAttr_2.justification = Justification.LEFT;

// create a new paragraph style
var paraStyle = docRef.paragraphStyles.add("LeftIndent");

// add some paragraph attributes
var paraAttr = paraStyle.paragraphAttributes;
paraAttr.justification = Justification.LEFT;
paraAttr.firstLineIndent = 10;

// apply the style to each item in the document
var iCount = textRef.paragraphs.length;
for(var i=0; i<iCount; i++) {
    paraStyle.applyTo(textRef.paragraphs[i], true);
}
redraw();
```

# PathItem

Specifies a path item, which contains `PathPoint` objects that define its geometry. The `PathItem` class gives you complete access to paths in Illustrator. The `setEntirePath` method provides an extremely efficient way to create paths comprised of straight lines.

## PathItem properties

Property	Value type	What it is
<code>area</code>	number (double)	Read-only. The area of this path in square points. If the area is negative, the path is wound counterclockwise. Self-intersecting paths can contain sub-areas that cancel each other out, which makes this value zero even though the path has apparent area.
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>clipping</code>	boolean	If <code>true</code> , this path should be used as a clipping path.
<code>closed</code>	boolean	If <code>true</code> , this path is closed.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>evenodd</code>	boolean	If <code>true</code> , the even-odd rule should be used to determine “insideness.”
<code>fillColor</code>	<a href="#">Color</a>	The fill color of the path.
<code>filled</code>	boolean	If <code>true</code> , the path be filled.
<code>fillOverprint</code>	boolean	If <code>true</code> , the art beneath a filled object should be overprinted.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>guides</code>	boolean	If <code>true</code> , this path is a guide object.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).

Property	Value type	What it is
<code>length</code>	number (double)	The length of this path in points.
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note text assigned to the path.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> Or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>pathPoints</code>	<a href="#">PathPoints</a>	Read-only. The path points contained in this path item.
<code>pixelAligned</code>	boolean	True if this item is aligned to the pixel grid.
<code>polarity</code>	<a href="#">PolarityValues</a>	The polarity of the path.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>pathItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>resolution</code>	number (double)	The resolution of the path in dots per inch (dpi).
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>selectedPathPoints</code>	<a href="#">PathPoints</a>	Read-only. All of the selected path points in the path.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>strokeCap</code>	<a href="#">StrokeCap</a>	The type of line capping.
<code>strokeColor</code>	<a href="#">Color</a>	The stroke color for the path.
<code>stroked</code>	boolean	If <code>true</code> , the path should be stroked.
<code>strokeDashes</code>	object	Dash lengths. Set to an empty object, <code>{}</code> , for a solid line.
<code>strokeDashOffset</code>	number (double)	The default distance into the dash pattern at which the pattern should be started.
<code>strokeJoin</code>	<a href="#">StrokeJoin</a>	Type of joints for the path.
<code>strokeMiterLimit</code>	number (double)	When a default stroke join is set to <code>mitered</code> , this property specifies when the join will be converted to beveled (squared-off) by default. The default miter limit of 4 means that when the length of the point reaches four times the stroke weight, the join switches from a miter join to a bevel join. A value of 1 specifies a bevel join. Range: 1 to 500. Default: 4
<code>strokeOverprint</code>	boolean	If <code>true</code> , the art beneath a stroked object should be overprinted.
<code>strokeWidth</code>	number (double)	The width of the stroke (in points).

Property	Value type	What it is
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## PathItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>[relativeObject]</code> <code>[,insertionLocation]</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PathItem</a>	Creates a duplicate of the selected object.
<code>move</code> ( <code>relativeObject</code> , <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PathItem</a>	Moves the object.
<code>remove</code> ( <code>()</code> )		Nothing	Deletes this object.
<code>resize</code> ( <code>scaleX</code> , <code>scaleY</code> <code>[,changePositions]</code> <code>[,changeFillPatterns]</code> <code>[,changeFillGradients]</code> <code>[,changeStrokePattern]</code> <code>[,changeLineWidths]</code> <code>[,scaleAbout]</code> )	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.

Method	Parameter type	Returns	What it does
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the angle value is positive, clockwise if the value is negative.
<b>setEntirePath</b> (pathPoints)	array of [x, y] coordinate pairs	Nothing	Sets the path using an array of points specified as [x, y] coordinate pairs.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Setting colors in a path

```
// Sets the stroke and fill of a path item to colors of a randomly selected swatch

if ( app.documents.length > 0 && app.activeDocument.pathItems.length > 0 ) {
  doc = app.activeDocument;
  for (var i = 0; i < doc.pathItems.length; i++ ) {
    pathRef = doc.pathItems[i];
    pathRef.filled = true;
    pathRef.stroked = true;
    swatchIndex = Math.round( Math.random() * ( doc.swatches.length - 1 ) );
    pathRef.fillColor = doc.swatches[ swatchIndex ].color;
    pathRef.strokeColor = doc.swatches[ swatchIndex ].color;
  }
}
```

## Creating a path from straight lines

This script illustrates the use of the `setEntirePath` method.

```
// Creates a new open path consisting of 10 straight lines

if ( app.documents.length > 0 ) {
  var lineList = new Array(10);
  for ( i = 0; i < lineList.length; i++ ) {
    lineList[i] = new Array( i * 10 + 50, ((i - 5) ^ 2) * 5 +50);
  }
  app.defaultStroked = true;
  newPath = app.activeDocument.pathItems.add();
  newPath.setEntirePath(lineList);
}
```

# PathItems

A collection of `PathItem` objects. The methods `ellipse`, `polygon`, `rectangle`, `roundedRectangle`, and `star` allow you to create complex path items using straightforward parameters. If you do not provide any parameters when calling these methods, default values are used.

## PathItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## PathItems methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">PathItem</a>	Creates a new object.
<code>ellipse</code> ( [top] [, left] [, width] [, height] [, reversed] [, inscribed] )	number (double) number (double) number (double) number (double) boolean boolean	<a href="#">PathItem</a>	Creates a new pathItem in the shape of an ellipse using the supplied parameters. Defaults: top: 100 pt.; left: 100 pt.; width: 50 pt.; height: 100 pt.; reversed: false
<code>getByName</code> (name)	string	<a href="#">PathItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">PathItem</a>	Gets an element from the collection.
<code>polygon</code> ( [centerX] [, centerY] [, radius] [, sides] [, reversed] )	number (double) number (double) number (double) number (long) boolean	<a href="#">PathItem</a>	Creates a new pathItem in the shape of a polygon using the supplied parameters. Defaults: centerX: 200 pt.; centerY: 300 pt.; radius: 50 pt.; sides: 8; reversed: false
<code>rectangle</code> (top, left, width, height [, reversed] )	number (double) number (double) number (double) number (double) boolean	<a href="#">PathItem</a>	Creates a new pathItem in the shape of a polygon using the supplied parameters.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

Method	Parameter type	Returns	What it does
<b>roundedRectangle</b> (top, left, width, height [,horizontalRadius] [,verticalRadius] [,reversed])	number (double) number (double) number (double) number (double) number (double) number (double) boolean	<a href="#">PathItem</a>	Creates a new pathItem in the shape of a rectangle with rounded corners using the supplied parameters. Defaults: horizontalRadius: 15 pt; verticalRadius: 20 pt; reversed: false
<b>star</b> ([centerX] [,centerY] [,radius] [,innerRadius] [,points] [,reversed])	number (double) number (double) number (double) number (double) number (long) boolean	<a href="#">PathItem</a>	Creates a new path item in the shape of a star using the supplied parameters. Defaults: centerX: 200 pt; centerY: 300 pt.; radius: 50 pt.; innerRadius: 20 pt.; points: 5; reversed: false

## Creating shapes

```
// Creates 5 shapes in layer 1 of document 1
// and applies a random graphic style to each

var doc = app.documents.add();
var artLayer = doc.layers[0];
app.defaultStroked = true;
app.defaultFilled = true;

var rect = artLayer.pathItems.rectangle( 762.5, 87.5, 425.0, 75.0 );
var rndRect = artLayer.pathItems.roundedRectangle(
    637.5, 87.5, 425.0, 75.0, 20.0, 10.0 );
// Create ellipse, 'reversed' is false, 'inscribed' is true
var ellipse = artLayer.pathItems.ellipse(
    512.5, 87.5, 425.0, 75.0, false, true );
// Create octagon, and 8-sided polygon
var octagon = artLayer.pathItems.polygon( 300.0, 325.0, 75.0, 8 );
// Create a 4 pointed star
var star = artLayer.pathItems.star( 300.0, 125.0, 100.0, 20.0, 4 );

for ( i = 0; i < artLayer.pathItems.length; i++ ) {
    styleIndex = Math.round(
        Math.random() * ( doc.graphicStyles.length - 1 ) );
    doc.graphicStyles[styleIndex].applyTo( artLayer.pathItems[i] );
}
```

# PathPoint

A point on a specific path. Each path point is made up of an anchor point (`anchor`) and a pair of handles (`leftDirection` and `rightDirection`).

## PathPoint properties

Property	Value type	What it is
<code>anchor</code>	array of 2 numbers	The position of this point's anchor point.
<code>leftDirection</code>	array of 2 numbers	The position of this path point's in control point.
<code>parent</code>	<a href="#">PathItem</a>	Read-only. The path item that contains this path point.
<code>pointType</code>	<a href="#">PointType</a>	The type of path point, either a curve or a corner. Any point can be considered a corner point. Setting the type to a corner forces the left and right direction points to be on a straight line when the user attempts to modify them in the user interface.
<code>rightDirection</code>	array of 2 numbers	The position of this path point's out control point.
<code>selected</code>	<a href="#">PathPointSelection</a>	Are points of this path point selected, and if so, which ones.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## PathPoint methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Removes the referenced point from the path.

# PathPoints

A collection of `PathPoint` objects in a specific path. The elements are not named; you must access them by index.

## PathPoints properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## PathPoints methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">PathPoint</a>	Creates a new <code>PathPoint</code> object.
<code>index</code> (itemKey)	number	<a href="#">PathPoint</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Adding a path point to a path

```
// Appends a new PathPoint to an existing path
// and initializes its anchor and handle points.

if ( app.documents.length > 0 ) {
    var doc = app.activeDocument;
    var line = doc.pathItems.add();
    line.stroked = true;
    line.setEntirePath( Array( Array(220, 475), Array(375, 300) ) );

    // Append another point to the line
    var newPoint = doc.pathItems[0].pathPoints.add();

    newPoint.anchor = Array(220, 300);
    newPoint.leftDirection = newPoint.anchor;
    newPoint.rightDirection = newPoint.anchor;
    newPoint.pointType = PointType.CORNER;
}
```

# Pattern

An Illustrator pattern definition contained in a document. Patterns are shown in the Swatches palette. Each pattern is referenced by a [PatternColor](#) object, which defines the pattern's appearance.

## Pattern properties

Property	Value type	What it is
<code>name</code>	string	The pattern name.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this pattern.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Pattern methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Removes the referenced pattern from the document.
<code>toString</code> <code>()</code>		string	Returns the object type of a referenced object. If the object has a name, also returns the name.

# PatternColor

A pattern color specification. You can create a new pattern color by modifying an existing pattern in the document. Any modification you make to a pattern affects that pattern in the Palette.

`PatternColor` objects can be used in any property that takes a color object, such as `fillColor` or `strokeColor`.

## PatternColor properties

Property	Value type	What it is
<code>matrix</code>	<code>Matrix</code>	Additional transformation arising from manipulating the path.
<code>pattern</code>	<a href="#">Pattern</a>	A reference to the pattern object that defines the pattern to use in this color definition.
<code>reflect</code>	<code>boolean</code>	If <code>true</code> , the prototype should be reflected before filling. Default: <code>false</code>
<code>reflectAngle</code>	<code>number (double)</code>	The axis around which to reflect, in points. Default: 0.0
<code>rotation</code>	<code>number (double)</code>	The angle in radians to rotate the prototype pattern before filling. Default: 0.0
<code>scaleFactor</code>	array of 2 numbers	The fraction to which to scale the prototype pattern before filling, represented as a point containing horizontal and vertical scaling percentages.
<code>shearAngle</code>	<code>number (double)</code>	The angle in radians by which to slant the shear. Default: 0.0
<code>shearAxis</code>	<code>number (double)</code>	The axis to shear with respect to, in points. Default: 0.0
<code>shiftAngle</code>	<code>number (double)</code>	The angle in radians to which to translate the unscaled prototype pattern before filling. Default: 0.0
<code>shiftDistance</code>	<code>number (double)</code>	The distance in points to which to translate the unscaled prototype pattern before filling. Default: 0.0
<code>typename</code>	<code>string</code>	Read-only. The class name of the referenced object.

## Modifying and applying pattern colors

```
// Rotates the color of each pattern in the current document,  
// then applies the last pattern to the first path item  
  
if ( app.documents.length > 0 && app.activeDocument.pathItems.length > 0 ) {  
    doc = app.activeDocument;  
    swatchIndex = 0;  
    for ( i = 0; i < doc.swatches.length; i++ ) {  
        // Get the generic color object of the swatch  
        currentSwatch = doc.swatches[i];  
        swatchColor = currentSwatch.color;  
        // Only operate on patterns  
        if ( currentSwatch.color.typename == "PatternColor" ) {  
            // Change a pattern property  
            currentSwatch.color.rotation = 10;  
            swatchIndex = i;  
        }  
    }  
    // Apply the last pattern color swatch to the frontmost path  
    firstPath = app.activeDocument.pathItems[0];  
    firstPath.filled = true;  
    firstPath.fillColor = doc.swatches[swatchIndex].color;  
}
```

# Patterns

A collection of `Pattern` objects in a document.

## Patterns properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Patterns methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Pattern</a>	Creates a new object.
<code>getByName</code> (name)	string	<a href="#">Pattern</a>	Gets the first element in the collection with the provided name.
<code>index</code> (itemKey)	string, number	<a href="#">Pattern</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Removing a pattern

```
// Deletes the last pattern from the current document.

if ( app.documents.length > 0 ) {
    var lastIndex = app.activeDocument.patterns.length - 1;
    var patternToRemove = app.activeDocument.patterns[lastIndex];
    var patternName = patternToRemove.name;
    patternToRemove.remove();
    // Note after removing Illustrator objects, set the variable that
    // referenced the removed object to null, since it is now invalid.
    patternToRemove = null;
}
```

# PDFFileOptions

Options for opening a PDF file, used with the [open](#) method. All properties are optional.

## PDFFileOptions properties

Property	Value type	What it is
<code>pageToOpen</code>	number (long)	What page should be used when opening a multipage document. Default: 1
<code>parent</code>	object	Read-only. The object's container.
<code>pdfCropToBox</code>	<a href="#">PDFBoxType</a>	Which box should be used when placing a multipage document. Default: <code>PDFBoxType.PDFMediaBox</code>
<code>typename</code>	string	Read-only. The class name of the object.

## Opening a PDF with options

```
// Opens a PDF file with specified options

var pdfOptions = app.preferences.PDFFileOptions;
pdfOptions.pdfCropToBox = PDFBoxType.PDFBOUNDINGBOX;
pdfOptions.pageToOpen = 2;

// Open a file using these preferences
var fileRef = filePath;
if (fileRef != null) {
    var docRef = open(fileRef, DocumentColorSpace.RGB);
}
```

# PDFSaveOptions

Options for saving a document as an Adobe PDF file, used with the [saveAs](#) method. All properties are optional.

## PDFSaveOptions properties

Property	Value type	What it is
<code>acrobatLayers</code>	boolean	Optional. Create Acrobat® layers from top-level layers. Acrobat 6 only. Default: <code>false</code>
<code>artboardRange</code>	string	Optional. This is considered for multi-asset extraction, which specifies the artboard range. An empty string extracts all the artboards. Default: empty string
<code>bleedLink</code>	boolean	Optional. Link 4 bleed values. Default: <code>true</code>
<code>bleedOffsetRect</code>	array of 4 numbers	The bleed offset rectangle.
<code>colorBars</code>	boolean	Optional. Draw color bars. Default: <code>false</code>
<code>colorCompression</code>	<a href="#">CompressionQuality</a>	Optional. The type of color bitmap compression used. Default: <code>CompressionQuality.None</code>
<code>colorConversionID</code>	<a href="#">ColorConversion</a>	Optional. The PDF color conversion policy. Default: <code>ColorConversion.None</code>
<code>colorDestinationID</code>	<a href="#">ColorDestination</a>	Optional. The conversion target for color conversion. Default: <code>ColorDestination.None</code>
<code>colorDownsampling</code>	number (double)	Optional. The color downsampling resolution in dots per inch (dpi). If 0, no downsampling is performed. Default: 150.0
<code>colorDownsamplingImageThreshold</code>	number (double)	Optional. Downsample if the image's resolution is above this value. Default: 225.0

Property	Value type	What it is
<code>colorDownsamplingMethod</code>	<a href="#">DownsampleMethod</a>	Optional. How color bitmap images should be resampled. Default: <code>DownsampleMethod.NODOWNSAMPLE</code>
<code>colorProfileID</code>	<a href="#">ColorProfile</a>	Optional. The color profile to include. Default: <code>ColorProfile.None</code>
<code>colorTileSize</code>	number (long)	Optional. Tile size when compressing with JPEG2000. Default: 256
<code>compatibility</code>	<a href="#">PDFCompatibility</a>	Optional. The version of the Acrobat file format to create. Default: <code>PDFCompatibility.Acrobat5</code>
<code>compressArt</code>	boolean	Optional. If <code>true</code> , the line art and text should be compressed. Default: <code>true</code>
<code>documentPassword</code>	string	Optional. A password string to open the document. Default: no string
<code>enableAccess</code>	boolean	Optional. If <code>true</code> , enable accessing 128-bit. Default: <code>true</code>
<code>enableCopy</code>	boolean	Optional. If <code>true</code> , enable copying of text 128-bit. Default: <code>true</code>
<code>enableCopyAccess</code>	boolean	Optional. If <code>true</code> , enable copying and accessing 40-bit. Default: <code>true</code>
<code>enablePlainText</code>	boolean	Optional. If <code>true</code> , enable plaintext metadata 128-bit. Available only for Acrobat 6. Default: <code>false</code>
<code>flattenerOptions</code>	<a href="#">PrintFlattenerOptions</a>	Optional. The printing flattener options.
<code>flattenerPreset</code>	stringOptional.	Optional. The transparency flattener preset name.

Property	Value type	What it is
<code>fontSubsetThreshold</code>	number (double)	Optional. Include a subset of fonts when less than this percentage of characters is used in the document. Valid for Illustrator 9 file format. Range: 0.0 to 100.0. Default: 100.0
<code>generateThumbnails</code>	boolean	Optional. If <code>true</code> , thumbnail images are generated with the saved file. Default: <code>true</code>
<code>grayscaleCompression</code>	<a href="#">CompressionQuality</a>	Optional. Quality of grayscale bitmap compression. Default: <code>None</code>
<code>grayscaleDownsampling</code>	number (double)	Optional. Downsampling resolution in dots per inch (dpi). If 0, no downsampling is performed. Default: 150.0
<code>grayscaleDownsamplingImageThreshold</code>	number (double)	Optional. Downsample if the image's resolution is above this value. Default: 225.0
<code>grayscaleDownsamplingMethod</code>	<a href="#">DownsampleMethod</a>	Optional. How grayscale bitmap images should be resampled. Default: <code>DownSampleMethod</code> . <code>NODOWNSAMPLE</code>
<code>grayscaleTileSize</code>	number (long)	Optional. Tile size when compressing with JPEG2000. Default: 256
<code>monochromeCompression</code>	<a href="#">MonochromeCompression</a>	Optional. Type of monochrome bitmap compression used. Default: <code>MonochromeCompression</code> . <code>None</code>
<code>monochromeDownsampling</code>	number (double)	Optional. Downsampling resolution in dots per inch (dpi). If 0, no downsampling is performed. Default: 300
<code>monochromeDownsamplingImageThreshold</code>	number (double)	Optional. Downsample if the image's resolution is above this value. Default: 450.0

Property	Value type	What it is
<code>monochromeDownsamplingMethod</code>	<a href="#">DownsampleMethod</a>	Optional. How monochrome bitmap images should be resampled. Default: <code>DownSampleMethod.NODOWNSAMPLE</code>
<code>offset</code>	number (double)	Optional. Custom offset in points for using the custom paper. Default: 0.0
<code>optimization</code>	boolean	Optional. If <code>true</code> , the PDF document should be optimized for fast web viewing. Default: <code>false</code>
<code>outputCondition</code>	string	Optional. An optional comment to add to the PDF file, describing the intended printing condition. Default: not included
<code>outputConditionID</code>	string	Optional. The name of a registered printing condition. Default: not included
<code>pageInformation</code>	boolean	Optional. If <code>true</code> , raw page information. Default: <code>false</code>
<code>pageMarksType</code>	<a href="#">PageMarksTypes</a>	Optional. The page marks style. Default: <code>PageMarksType.Roman</code>
<code>pdfAllowPrinting</code>	<a href="#">PDFPrintAllowedEnum</a>	Optional. PDF security printing permission. Default: <code>PDFPrintAllowedEnum.PRINT128HIGHRESOLUTION</code>
<code>pdfChangesAllowed</code>	<a href="#">PDFChangesAllowedEnum</a>	Optional. Security changes allowed. Default: <code>PDFChangeAllowedEnum.CHANGE128ANYCHANGES</code>
<code>pdfPreset</code>	string	Optional. Name of PDF preset to use.
<code>pdfXStandard</code>	<a href="#">PDFXStandard</a>	Optional. The PDF standard with which this document complies. Default: <code>PDFXStandard.PDFXNONE</code>
<code>pdfXStandardDescription</code>	string	Optional. A description of the PDF standard from the selected preset.

Property	Value type	What it is
<code>permissionPassword</code>	string	Optional. A password string to restrict editing security settings. Default: no string
<code>preserveEditability</code>	boolean	Optional. If <code>true</code> , Illustrator editing capabilities should be preserved when saving the document. Default: <code>true</code>
<code>printerResolution</code>	number (double)	Optional. Flattening printer resolution. Default: 800.0
<code>registrationMarks</code>	boolean	Optional. If <code>true</code> , draw registration marks. Default: <code>false</code>
<code>requireDocumentPassword</code>	boolean	Optional. Require a password to open the document. Default: <code>false</code>
<code>requirePermissionPassword</code>	boolean	Optional. Use a password to restrict editing security settings. Default: <code>false</code>
<code>trapped</code>	boolean	Optional. If <code>true</code> , manual trapping has been prepared for the document. Default: <code>false</code>
<code>trimMarks</code>	boolean	Optional. Draw trim marks. Default: <code>false</code>
<code>trimMarkWeight</code>	<a href="#">PDFTrimMarkWeight</a>	Optional. The trim mark weight. Default: <code>PDFTrimMarkWeight.TRIMMARKWEIGHT0125</code>
<code>typename</code>	string	Optional. Read-only. The class name of the referenced object.
<code>viewAfterSaving</code>	boolean	Optional. View PDF after saving. Default: <code>false</code>

## Saving to PDF format

```
// Saves the current document as PDF to dest with specified options
// dest contains the full path and file name to save to

function saveFileToPDF (dest) {
  var doc = app.activeDocument;
  if ( app.documents.length > 0 ) {
    var saveName = new File ( dest );
    saveOpts = new PDFSaveOptions();
    saveOpts.compatibility = PDFCompatibility.ACROBAT5;
    saveOpts.generateThumbnails = true;
    saveOpts.preserveEditability = true;
    doc.saveAs( saveName, saveOpts );
  }
}
```

# PhotoshopFileOptions

Options for opening a Photoshop file, used with the [open](#) method. All properties are optional.

## PhotoshopFileOptions properties

Property	Value type	What it is
<code>parent</code>	object	Read-only. The parent of this object.
<code>pixelAspectRatioCorrection</code>	boolean	If <code>true</code> , imported images that have a non-square pixel aspect ratio should be adjusted.
<code>preserveImageMaps</code>	boolean	If <code>true</code> , image maps should be preserved when document is converted. Default: <code>true</code>
<code>preserveLayers</code>	boolean	If <code>true</code> , layers should be preserved when document is converted. Default: <code>true</code>
<code>preserveSlices</code>	boolean	If <code>true</code> , slices should be preserved when document is converted. Default: <code>true</code>
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Opening a Photoshop file

```
// Opens a Photoshop file containing layers with
// preferences set to preserve layers

var psdOptions = preferences.photoshopFileOptions;
psdOptions.preserveLayers = true;
psdOptions.pixelAspectRatioCorrection = false;
// open a file using these prefs
var fileRef = File( psdFilePath);
if (fileRef != null) {
    var docRef = open(fileRef, DocumentColorSpace.RGB);
}
```

# PlacedItem

An artwork item placed in a document as a linked file. For example, an artwork object created using the File > Place command in Illustrator or using the `add()` method of the `placedItems` collection object is a placed item. For information, see [“PlacedItems” on page 155](#).

## PlacedItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>boundingBox</code>	array of 4 numbers	Read-only. The dimensions of the placed art item regardless of transformations.
<code>contentVariable</code>	Variable	The content variable bound to the item.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>file</code>	File	The file containing the artwork.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>matrix</code>	Matrix	The transformation matrix of the placed artwork.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>placedItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.

Property	Value type	What it is
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number (long)	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## PlacedItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>[relativeObject]</code> <code>[,insertionLocation]</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PlacedItem</a>	Creates a duplicate of the selected object.
<code>embed</code> ( <code>()</code> )		Nothing	Embeds this art in the document. Converts the art to art item objects as needed and deletes this object.
<code>move</code> ( <code>relativeObject,</code> <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PlacedItem</a>	Moves the object.
<code>relink</code> ( <code>linkFile</code> )	File object	Nothing	Relinks the art object with the file that defines its content.
<code>remove</code> ( <code>()</code> )		Nothing	Deletes this object.

Method	Parameter type	Returns	What it does
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout])	number (double) number (double) boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>trace</b> ()		<a href="#">PluginItem</a>	Converts the raster art for this object to vector art, using default options. Reorders the placed art into the source art of a plug-in group, and converts it into a group of filled and/or stroked paths that resemble the original image.  Creates and returns a <code>pluginItem</code> object that references a <code>tracingObject</code> object.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Changing the selection state of placed items

```
// Toggles the selection state of all placed items.  
  
if ( app.documents.length > 0 ) {  
    for ( i = 0; i < app.activeDocument.placedItems.length; i++ ) {  
        placedArt = app.activeDocument.placedItems[i];  
        placedArt.selected = !(placedArt.selected);  
    }  
}
```

# PlacedItems

A collection of `PlacedItem` objects in the document.

## PlacedItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## PlacedItems methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )	none	<a href="#">PlacedItem</a>	Creates a new object. Use to place new art in a document. Use the <code>file</code> property of the resulting <code>placedItem</code> object to link the file containing the artwork. See <a href="#">“PlacedItem” on page 151</a> .
<code>getByName</code> (name)	string	<a href="#">PlacedItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">PlacedItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )	none	Nothing	Deletes all elements in this collection.

# PluginItem

An art item created by an Illustrator plug-in. Scripts can create a plug-in item using `PlacedItem.trace` or `RasterItem.trace`, and can copy existing plug-in items using the `duplicate` method, but cannot create `PluginItem` objects directly.

## PluginItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>isTracing</code>	boolean	If <code>true</code> , this plug-in group represents a vector art item created by tracing a raster art item. The <code>tracing</code> property contains the tracing object associated with the options used to create it.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>pluginItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>

Property	Value type	What it is
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>tracing</code>	<a href="#">TracingObject</a>	When this plug-in group was created by tracing ( <code>isTracing</code> is <code>true</code> ), the tracing object associated with the options used to create it.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## PluginItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>[relativeObject]</code> <code>[,insertionLocation]</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PluginItem</a>	Creates a duplicate of the selected object.
<code>move</code> ( <code>relativeObject</code> , <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">PluginItem</a>	Moves the object.
<code>remove</code> ( <code>()</code> )		Nothing	Deletes this object.

Method	Parameter type	Returns	What it does
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout])	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the angle value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Copying a plug-in item

```
// Creates new plug-in art by copying an existing plug-in art item

if ( app.documents.length > 0 && app.activeDocument.pluginItems.length > 0 ) {
  doc = app.activeDocument;
  pluginArt = doc.pluginItems[0];
  pluginArt.duplicate( pluginArt.parent,
    ElementPlacement.PLACEATBEGINNING );
}
```

# PluginItems

A collection of `PluginItem` objects in a document. See [Copying a plug-in item](#).

## PluginItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## PluginItems methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	string	<a href="#">PluginItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">PluginItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all objects in this collection.

# PPDFile

Associates file information with a PostScript Printer Description (PPD) file.

## PPDFile properties

Property	Value type	What it is
<code>name</code>	string	The PPD model name.
<code>PPDInfo</code>	<a href="#">PPDFileInfo</a>	The PPD file information.
<code>typename</code>	string	Read-only. The class name of the object.

# PPDFileInfo

Information about a PostScript Printer Description (PPD) file.

## PPDFileInfo properties

Property	Value type	What it is
<code>languageLevel</code>	string	The PostScript language level.
<code>PPDFilePath</code>	File	Path specification for the PPD file.
<code>screenList</code>	array of <a href="#">Screen</a>	List of color separation screens.
<code>screenSpotFunctionList</code>	array of <a href="#">ScreenSpotFunction</a>	List of color separation screen spot functions.

## Displaying PPD file properties

```
// Displays postscript level and path for each PPD file found in a new text frame

var sPPD = "";
var docRef = documents.add();
var x = 30;
var y = (docRef.height - 30);

var iLength = PPDFileList.length;
if (iLength > 20)
    iLength = 20;

for(var i=0; i<iLength; i++) {
    var ppdRef = PPDFileList[i];
    sPPD = ppdRef.name;
    sPPD += "\r\tPS Level ";
    var ppdInfoRef = ppdRef.PPDInfo;
    sPPD += ppdInfoRef.languageLevel;
    sPPD += "\r\tPath: ";
    sPPD += ppdInfoRef.PPDFilePath;

    var textRef = docRef.textFrames.add();
    textRef.textRange.characterAttributes.size = 8;
    textRef.contents = sPPD;
    textRef.top = (y);
    textRef.left = x;
    redraw();

    if ( (y=(textRef.height)) <= 30 ) {
        y = (docRef.height - 30);
        x += 150;
    }
}
```

## PPDFileInfo and related screen information

```
// Displays in a new text frame, the postscript level, file paths, screens, and
// screen spot information for first 10 PPD files found

var sPPD = "";
var docRef = documents.add();
var x = 30;
var y = (docRef.height - 30);

var iLength = PPDFileInfo.length;
if (iLength > 10)
    iLength = 10;
for(var i=0; i<iLength; i++) {
    var ppdRef = PPDFileInfo[i];
    sPPD = ppdRef.name;
    sPPD += "\r\tPS Level ";
    var ppdInfoRef = ppdRef.PPDInfo;
    sPPD += ppdInfoRef.languageLevel;
    sPPD += "\r\tPath: ";
    sPPD += ppdInfoRef.PPDFilePath;

    sPPD += "\r\tScreens:\r";
    var iScreens = ppdInfoRef.screenList.length;
    for(var c=0; c<iScreens; c++) {
        var screenRef = ppdInfoRef.screenList[c];
        sPPD += "\t\t";
        sPPD += screenRef.name;
        var screenInfoRef = screenRef.screenInfo;
        sPPD += ", Angle = ";
        sPPD += screenInfoRef.angle;
        sPPD += ", Frequency = ";
        sPPD += screenInfoRef.frequency;
        sPPD += "\r";
    }

    sPPD += "\r\tScreenSpots:\r";
    var iScreenSpots = ppdInfoRef.screenSpotFunctionList.length;
    for(var n=0; n<iScreenSpots; n++) {
        var screenSpotRef = ppdInfoRef.screenSpotFunctionList[n];
        sPPD += "\t\t";
        sPPD += screenSpotRef.name;
        sPPD += ", spotFunction: ";
        sPPD += screenSpotRef.spotFunction;
        sPPD += "\r";
    }

    var textRef = docRef.textFrames.add();
    textRef.textRange.characterAttributes.size = 8;
    textRef.contents = sPPD;
    textRef.top = (y);
    textRef.left = x;
    redraw();

    y--(textRef.height);
}
}
```

# Preferences

Specifies the preferred options for AutoCAD, FreeHand, PDF, and Photoshop files.

## Preferences properties

Property	Value type	What it is
<code>AutoCADFileOptions</code>	<a href="#">OpenOptionsAutoCAD</a>	Read-only. Options to use when opening or placing an AutoCAD file.
<code>FreeHandFileOptions</code>	<a href="#">OpenOptionsFreeHand</a>	Read-only. Options to use when opening or placing a FreeHand file.
<code>parent</code>	object	Read-only. The parent of this object.
<code>PDFFileOptions</code>	<a href="#">PDFFileOptions</a>	Read-only. Options to use when opening or placing a PDF file.
<code>PhotoshopFileOptions</code>	<a href="#">PhotoshopFileOptions</a>	Read-only. Options to use when opening or placing a Photoshop file.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Preferences methods

Method	Parameter type	Returns	What it does
<code>getBooleanPreference</code> (key)	string	boolean	Gets the boolean value of a given application preference.
<code>getIntegerPreference</code> (key)	string	integer	Gets the integer value of a given application preference.
<code>getRealPreference</code> (key)	string	double	Gets the real-number value of a given application preference.
<code>getStringPreference</code> (key)	string	string	Gets the string value of a given application preference.
<code>removePreference</code> (key)	string	Nothing	Deletes a given application preference.
<code>setBooleanPreference</code> (key, value)	string boolean	Nothing	Sets the boolean value of a given application preference.
<code>setIntegerPreference</code> (key, value)	string integer	Nothing	Sets the integer value of a given application preference.

Method	Parameter type	Returns	What it does
<b>setRealPreference</b> (key, value)	string double	Nothing	Sets the real-number value of a given application preference.
<b>setStringPreference</b> (key, value)	string string	Nothing	Sets the string value of a given application preference.

# PrintColorManagementOptions

Information used for color management of the document.

## PrintColorManagementOptions properties

Property	Value type	What it is
<code>colorProfileMode</code>	<a href="#">PrintColorProfile</a>	The color management profile mode. Default: <code>PrintColorProfile.SOURCEPROFILE</code>
<code>intent</code>	<a href="#">PrintColorIntent</a>	The color management intent type. Default: <code>PrintColorIntent.RELATIVECOLORIMETRIC</code>
<code>name</code>	string	The color management profile name.
<code>typename</code>	string	Read-only. The class name of the object.

## Managing colors for printing

```
// Creates a new document, adds symbols, then creates a
// PrintColorManagementOptions object and assigns it
// to a PrintOptions object, then prints with each color intent

// Add some symbol items to a new document
var docRef = documents.add();
var y = docRef.height - 30;
for(var i=0; i<(docRef.symbols.length); i++) {

    symbolRef = docRef.symbols[i];
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);
    symbolItemRef1.top = y;
    symbolItemRef1.left = 100;
    y -= (symbolItemRef1.height + 10);
}
redraw();

var colorOptions = new PrintColorManagementOptions();
var options = new PrintOptions();
options.colorManagementOptions = colorOptions;
colorOptions.name = "ColorMatch RGB";

// Print the current document once for each color intent.
colorOptions.intent = PrintColorIntent.ABSOLUTECOLORIMETRIC;
docRef.print(options);

colorOptions.intent = PrintColorIntent.PERCEPTUALINTENT;
docRef.print(options);

colorOptions.intent = PrintColorIntent.RELATIVECOLORIMETRIC;
docRef.print(options);

colorOptions.intent = PrintColorIntent.SATURATIONINTENT;
docRef.print(options);
```

# PrintColorSeparationOptions

Information about the color separations to be used in printing the document.

## PrintColorSeparationOptions properties

Property	Value type	What it is
<code>colorSeparationMode</code>	<a href="#">PrintColorSeparationMode</a>	The color separation type. Default: <code>PrintColorSeparationMode.COMPOSITE</code>
<code>convertSpotColors</code>	boolean	If <code>true</code> , all spot colors should be converted to process colors. Default: <code>false</code>
<code>inkList</code>	array of <a href="#">Ink</a>	The list of inks for color separation.
<code>overPrintBlack</code>	boolean	If <code>true</code> , overprint in black. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the object.

## Managing color separations for printing

```
// Creates a new document with symbol items
// and prints document with each separation option

// Add some symbol items to a new document
var docRef = documents.add();
var y = docRef.height - 30;
for(var i=0; i<(docRef.symbols.length); i++) {
    symbolRef = docRef.symbols[i];
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);
    symbolItemRef1.top = y;
    symbolItemRef1.left = 100;
    y -= (symbolItemRef1.height + 10);
}
// Print with various separation options
var sepOptions = new PrintColorSeparationOptions();
var options = new PrintOptions();
options.colorSeparationOptions = sepOptions;

sepOptions.convertSpotColors = true;
sepOptions.overPrintBlack = true;
sepOptions.colorSeparationMode = PrintColorSeparationMode.COMPOSITE;
docRef.print(options);

sepOptions.colorSeparationMode = PrintColorSeparationMode.INRIPSEPARATION;
docRef.print(options);

sepOptions.convertSpotColors = false;
sepOptions.overPrintBlack = false;
sepOptions.colorSeparationMode = PrintColorSeparationMode.HOSTBASEDSEPARATION;
docRef.print(options);
```

# PrintCoordinateOptions

Information about the media and associated printing parameters.

## PrintCoordinateOptions properties

Property	Value type	What it is
<code>emulsion</code>	boolean	If <code>true</code> , flip artwork horizontally. Default: <code>false</code>
<code>fitToPage</code>	boolean	If <code>true</code> , proportionally scale the artwork to fit on media. Default: <code>false</code>
<code>horizontalScale</code>	number (double)	The horizontal scaling factor expressed as a percentage (100 = 100%). Range: 1.0 to 10000.0. Default: 100.0
<code>orientation</code>	<a href="#">PrintOrientation</a>	The artwork orientation. Default: <code>PrintOrientation.PORTRAIT</code>
<code>position</code>	<a href="#">PrintPosition</a>	The artwork position on media. Default: <code>PrintPosition.TRANSLATECENTER</code>
<code>tiling</code>	<a href="#">PrintTiling</a>	The page tiling mode. Default: <code>PrintTiling.TILESINGLEFULLPAGE</code>
<code>typename</code>	string	Read-only. The class name of the object.
<code>verticalScale</code>	number (double)	The vertical scaling factor expressed as a percentage (100 = 100%) Range: 1.0 to 10000.0. Default: 100.0

## Managing print coordinates

```

???// Creates a new document with symbol items that extend
// off the page then print with each print orientation

var docRef = documents.add();
var y = 500;
var x = -70
if (docRef.symbols.length > 0) {
  for (var i=0; i<5; i++) {
    symbolRef = docRef.symbols[0];
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);
    symbolItemRef1.top = y;
    symbolItemRef1.left = x;
    x += 30;
  }
  redraw();
  // Print it with various Coordinate Options
  var coordinateOptions = new PrintCoordinateOptions();
  var options = new PrintOptions();
  options.coordinateOptions = coordinateOptions;

  coordinateOptions.emulsion = true; // reverse from right to left
  coordinateOptions.fitToPage = true; // fit artwork to page size
  coordinateOptions.orientation = PrintOrientation.LANDSCAPE;

```

```
docRef.print(options);
coordinateOptions.emulsion = false;
coordinateOptions.fitToPage = false;
coordinateOptions.orientation = PrintOrientation.PORTRAIT;
coordinateOptions.horizontalScale = 50;
coordinateOptions.verticalScale = 50;
docRef.print(options);
}
```

## Printer

Associates an available printer with printer information. To request a list of printers, you must first have a document open or an error is returned.

### Printer properties

Property	Value type	What it is
<code>name</code>	string	The printer name.
<code>printerInfo</code>	<a href="#">PrinterInfo</a>	The printer information.
<code>typename</code>	string	Read-only. The class name of the object.

# PrinterInfo

Configuration information about a printer.

## PrinterInfo properties

Property	Value type	What it is
<code>binaryPrintingSupport</code>	boolean	If <code>true</code> , the printer supports binary printing.
<code>colorSupport</code>	<a href="#">PrinterColorMode</a>	The printer color capability.
<code>customPaperSupport</code>	boolean	If <code>true</code> , the printer supports custom paper size.
<code>customPaperTransverseSupport</code>	boolean	If <code>true</code> , the printer supports custom paper transverse.
<code>deviceResolution</code>	number (double)	The printer default resolution.
<code>inRIPSeparationSupport</code>	boolean	If <code>true</code> , the printer supports InRIP color separation.
<code>maxDeviceResolution</code>	number (double)	The printer maximum device resolution.
<code>maxPaperHeight</code>	number (double)	Custom paper's maximum height.
<code>maxPaperHeightOffset</code>	number (double)	Custom paper's maximum height offset.
<code>maxPaperWidth</code>	number (double)	Custom paper's maximum width.
<code>maxPaperWidthOffset</code>	number (double)	Custom paper's maximum width offset.
<code>minPaperHeight</code>	number (double)	Custom paper's minimum height.
<code>minPaperHeightOffset</code>	number (double)	Custom paper's minimum height offset.
<code>minPaperWidth</code>	number (double)	Custom paper's minimum width.
<code>minPaperWidthOffset</code>	number (double)	Custom paper's minimum width offset.
<code>paperSizes</code>	array of <a href="#">Paper</a>	The list of supported paper sizes.
<code>postScriptLevel</code>	<a href="#">PrinterPostScriptLevelEnum</a>	The PostScript Language level.

Property	Value type	What it is
<code>printerType</code>	<a href="#">PrinterTypeEnum</a>	The printer type.
<code>typename</code>	string	Read-only. The class name of the object.

## Finding available printers

```
// Displays a list of available printers in a new text frame

var docRef = documents.add();
var textRef = docRef.textFrames.add();

var iCount = printerList.length;
textRef.contents += "Printers...\r";
for( var i=0; i<iCount; i++ ) {
    textRef.contents += printerList[i].name;
    textRef.contents += "\r\t";
}
textRef.top = 600;
textRef.left = 200;
redraw();
```

## PrintFlattenerOptions

Contains flattening options for use when Illustrator outputs artwork that contains transparency into a non-native format.

### PrintFlattenerOptions properties

Property	Value type	What it is
<code>clipComplexRegions</code>	boolean	If <code>true</code> , complex regions should be clipped. Default: <code>false</code>
<code>convertStrokesToOutlines</code>	boolean	If <code>true</code> , convert all strokes to outlines. Default: <code>false</code>
<code>convertTextToOutlines</code>	boolean	If <code>true</code> , all text is converted to vector paths; preserves the visual appearance of type. Default: <code>false</code>
<code>flatteningBalance</code>	number (long)	The flattening balance. Range: 0.0 to 100.0. Default: 100.0
<code>gradientResolution</code>	number (double)	The gradient resolution in dots per inch (dpi). Range: 1.0 to 9600.0. Default: 300.0
<code>overprint</code>	<a href="#">PDFOverprint</a>	Whether to preserve, discard, or simulate overprinting. Default: <code>PDFOverprint.PRESERVEPDFOVERPRINT</code>
<code>rasterizationResolution</code>	number (double)	The rasterization resolution in dots per inch (dpi). Range: 1.0 to 9600.0. Default: 300.0
<code>typename</code>	string	Read-only. The class name of the object.

## Setting print flattening

```
// Creates a new document, adds symbols to the document
// then prints with a range of flattener balance settings

var docRef = documents.add();
var y = docRef.height - 30;
for(var i=0; i<(docRef.symbols.length); i++) {

    symbolRef = docRef.symbols[i];
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);
    symbolItemRef1.top = y;
    symbolItemRef1.left = 100;
    y -= (symbolItemRef1.height + 10);
}
redraw();
// Create PrintFlattenerOptions object and assign to a PrintOptions object
var flatOpts = new PrintFlattenerOptions();
var printOpts = new PrintOptions();
printOpts.flattenerOptions = flatOpts;
// Set other print options
printOpts.ClipComplexRegions = true;
printOpts.GradientResoultion = 360;
printOpts.RasterizattonResotion = 360;

// Print the current document with flattening balance increments of 20
var i;
for(i=0; i<=100; i+=20) {
    flatOpts.flatteningBalance = i;
    activeDocument.print(printOpts);
}
```

# PrintFontOptions

Contains information about font downloading and substitution for the fonts used for printing the document.

## PrintFontOptions properties

Property	Value type	What it is
<code>downloadFonts</code>	<a href="#">PrintFontDownloadMode</a>	The font download mode. Default: <code>PrintFontDownloadMode.DOWNLOADSUBSET</code>
<code>fontSubstitution</code>	<a href="#">FontSubstitutionPolicy</a>	The font substitution policy. Default: <code>FontSubstitutionPolicy.SUBSTITUTEOBLIQUE</code>
<code>typename</code>	string	Read-only. The class name of the object.

## Printing with font options

```
// Creates a new document, adds text then prints with specified font options.

var docRef = documents.add();
var pathRef = docRef.pathItems.rectangle(500,300,400,400);
var textRef = docRef.textFrames.areaText(pathRef);
textRef.contents = "Text example";
//Create PrintFontOptions object and assign to a PrintOptions object
var fontOpts = new PrintFontOptions();
var printOpts = new PrintOptions();
printOpts.fontOptions = fontOpts;
//Set some font options
fontOpts.downloadFonts = PrintFontDownloadMode.DOWNLOADNONE;
fontOpts.fontSubstitution = FontSubstitutionPolicy.SUBSTITUTEDEVICE;

// print it
activeDocument.print(printOpts);
```

# PrintJobOptions

Contains information about how the job is to be printed.

## PrintJobOptions properties

Property	Value type	What it is
<code>artboardRange</code>	string	The artboard range to be printed if <code>printAllArtboards</code> is false. Default: 1-
<code>bitmapResolution</code>	number (double)	The bitmap resolution. Minimum: 0.0. Default: 0.0
<code>collate</code>	boolean	If <code>true</code> , collate print pages. Default: <code>false</code>
<code>copies</code>	number (long)	The number of copies to print. Minimum: 1. Default: 1
<code>designation</code>	<a href="#">PrintArtworkDesignation</a>	The layers/objects to be printed. Default: <code>PrintArtworkDesignation.VISIBLEPRINTABLELAYERS</code>
<code>file</code>	File	The file to which to print.
<code>name</code>	string	The print job name.
<code>printAllArtboards</code>	boolean	Indicates whether to print all artboards. Default: <code>true</code>
<code>printArea</code>	<a href="#">PrintingBounds</a>	The printing bounds. Default: <code>PrintingBounds.ARTBOARDBOUNDS</code>
<code>printAsBitmap</code>	boolean	If <code>true</code> , print as bitmap. Default: <code>false</code>
<code>reversePages</code>	boolean	If <code>true</code> , print pages in reverse order. Default: <code>false</code>
<code>typename</code>	string	Read-only. The class name of the object.

## Printing with job options

```
// Creates a new document with layers containing visible, printable,  
// non visible and non printable items then prints with each designation  
// to view effects of using different job options  
  
var docRef = documents.add();  
var textRef_0 = docRef.layers[0].textFrames.add();  
textRef_0.contents = "Visible and Printable";  
textRef_0.top = 600;  
textRef_0.left = 200;  
  
var layerRef_1 = docRef.layers.add();  
var textRef_1 = layerRef_1.textFrames.add();  
textRef_1.contents = "Visible and Non-Printable";  
textRef_1.top = 500;  
textRef_1.left = 250;  
layerRef_1.printable = false;  
  
var layerRef_2 = docRef.layers.add();  
var textRef_2 = layerRef_2.textFrames.add();  
textRef_2.contents = "Non-Visible";  
textRef_2.top = 400;  
textRef_2.left = 300;  
layerRef_2.visible = false;  
redraw();  
  
// Print with various job options  
var printJobOptions= new PrintJobOptions();  
var options = new PrintOptions();  
options.jobOptions = printJobOptions;  
  
printJobOptions.designation = PrintArtworkDesignation.ALLLAYERS;  
printJobOptions.reverse = true;  
docRef.print(options);  
  
printJobOptions.collate = false;  
printJobOptions.designation = PrintArtworkDesignation.VISIBLELAYERS;  
printJobOptions.reverse = false;  
docRef.print(options);  
  
printJobOptions.designation = PrintArtworkDesignation.VISIBLEPRINTABLELAYERS;  
var docPath = new File("~/printJobTest1.ps");  
printJobOptions.file = docPath;  
docRef.print(options);
```

# PrintOptions

Contains information about all printing options including flattening, color management, coordinates, fonts, and paper.

## PrintOptions properties

Property	Value type	What it is
<code>colorManagementOptions</code>	<a href="#">PrintColorManagementOptions</a>	The printing color management options.
<code>colorSeparationOptions</code>	<a href="#">PrintColorSeparationOptions</a>	The printing color separation options.
<code>coordinateOptions</code>	<a href="#">PrintCoordinateOptions</a>	The printing coordinate options.
<code>flattenerOptions</code>	<a href="#">PrintFlattenerOptions</a>	The printing flattener options.
<code>flattenerPreset</code>	string	The transparency flattener preset name.
<code>fontOptions</code>	<a href="#">PrintFontOptions</a>	The printing font options.
<code>jobOptions</code>	<a href="#">PrintJobOptions</a>	The printing job options.
<code>pageMarksOptions</code>	<a href="#">PrintPageMarksOptions</a>	The printing page marks options.
<code>paperOptions</code>	<a href="#">PrintPaperOptions</a>	The paper options.
<code>postScriptOptions</code>	<a href="#">PrintPostScriptOptions</a>	The printing PostScript options.
<code>PPDName</code>	string	The PPD name.
<code>printerName</code>	string	The printer name.
<code>printPreset</code>	string	The print style.

## Setting print options

```
// Creates a new document, adds symbols, specifies a variety of print options,  
// assigns each print option to a PrintOptions object,  
// then prints with those options  
  
// Create a new document and add some symbol items  
var docRef = documents.add();  
var y = docRef.height - 30;  
for(var i=0; i<(docRef.symbols.length); i++) {  
    symbolRef = docRef.symbols[i];  
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);  
    symbolItemRef1.top = y;  
    symbolItemRef1.left = 100;  
    y -= (symbolItemRef1.height + 10);  
}  
redraw();  
  
// Create multiple options and assign to PrintOptions  
var options = new PrintOptions();  
  
var colorOptions = new PrintColorManagementOptions();  
colorOptions.name = "ColorMatch RGB";  
colorOptions.intent = PrintColorIntent.SATURATIONINTENT;  
options.colorManagementOptions = colorOptions;  
  
var printJobOptions= new PrintJobOptions();  
printJobOptions.designation = PrintArtworkDesignation.ALLLAYERS;  
printJobOptions.reverse = true;  
options.jobOptions = printJobOptions;  
  
var coordinateOptions = new PrintCoordinateOptions();  
coordinateOptions.fitToPage = true;  
options.coordinateOptions = coordinateOptions;  
  
var flatOpts = new PrintFlattenerOptions();  
flatOpts .ClipComplexRegions = true;  
flatOpts .GradientResoluttion = 60;  
flatOpts .RasterizatonResotion = 60;  
options.flattenerOptions = flatOpts;  
  
// Print with options  
docRef.print(options);
```

# PrintPageMarksOptions

The options for printing page marks.

## PrintPageMarksOptions properties

Property	Value type	What it is
<code>bleedOffsetRect</code>	array of 4 numbers	The bleed offset rectangle.
<code>colorBars</code>	boolean	If <code>true</code> , enable printing of color bars. Default: <code>false</code>
<code>marksOffsetRect</code>	array of 4 numbers	The page marks offset rectangle.
<code>pageInfoMarks</code>	boolean	If <code>true</code> , page info marks printing is enabled. Default: <code>false</code>
<code>pageMarksType</code>	<a href="#">PageMarksTypes</a>	The page marks style. Default: <code>PageMarksType.Roman</code>
<code>registrationMarks</code>	boolean	If <code>true</code> , registration marks should be printed. Default: <code>false</code>
<code>trimMarks</code>	boolean	If <code>true</code> , trim marks should be printed. Default: <code>false</code>
<code>trimMarksWeight</code>	number (double)	Stroke weight of trim marks. Minimum: 0.0. Default: 0.125
<code>typename</code>	string	Read-only. The class name of the object.

## Setting page mark printing options

```
// Creates a PrintPageMarksOptions object, assigns it
// to a PrintOptions object, then prints the current document.

var docRef = activeDocument;
var pageMarkOptions= new PrintPageMarksOptions();
var options = new PrintOptions();
options.pageMarksOptions = pageMarkOptions;

pageMarkOptions.colorBars = true;
pageMarkOptions.pageInfoMarks = true;
pageMarkOptions.registrationMarks = true;
pageMarkOptions.trimMarks = true;
docRef.print(options);
```

# PrintPaperOptions

Information about the paper to be used in the print job.

## PrintPaperOptions properties

Property	Value type	What it is
<b>height</b>	number (double)	The custom height (in points) for using the custom paper. Default: 0.0
<b>name</b>	string	The paper's name.
<b>offset</b>	number (double)	Custom offset (in points) for using the custom paper. Default: 0.0
<b>transverse</b>	boolean	If <code>true</code> , transverse the artwork (rotate 90 degrees) on the custom paper. Default: <code>false</code>
<b>typename</b>	string	Read-only. The class name of the object.
<b>width</b>	number (double)	The custom width (in points) for using the custom paper. Default: 0.0

## Setting print paper options

```
// Creates a new document, adds a path item, applies a graphic style
// then prints with specified paper options

var docRef = documents.add();
var pathRef = docRef.pathItems.rectangle(600, 200, 200, 200);
docRef.graphicStyles[1].applyTo(pathRef);

var paperOpts = new PrintPaperOptions;
var printOpts = new PrintOptions;
printOpts.paperOptions = paperOpts;

var printerCount = printerList.length;
if (printerCount > 0) {
    // Print with the 1st paper from the 1st printer
    for (var i = 0; i < printerList.length; i++)
        if (printerList[i].printerInfo.paperSizes.length > 0)
            var printerRef = printerList[i];
    var paperRef = printerRef.printerInfo.paperSizes[0];
    if (printerRef.printerInfo.paperSizes.length > 0) {
        paperOpts.name = paperRef.name;
        printOpts.printerName = printerRef.name;

        docRef.print(printOpts);
    }
}
```

# PrintPostScriptOptions

Options for printing to a PostScript printer.

## PrintPostScriptOptions properties

Property	Value type	What it is
<code>binaryPrinting</code>	boolean	If <code>true</code> , printing should be in binary mode. Default: <code>false</code>
<code>compatibleShading</code>	boolean	If <code>true</code> , use PostScript Level 1-compatible gradient and gradient mesh printing. Default: <code>false</code>
<code>forceContinuousTone</code>	boolean	If <code>true</code> , force continuous tone. Default: <code>false</code>
<code>imageCompression</code>	<a href="#">PostScriptImageCompressionType</a>	The image compression type. Default: <code>PostScriptImageCompressionType.IMAGECOMPRESSIONNONE</code>
<code>negativePrinting</code>	boolean	If <code>true</code> , print in negative mode. Default: <code>false</code>
<code>postScriptLevel</code>	<a href="#">PrinterPostScriptLevelEnum</a>	The PostScript language level. Default: <code>PrinterPostScriptLevelEnum.LEVEL2</code>
<code>shadingResolution</code>	number (double)	The shading resolution. Range: 1.0 to 9600.0 Default: 300.0
<code>typename</code>	string	Read-only. The class name of the object.

## Setting PostScript printing options

```
// Prints current document with various postscript levels

// Create new postscript options object, assign to print options
var psOpts = new PrintPostScriptOptions();
var printOpts = new PrintOptions();
printOpts.postScriptOptions = psOpts;
// Assign PS level, print
psOpts.postScriptLevel = PrinterPostScriptLevelEnum.PSLEVEL2;
activeDocument.print(printOpts);

psOpts.postScriptLevel = PrinterPostScriptLevelEnum.PSLEVEL3;
activeDocument.print(printOpts);
```

# RasterEffectOptions

Specifies raster effects settings for the document. All properties are optional.

## RasterEffectOptions properties

Property	Value type	What it is
<b>antiAliasing</b>	boolean	If <code>true</code> , the image should be antialiased. Default: <code>false</code>
<b>clippingMask</b>	boolean	If <code>true</code> , a clipping mask is created for the image. Default: <code>false</code>
<b>colorModel</b>	<a href="#">RasterizationColorModel</a>	The color model for the rasterization. Default: <code>RasterizationColorModel.DEFAULTCOLORMODEL</code>
<b>convertSpotColors</b>	boolean	If <code>true</code> , all spot colors are converted to process colors for the image. Default: <code>false</code>
<b>padding</b>	number (double)	The amount of white space (in points) to be added around the object during rasterization. Default: <code>.0</code>
<b>resolution</b>	number (double)	The rasterization resolution in dots per inch (dpi). Range: 72.0 to 2400.0. Default: 300.0
<b>transparency</b>	boolean	If <code>true</code> , the image should use transparency. Default: <code>false</code>

# RasterItem

A bitmap art item in a document. A script can create a raster item from an external file, or by copying an existing raster item with the `duplicate` method.

## RasterItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>bitsPerChannel</code>	number (long)	Read-only. The number of bits per channel.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>boundingBox</code>	array of 4 numbers	The dimensions of the placed art item regardless of transformations.
<code>channels</code>	number (long)	Read-only. The number of channels.
<code>colorants</code>	array of string	Read-only. The colorants used in the raster art.
<code>colorizedGrayscale</code>	boolean	Read-only. If <code>true</code> , the raster art is a colorized grayscale image.
<code>contentVariable</code>	Variable	The content variable bound to the item.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>embedded</code>	boolean	If <code>true</code> , the raster art item is embedded in the illustration.
<code>file</code>	File	Read-only. The file containing the artwork.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>imageColorSpace</code>	<a href="#">ImageColorSpace</a>	Read-only. The color space of the raster image.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>matrix</code>	Matrix	The transformation matrix of the placed artwork.
<code>name</code>	string	The name of this item.

Property	Value type	What it is
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>overprint</code>	boolean	If <code>true</code> , the raster art overprints.
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>rasterItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>status</code>	<a href="#">RasterLinkState</a>	Status of the linked image.
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>transparent</code>	boolean	Read-only. If <code>true</code> , the raster art is transparent.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## RasterItem methods

Method	Parameter type	Returns	What it does
<b>colorize</b> ( <i>rasterColor</i> )	<a href="#">Color</a>	Nothing	Colorizes the raster item with a CMYK or RGB Color.
<b>duplicate</b> ( <i>[relativeObject]</i> <i>[,insertionLocation]</i> )	object <a href="#">ElementPlacement</a>	<a href="#">RasterItem</a>	Creates a duplicate of the selected object.
<b>move</b> ( <i>relativeObject</i> , <i>insertionLocation</i> )	object <a href="#">ElementPlacement</a>	<a href="#">RasterItem</a>	Moves the object.
<b>remove</b> ( <i></i> )		Nothing	Deletes this object.
<b>resize</b> ( <i>scaleX</i> , <i>scaleY</i> <i>[,changePositions]</i> <i>[,changeFillPatterns]</i> <i>[,changeFillGradients]</i> <i>[,changeStrokePattern]</i> <i>[,changeLineWidths]</i> <i>[,scaleAbout]</i> )	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <i>scaleX</i> is the horizontal scaling factor and <i>scaleY</i> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> ( <i>angle</i> <i>[,changePositions]</i> <i>[,changeFillPatterns]</i> <i>[,changeFillGradients]</i> <i>[,changeStrokePattern]</i> <i>[,rotateAbout]</i> )	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <i>angle</i> value is positive, clockwise if the value is negative.
<b>trace</b> ( <i></i> )		<a href="#">PluginItem</a>	Converts the raster art for this object to vector art, using default options. Reorders the raster art into the source art of a plug-in group, and converts it into a group of filled and/or stroked paths that resemble the original image.  Creates and returns a <code>pluginItem</code> object that references a <code>tracingObject</code> object.

Method	Parameter type	Returns	What it does
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

# RasterItems

A collection of `RasterItem` objects.

## RasterItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## RasterItems methods

Method	Parameter type	Returns	What it does
<code>getByName</code> (name)	string	<a href="#">RasterItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">RasterItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Creating a raster item

```
// Creates a new raster item in a new document from a raster file
// jpgFilePath contains the full path and file name of a jpg file

function createRasterItem(jpgFilePath) {
    var rasterFile = File(jpgFilePath);
    var myDoc = app.documents.add();
    var myPlacedItem = myDoc.placedItems.add();
    myPlacedItem.file = rasterFile;
    myPlacedItem.position = Array( 0, myDoc.height );
    myPlacedItem.embed();
}
```

## Finding and examining a raster item

```
// Examines the color space of the first raster item in the document and displays
// result in ESTK console

if ( app.documents.length > 0 && app.activeDocument.rasterItems.length > 0 ) {
    var rasterArt = app.activeDocument.rasterItems[0];

    switch ( rasterArt.imageColorSpace ) {
        case ImageColorSpace.CMYK:
            $.writeln("The color space of the first raster item is CMYK");
            break;

        case ImageColorSpace.RGB:
            $.writeln("The color space of the first raster item is RGB");
            break;

        case ImageColorSpace.GRAYSCALE:
            $.writeln("The color space of the first raster item is GRAYSCALE");
            break;
    }
}
```

# RasterizeOptions

Specifies options that may be supplied when rasterizing artwork. All properties are optional.

## RasterizeOptions properties

Property	Value type	What it is
<code>antiAliasingMethod</code>	<a href="#">AntiAliasingMethod</a>	The type of antialiasing method. Default: <code>AntiAliasingMethod.ARTOPTIMIZED</code>
<code>backgroundBlack</code>	boolean	If <code>true</code> , the rasterization is done against a black background (instead of white). Default: <code>false</code>
<code>clippingMask</code>	boolean	If <code>true</code> , a clipping mask should be created for the image. Default: <code>false</code>
<code>colorModel</code>	<a href="#">RasterizationColorModel</a>	The color model for the rasterization. Default: <code>RasterizationColorModel.DEFAULTCOLORMODEL</code>
<code>convertSpotColors</code>	boolean	If <code>true</code> , spot colors should be converted to process colors for the image. Default: <code>false</code>
<code>convertTextToOutlines</code>	boolean	If <code>true</code> , all text is converted to outlines before rasterization. Default: <code>false</code>
<code>includeLayers</code>	boolean	If <code>true</code> , the resulting image incorporates layer attributes (like opacity and blend mode). Default: <code>false</code>
<code>padding</code>	number (double)	The amount of white space (in points) to be added around the object during rasterization. Default: <code>.0</code>
<code>resolution</code>	number (double)	The rasterization resolution in dots per inch (dpi). Range: 72.0 to 2400.0. Default: 300.0
<code>transparency</code>	boolean	If <code>true</code> , the image should use transparency. Default: <code>false</code>

# RGBColor

An RGB color specification, used to apply an RGB color to a layer or art item.

If the color space of a document is RGB and you specify the color value for a page item in that document using CMYK, Illustrator will translate the CMYK color specification into an RGB color specification. The same thing happens if the document's color space is CMYK and you specify colors using RGB. Since this translation can lose information, you should specify colors using the class that matches the document's actual color space.

## RGBColor properties

Property	Value type	What it is
<b>blue</b>	number (double)	The blue color value. Range: 0.0 to 255.0
<b>green</b>	number (double)	The green color value. Range: 0.0 to 255.0
<b>red</b>	number (double)	The red color value. Range: 0.0 to 255.0
<b>typename</b>	string	Read-only. The class name of the referenced object.

## Setting an RGB color

```
// Sets the default fill color in the current document to yellow.

if ( app.documents.length > 0 ) {
    // Define the new color
    var newRGBColor = new RGBColor();

    newRGBColor.red = 255;
    newRGBColor.green = 255;
    newRGBColor.blue = 0;
    app.activeDocument.defaultFillColor = newRGBColor;
}
```

# Screen

Associates a color separation screen with information to be used for printing.

## Screen properties

Property	Value type	What it is
<code>name</code>	string	The color separation screen name.
<code>screenInfo</code>	<a href="#">ScreenInfo</a>	The color separation screen information.
<code>typename</code>	string	Read-only. The class name of the object.

# ScreenInfo

Contains information about the angle and frequency of the color separation screen to be used for printing.

## ScreenInfo properties

Property	Value type	What it is
<b>angle</b>	number (double)	The screen's angle in degrees.
<b>defaultScreen</b>	boolean	If <code>true</code> , it is the default screen.
<b>frequency</b>	number (double)	The screen's frequency.
<b>typename</b>	string	Read-only. The class name of the object.

## Getting screen information

```
// Displays in a new text frame, the name, angle and frequency
// of each screen list item

var sInfo = "";
var docRef = documents.add();
if(PPDFileList.length == 0){
    var sInfo = "\r\t\tEmpty PPDFileList"
}
else{
    var ppdRef = PPDFileList[0];
    var ppdInfoRef = ppdRef.PPDInfo;
    sInfo += "\r\t\tScreen Objects for 1st PPD File:\r";
    sInfo += "\t\t" + ppdRef.name;
    var iScreens = ppdInfoRef.screenList.length;
    if(iScreens > 0){
        for(var c=0; c<iScreens; c++) {
            var screenRef = ppdInfoRef.screenList[c];
            sInfo += "\r\t\t";
            sInfo += screenRef.name;

            var screenInfoRef = screenRef.screenInfo;
            sInfo += ", Angle = ";
            sInfo += screenInfoRef.angle;
            sInfo += ", Frequency = ";
            sInfo += screenInfoRef.frequency;
            sInfo += "\r";
        }
    }
    else{
        sInfo += "\r\t\tEmpty ScreenList";
    }
}
var textRef = docRef.textFrames.add();
textRef.textRange.characterAttributes.size = 12;
textRef.contents = sInfo;
textRef.top = 600;
textRef.left = 30;
redraw();
```

# ScreenSpotFunction

Contains information about a color separation screen spot function, including its definition in PostScript language code.

## ScreenSpotFunction properties

Property	Value type	What it is
<code>name</code>	string	The color separation screen spot function name.
<code>spotFunction</code>	string	The spot function expressed in PostScript commands.
<code>typename</code>	string	Read-only. The class name of the object.

## Finding screen spot functions

```
// Displays in a new text frame, the screen spot functions for the 1st PPD file.

var docRef = documents.add();
if(PPDFileList.length == 0){
    var sInfo = "\r\t\tEmpty PPDFileList"
}
else{
    var ppdRef = PPDFileList[0];
    var ppdInfoRef = ppdRef.PPDInfo;
    var sInfo = "\r\t\tScreenSpotFunctions for 1st PPD File:\r";
    sInfo += "\t\t" + ppdRef.name + "\r";
    var iScreenSpots = ppdInfoRef.screenSpotFunctionList.length;
    if(iScreenSpots > 0 ){
        for(var n=0; n<iScreenSpots; n++) {
            var screenSpotRef = ppdInfoRef.screenSpotFunctionList[n];
            sInfo += "\t\t";
            sInfo += screenSpotRef.name;
            sInfo += ", spotFunction: ";
            sInfo += screenSpotRef.spotFunction;
            sInfo += "\r";
        }
    }
    else{
        sInfo += "\t\tEmpty ScreenSpotFunctionList";
    }
}
var textRef = docRef.textFrames.add();
textRef.textRange.characterAttributes.size = 12;
textRef.contents = sInfo;
textRef.top = 600;
textRef.left = 30;
redraw();
```

# Spot

A custom color definition contained in a [SpotColor](#) object.

If no properties are specified when creating a spot, default values are provided. However, if specifying the color, you must use the same color space as the document, either CMYK or RGB. Otherwise, an error results. The new spot is added to the end of the swatches list in the Swatches palette.

## Spot properties

Property	Value type	What it is
<code>color</code>	<a href="#">Color</a>	The color information for this spot color.
<code>colorType</code>	<a href="#">ColorModel</a>	The color model for this custom color.
<code>name</code>	string	The spot color's name.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this spot color.
<code>spotKind</code>	<a href="#">SpotColorKind</a>	Read-only. The kind of spot color (RGB, CMYK or LAB). This is the name of the color kind contained in the spot object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Spot methods

Method	Parameter type	Returns	What it does
<code>getInternalColor</code> ( )		Color components	Gets the internal color of a spot.
<code>remove</code> ( )		Nothing	Deletes this object.

## Creating a new spot color

```
// Creates a new spot color in the current document, then applies an 80% tint to the
color

if ( app.documents.length > 0 ){
  var doc = app.activeDocument;
  // Create the new spot
  var newSpot = doc.spots.add();
  // Define the new color value
  var newColor = new CMYKColor();
  newColor.cyan = 35;
  newColor.magenta = 0;
  newColor.yellow = 50;
  newColor.black = 0;
  // Define a new SpotColor with an 80% tint
  // of the new Spot's color. The spot color can then
  // be applied to an art item like any other color.
  newSpot.name = "Pea-Green";
  newSpot.colorType = ColorModel.SPOT;
  newSpot.color = newColor;
  var newSpotColor = new SpotColor();
  newSpotColor.spot = newSpot;
  newSpotColor.tint = 80;
}
```

## SpotColor

Color class used to apply the color value of a spot at a specified tint value. Can be used in any property that takes a color object.

### SpotColor properties

Property	Value type	What it is
<code>spot</code>	<a href="#">Spot</a>	A reference to the spot color object that defines the color.
<code>tint</code>	number (double)	The tint of the color. Range: 0.0 to 100.0
<code>typename</code>	string	Read-only. The class name of the referenced object.

# Spots

A collection of `SpotColor` objects in a document.

## Spots properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Spots methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Spot</a>	Creates a new object.
<code>getByName</code> (name)	string	<a href="#">Spot</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">Spot</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Removing spot colors

```
// Deletes all spots colors from the current document

if ( app.documents.length > 0 ) {
var spotCount = app.activeDocument.spots.length;
  if (spotCount > 0) {
    app.activeDocument.spots.removeAll();
  }
}
```

## Creating and applying spot colors

```
// Defines and applies a new spot color in the current document then applies the color
to
// the first path item

if ( app.documents.length > 0 && app.activeDocument.pathItems.length > 0 ) {
    // Define the new color value
    newRGBColor = new RGBColor();
    newRGBColor.red = 255;
    newRGBColor.green = 0;
    newRGBColor.blue = 0;

    // Create the new spot
    var newSpot = app.activeDocument.spots.add();
    // Define the new SpotColor as 80% of the RGB color
    newSpot.name = "Scripted Red spot";
    newSpot.tint = 80;
    newSpot.color = newRGBColor;

    // Apply a 50% tint of the new spot color to the frontmost path item.

    // Create a spotcolor object, set the tint value,
    var newSpotColor = new SpotColor();
    newSpotColor.spot = newSpot;
    newSpotColor.tint = 50;
    // Use the spot color to set the fill color
    var frontPath = app.activeDocument.pathItems[0];
    frontPath.filled = true;
    frontPath.fillColor = newSpotColor;
}
```

# Story

A contiguous block of text as specified by a text range. A story can contain one or more text frames; if there is more than one, the multiple text frames are linked together to form a single story.

## Story properties

Property	Value type	What it is
<code>characters</code>	<a href="#">Characters</a>	Read-only. All the characters in this story.
<code>insertionPoints</code>	<a href="#">InsertionPoints</a>	Read-only. All the insertion points in this story.
<code>length</code>	number (long)	Read-only. The number of characters in the story.
<code>lines</code>	<a href="#">Lines</a>	Read-only. All the lines in this story.
<code>paragraphs</code>	<a href="#">Paragraphs</a>	Read-only. All the paragraphs in this story.
<code>parent</code>	object	Read-only. The object's container.
<code>textFrames</code>	<a href="#">TextFrameItems</a>	Read-only. The text frame items in this story.
<code>textRange</code>	<a href="#">TextRange</a>	Read-only. The text range of the story.
<code>textRanges</code>	<a href="#">TextRanges</a>	Read-only. All the text ranges in the story.
<code>textSelection</code>	array of <a href="#">TextRange</a>	Read-only. The selected text ranges in the story.
<code>typename</code>	string	Read-only. The class name of the object.
<code>words</code>	<a href="#">Words</a>	Read-only. All the words in the story.

## Threading text frames into stories

```
// Creates 1 story that flows through 2 text frames and another story that
// is displayed in a 3rd text frame

// Create a new document and add 2 area TextFrames
var docRef = documents.add();
var itemRef1 = docRef.pathItems.rectangle(600, 200, 50, 30);
var textRef1 = docRef.textFrames.areaText(itemRef1);
textRef1.selected = true;

// create 2nd text frame and link it the first
var itemRef2 = docRef.pathItems.rectangle(550, 300, 50, 200);
var textRef2 = docRef.textFrames.areaText(itemRef2, TextOrientation.HORIZONTAL,
textRef1);
textRef2.selected = true;

// Add enough text to the 1st TextFrame to
// cause it to flow to the 2nd TextFrame.
textRef1.contents = "This is two text frames linked together as one story";
redraw();

// Create a 3rd text frame and count the stories
var textRef3 = docRef.textFrames.add();
textRef3.contents = "Each unlinked textFrame adds a new story."
textRef3.top = 650;
textRef3.left = 200;
redraw();
```

## Stories

A collection of `Story` objects in a document.

### Stories properties

Property	Value type	What it is
<code>length</code>	number	Read-only. Number of elements in the collection.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

### Stories methods

Method	Parameter type	Returns	What it does
<code>index</code> (itemKey)	string, number	<a href="#">Story</a>	Gets an element from the collection.

# Swatch

A color swatch definition contained in a document. The swatches correspond to the swatch palette in the Illustrator user interface. A script can create a new swatch. The swatch can hold all types of color data, such as pattern, gradient, CMYK, RGB, gray, and spot.

## Swatch properties

Property	Value type	What it is
<code>color</code>	<a href="#">Color</a>	The color information for this swatch.
<code>name</code>	string	The swatch's name.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this swatch.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Swatch methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Deletes this object.

## Modifying a swatch

```
// Changes the name of the last swatch

if ( app.documents.length > 0 && app.activeDocument.swatches.length > 0 ) {
    var lastIndex = app.activeDocument.swatches.length - 1;
    var lastSwatch = app.activeDocument.swatches[lastIndex];
    lastSwatch.name = "TheLastSwatch";
}
```

# Swatches

A collection of `Swatch` objects in a document.

## Swatches properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Swatches methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Swatch</a>	Creates a new <code>Swatch</code> object.
<code>getByName</code> (name)	string	<a href="#">Swatch</a>	Gets the first element in the collection with the specified name.
<code>getSelected</code> ( )		List of <a href="#">Swatch</a>	Gets selected swatches in the document.
<code>index</code> (itemKey)	string, number	<a href="#">Swatch</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Finding and deleting a swatch

```
// Deletes swatch 4 from the current document

if ( app.documents.length > 0 ) {
  if ( app.activeDocument.swatches.length > 4 )
  {
    swatchToDelete = app.activeDocument.swatches[3];
    swatchToDelete.remove();
  }
}
```

# SwatchGroup

A group of `Swatch` objects.

## SwatchGroup properties

Property	Value type	What it is
<code>name</code>	string	The name of the swatch group.
<code>parent</code>	object	Read-only. The object that contains the symbol object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## SwatchGroup methods

Method	Parameter type	Returns	What it does
<code>addSpot</code> (spot)	<a href="#">Spot</a>	Nothing	Adds a spot swatch to the swatch group.
<code>addSwatch</code> (swatch)	<a href="#">Swatch</a>	Nothing	Adds a swatch to the swatch group.
<code>getAllSwatches</code> ( )		List of <a href="#">Swatch</a>	Gets a list of all swatches in the swatch group.
<code>remove</code> ( )		Nothing	Deletes this object.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

# SwatchGroups

A collection of `SwatchGroup` objects.

## SwatchGroups properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## SwatchGroups methods

Method	Parameter type	Returns	What it does
<code>add</code>		<a href="#">SwatchGroup</a>	Creates a swatch group.
<code>getByName</code> (name)	string	<a href="#">SwatchGroup</a>	Gets the first element in the collection with the specified name.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

# Symbol

An art item that is stored in the Symbols palette, and can be reused one or more times in the document without duplicating the art data. Symbols are contained in documents. Instances of `Symbol` in a document are associated with `SymbolItem` objects, which store the art object properties.

## Symbol properties

Property	Value type	What it is
<code>name</code>	string	The symbol's name.
<code>parent</code>	object	Read-only. The object that contains the symbol object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Symbol methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( )		<a href="#">Symbol</a>	Create a duplicate of this object.
<code>remove</code> ( )		Nothing	Deletes this object.

# SymbolItem

An art item made reusable by adding it to the Symbols palette. A `SymbolItem` is linked to the `Symbol` from which it was created and changes if you modify the associated `Symbol` object.

## SymbolItem properties

Property	Value type	What it is
<code>artworkKnockout</code>	<a href="#">KnockoutState</a>	Is this object used to create a knockout, and if so, what kind of knockout.
<code>blendingMode</code>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<code>controlBounds</code>	array of 4 numbers	Read-only. The bounds of the object including stroke width and controls.
<code>editable</code>	boolean	Read-only. If <code>true</code> , this item is editable.
<code>geometricBounds</code>	array of 4 numbers	Read-only. The bounds of the object excluding stroke width.
<code>height</code>	number (double)	The height of the group item.
<code>hidden</code>	boolean	If <code>true</code> , this item is hidden.
<code>isIsolated</code>	boolean	If <code>true</code> , this object is isolated.
<code>layer</code>	<a href="#">Layer</a>	Read-only. The layer to which this item belongs.
<code>left</code>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<code>locked</code>	boolean	If <code>true</code> , this item is locked.
<code>name</code>	string	The name of this item.
<code>note</code>	string	The note assigned to this item.
<code>opacity</code>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<code>parent</code>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>position</code>	array of 2 numbers	The position (in points) of the top left corner of the <code>SymbolItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<code>selected</code>	boolean	If <code>true</code> , this item is selected.
<code>sliced</code>	boolean	If <code>true</code> , the item sliced. Default: <code>false</code>
<code>symbol</code>	<a href="#">Symbol</a>	The symbol that was used to create this <code>SymbolItem</code> .
<code>tags</code>	<a href="#">Tags</a>	Read-only. The tags contained in this item.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).

Property	Value type	What it is
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>uRL</code>	string	The value of the Adobe URL tag assigned to this item.
<code>visibilityVariable</code>	Variable	The visibility variable bound to the item.
<code>visibleBounds</code>	array of 4 numbers	Read-only. The visible bounds of the item including stroke width.
<code>width</code>	number (double)	The width of the item.
<code>wrapInside</code>	boolean	If <code>true</code> , the text frame object should be wrapped inside this object.
<code>wrapOffset</code>	number (double)	The offset to use when wrapping text around this object.
<code>wrapped</code>	boolean	If <code>true</code> , wrap text frame objects around this object (text frame must be above the object).
<code>zOrderPosition</code>	number	Read-only. The position of this item within the stacking order of the group or layer ( <code>parent</code> ) that contains the item.

## SymbolItem methods

Method	Parameter type	Returns	What it does
<code>duplicate</code> ( <code>relativeObject</code> [, <code>insertionLocation</code> ])	object <a href="#">ElementPlacement</a>	<a href="#">SymbolItem</a>	Creates a duplicate of the selected object.
<code>move</code> ( <code>relativeObject</code> , <code>insertionLocation</code> )	object <a href="#">ElementPlacement</a>	<a href="#">SymbolItem</a>	Moves the object.
<code>remove</code> ( )		Nothing	Deletes this object.
<code>resize</code> ( <code>scaleX</code> , <code>scaleY</code> [, <code>changePositions</code> ] [, <code>changeFillPatterns</code> ] [, <code>changeFillGradients</code> ] [, <code>changeStrokePattern</code> ] [, <code>changeLineWidths</code> ] [, <code>scaleAbout</code> ])	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.

Method	Parameter type	Returns	What it does
<b>rotate</b> (angle [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,rotateAbout])	number (double) boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the angle value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [,changePositions] [,changeFillPatterns] [,changeFillGradients] [,changeStrokePattern] [,changeLineWidths] [,transformAbout])	Matrix boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [,deltaY] [,transformObjects] [,transformFillPatterns] [,transformFillGradients] [,transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

# SymbolItems

A collection of `SymbolItem` objects in the document.

## SymbolItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## SymbolItems methods

Method	Parameter type	Returns	What it does
<code>add</code> (symbol)	<a href="#">Symbol</a>	<a href="#">SymbolItem</a>	Creates an instance of the specified symbol.
<code>getByName</code> (name)	string	<a href="#">SymbolItem</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">SymbolItem</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

## Creating symbol items

```
// Creates a new document then adds each of
// the documents symbols to the document

var docRef = documents.add();
var y = 750;
var x = 25;
var iCount = docRef.symbols.length;
for(var i=0; i<iCount; i++) {
    symbolRef = docRef.symbols[i];
    symbolItemRef1 = docRef.symbolItems.add(symbolRef);
    symbolItemRef1.top = y;
    symbolItemRef1.left = x;
    y=(symbolItemRef1.height + 20);
    if( (y) <= 60 ) {
        y = 750;
        x+= 190;
    }
}
```

# Symbols

The collection of `Symbol` objects in the document.

## Symbols properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Symbols methods

Method	Parameter type	Returns	What it does
<code>add</code> (sourceArt, [registrationPoint])	<a href="#">PageItem</a> <a href="#">SymbolRegistrationPoint</a>	<a href="#">Symbol</a>	Returns a symbol object created from the source art item, any of the following:  <a href="#">CompoundPathItems</a> <a href="#">GroupItems</a> <a href="#">MeshItems</a> <a href="#">NonNativeItems</a> <a href="#">PageItems</a> <a href="#">PathItems</a> <a href="#">RasterItems</a> <a href="#">SymbolItems</a> <a href="#">TextFrameItems</a>  The default registration point is <code>SymbolCenterPoint</code> .
<code>index</code> (itemKey)	string, number	<a href="#">Symbol</a>	Gets an element from the collection.
<code>getByName</code> (name)	string	<a href="#">Symbol</a>	Gets the first element in the collection with the specified name.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

## Creating a symbol

```
// Creates a path item from each graphic style
// then adds each item as a new symbol

var docRef = documents.add();
var y = 750;
var x = 25;

var iCount = docRef.graphicStyles.length;
for(var i=0; i<iCount; i++) {
    var pathRef = docRef.pathItems.rectangle( y, x, 20, 20 );
    docRef.graphicStyles[i].applyTo(pathRef);
    // are we at bottom?
    if( (y-=60) <= 60 ) {
        y = 750; // go back to the top.
        x+= 200
    }
    redraw();
    docRef.symbols.add(pathRef);
}
```

# TabStopInfo

Information about the alignment, position, and other details for a tab stop in a `ParagraphAttributes` object.

## TabStopInfo properties

Property	Value type	What it is
<code>alignment</code>	<a href="#">TabStopAlignment</a>	The alignment of the tab stop. Default: <code>Left</code>
<code>decimalCharacter</code>	string	The character used for decimal tab stops. Default: <code>.</code>
<code>leader</code>	string	The leader dot character.
<code>position</code>	number (double)	The position of the tab stop expressed in points. Default: <code>0.0</code>
<code>typename</code>	string	Read-only. The class name of the object.

## Displaying tab stop information

```
// Displays tab stop information found in each text frame
// of current document, if any.

docRef = app.activeDocument;
var tabRef;
var sData = "Tab Stops Found \rTabStop Leader\t\tTabStop Position\r";
var textRef = docRef.textFrames;

for( var i=0 ; i < textRef.length; i++ ) {
    // Get all paragraphs in the textFrames
    paraRef = textRef[i].paragraphs;
    for ( p=0 ; p < paraRef.length ; p++ ) {
        // Get para attributes for all textRanges in paragraph
        attrRef = paraRef[p].paragraphAttributes;
        tabRef = attrRef.tabStops;
        if ( tabRef.length > 0 ) {
            for(var t=0; t<tabRef.length; t++){
                sData += "\t" + tabRef[t].leader + "\t\t";
                sData += "\t\t" + tabRef[t].position + "\r";
            } // end for
        } // end if
    } // end for
} // end for
var newTF = docRef.textFrames.add();
newTF.contents = sData;
newTF.top = 400;
newTF.left = 100;
redraw();
```

# Tag

A label associated with a specific piece of artwork. Tags allows you to assign an unlimited number of key-value pairs to any page item in a document.

## Tag properties

Property	Value type	What it is
<code>name</code>	string	The tag's name.
<code>parent</code>	object	Read-only. The object that contains this tag.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>value</code>	string	The data stored in this tag.

## Tag methods

Method	Parameter type	Returns	What it does
<code>remove</code> <code>()</code>		Nothing	Deletes this object.

## Using tags

```
// Finds the tags associated with the selected art item,
// show names and values in a separate document

if ( app.documents.length > 0 ) {
  doc = app.activeDocument;
  if ( doc.selection.length > 0 ) {
    for ( i = 0; i < selection.length; i++ ) {
      selectedArt = selection[0];
      tagList = selectedArt.tags;
      if (tagList.length == 0) {
        var tempTag = tagList.add();
        tempTag.name = "OneWord";
        tempTag.value = "anything you want";
      }
      // Create a document and add a line of text per tag
      reportDocument = app.documents.add();
      top_offset = 400;
      for ( i = 0; i < tagList.length; i++ ) {
        tagText = tagList[i].value;
        newItem = reportDocument.textFrames.add();
        newItem.contents = "Tag: (" + tagList[i].name +
          " , " + tagText + ")";
        newItem.position = Array(100, top_offset);
        newItem.textRange.size = 24;
        top_offset = top_offset - 20;
      }
    }
  }
}
```

```
}  
}
```

# Tags

A collection of `Tag` objects.

## Tags properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Tags methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">Tag</a>	Creates a new <code>Tag</code> object.
<code>getByName</code> (name)	string	<a href="#">Tag</a>	Gets the first element in the collection with the specified name.
<code>index</code> (itemKey)	string, number	<a href="#">Tag</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

## Setting tag values

```
// Adds tags to all RasterItems and PlacedItems in the current document

if ( app.documents.length > 0 ) {
    doc = app.activeDocument;
    if ( doc.placedItems.length + doc.rasterItems.length > 0 ) {
        for ( i = 0; i < doc.pageItems.length; i++ ) {
            imageArt = doc.pageItems[i];
            if ( imageArt.typename == "PlacedItem"
                || imageArt.typename == "RasterItem" ) {
                // Create a new Tag with the name AdobeURL and the
                // value of the www link
                urlTAG = imageArt.tags.add();
                urlTAG.name = "AdobeWebSite";
                urlTAG.value = "http://www.adobe.com/";
            }
        }
    }
    else {
        alert( "No placed or raster items in the document" );
    }
}
```

# TextFont

Information about a font in the document, found in a `CharacterAttributes` object.

## TextFont properties

Property	Value type	What it is
<code>family</code>	string	Read-only. The font's family name.
<code>name</code>	string	Read-only. The font's full name.
<code>parent</code>	object	Read-only. The object's container.
<code>style</code>	string	Read-only. The font's style name.
<code>typename</code>	string	Read-only. The class name of the object.

## Setting the font of text

```
// Sets the font of all the text in the document to the first font
if ( app.documents.length > 0 ) {
  // Iterate through all text art and apply font 0
  for ( i = 0; i < app.activeDocument.textFrames.length; i++ ) {
    textArtRange = app.activeDocument.textFrames[i].textRange;
    textArtRange.characterAttributes.textFont = app.textFonts[0];
  }
}
```

# TextFonts

A collection of `TextFont` objects.

## TextFonts properties

Property	Value type	What it is
<code>length</code>	number	Read-only. Number of elements in the collection.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

## TextFonts methods

Method	Parameter type	Returns	What it does
<code>index</code> (itemKey)	string, number	<a href="#">TextFont</a>	Get an element from the collection.
<code>getByName</code> (name)	string	<a href="#">TextFont</a>	Get the first element in the collection with the provided name.

## Finding fonts

```
// Creates a new A3 sized document and display a list of available fonts until the
document is full.
```

```
var edgeSpacing = 10;
var columnSpacing = 230;
var docPreset = new DocumentPreset;
docPreset.width = 1191.0;
docPreset.height = 842.0

var docRef = documents.addDocument(DocumentColorSpace.CMYK, docPreset);
var sFontNames = "";
var x = edgeSpacing;
var y = (docRef.height - edgeSpacing);

var iCount = textFonts.length;
for(var i=0; i<iCount; i++) {
    sFontName = textFonts[i].name;
    sFontName += " ";
    sFontNames = sFontName + textFonts[i].style;

    var textRef = docRef.textFrames.add();
    textRef.textRange.characterAttributes.size = 10;
    textRef.contents = sFontNames;
    textRef.top = y;
    textRef.left = x;

    // check whether the text frame will go off the edge of the document
```

```
    if ((x + textRef.width) > docRef.width) {
        textRef.remove();
        iCount = i;
        break;
    }
    else {
        // display text frame
        textRef.textRange.characterAttributes.textFont =
textFonts.getByIndex(i);
        redraw();

        if( (y -= (textRef.height)) <= 20 ) {
            y = (docRef.height - edgeSpacing);
            x += columnSpacing;
        }
    }
}
```

# TextFrameItem

The basic art item for displaying text. From the user interface, this is text created with the Text tool. There are three types of text art in Illustrator: point text, path text, and area text. The type is indicated by the text frame's [kind](#) property.

When you create a text frame, you also create a [Story](#) object. However, threading text frames combines the frames into a single story object. To thread frames, use the [nextFrame](#) or [previousFrame](#) property.

## TextFrameItem properties

Property	Value type	What it is
<code>anchor</code>	array of 2 numbers	The position of the anchor point, the start of the base line for point text.
<code>antialias</code>	<a href="#">TextAntialias</a>	The type of anti-aliasing to use in the text.
<code>characters</code>	<a href="#">Characters</a>	Read-only. All the characters in this text frame.
<code>columnCount</code>	number (long)	The column count in the text frame (area text only).
<code>columnGutter</code>	number (double)	The column gutter in the text frame (area text only).
<code>contents</code>	string	The text string.
<code>contentVariable</code>	Variable	The content variable bound to this text frame item.
<code>endTValue</code>	number (double)	The end position of text along a path, as a value relative to the path's segments (path text only).
<code>flowLinksHorizontally</code>	boolean	If <code>true</code> , flow text between linked frames horizontally first (area text only).
<code>insertionPoints</code>	<a href="#">InsertionPoints</a>	Read-only. All the insertion points in this text range.
<code>kind</code>	<a href="#">TextType</a>	Read-only. The type of a text frame item (area, path or point).
<code>lines</code>	<a href="#">Lines</a>	Read-only. All the lines in this text frame.
<code>matrix</code>	Matrix	Read-only. The transformation matrix for this text frame.
<code>nextFrame</code>	<a href="#">TextFrameItem</a>	The linked text frame following this one.
<code>opticalAlignment</code>	boolean	If <code>true</code> , the optical alignment feature is active.
<code>orientation</code>	<a href="#">TextOrientation</a>	The orientation of the text.
<code>paragraphs</code>	<a href="#">Paragraphs</a>	Read-only. All the paragraphs in this text frame.
<code>parent</code>	<a href="#">Layer</a> Or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<code>previousFrame</code>	<a href="#">TextFrameItem</a>	The linked text frame preceding this one.
<code>rowCount</code>	number (long)	The row count in the text frame (area text only).

Property	Value type	What it is
<code>rowGutter</code>	number (double)	The row gutter in the text frame (area text only).
<code>spacing</code>	number (double)	The amount of spacing.
<code>startTValue</code>	number (double)	The start position of text along a path, as a value relative to the path's segments (path text only).
<code>story</code>	<a href="#">Story</a>	Read-only. The story to which the text frame belongs.
<code>textPath</code>	<a href="#">TextPath</a>	The path item associated with the text frame. Note: Valid only when <code>kind</code> is area or path.
<code>textRange</code>	<a href="#">TextRange</a>	Read-only. The text range of the text frame.
<code>textRanges</code>	<a href="#">TextRanges</a>	Read-only. All the text in this text frame.
<code>textSelection</code>	array of <a href="#">TextRange</a>	Read-only. The selected text range(s) in the text frame.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>words</code>	<a href="#">Words</a>	Read-only. All the words in this text frame.

## TextFrameItem methods

Method	Parameter type	Returns	What it does
<code>convertAreaObjectToPointObject</code> ( )		<a href="#">TextFrameItem</a>	Converts the area-type text frame to a point-type text frame.
<code>convertPointObjectToAreaObject</code> ( )		<a href="#">TextFrameItem</a>	Converts the point-type text frame to an area-type text frame.
<code>createOutline</code> ( )		<a href="#">GroupItem</a>	Converts the text in the text frame to outlines.
<code>duplicate</code> ( [relativeObject] [, insertionLocation] )	object <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Creates a duplicate of the selected object.
<code>move</code> ( relativeObject, insertionLocation )	object <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Moves the object.
<code>remove</code> ( )		Nothing	Deletes this object.

Method	Parameter type	Returns	What it does
<b>resize</b> (scaleX, scaleY [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, scaleAbout])	number (double) number (double) boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Scales the art item where <code>scaleX</code> is the horizontal scaling factor and <code>scaleY</code> is the vertical scaling factor. 100.0 = 100%.
<b>rotate</b> (angle [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, rotateAbout])	number (double) boolean boolean boolean boolean <a href="#">Transformation</a>	Nothing	Rotates the art item relative to the current rotation. The object is rotated counter-clockwise if the <code>angle</code> value is positive, clockwise if the value is negative.
<b>transform</b> (transformationMatrix [, changePositions] [, changeFillPatterns] [, changeFillGradients] [, changeStrokePattern] [, changeLineWidths] [, transformAbout])	Matrix boolean boolean boolean boolean number (double) <a href="#">Transformation</a>	Nothing	Transforms the art item by applying a transformation matrix.
<b>translate</b> ([deltaX] [, deltaY] [, transformObjects] [, transformFillPatterns] [, transformFillGradients] [, transformStrokePatterns])	number (double) number (double) boolean boolean boolean boolean	Nothing	Repositions the art item relative to the current position, where <code>deltaX</code> is the horizontal offset and <code>deltaY</code> is the vertical offset.
<b>zOrder</b> (zOrderCmd)	<a href="#">ZOrderMethod</a>	Nothing	Arranges the art item's position in the stacking order of the group or layer (parent) of this object.

## Rotate a text art item

```
// Duplicates and rotates the selected text art item 5 times

if ( app.documents.length > 0 ) {
    selectedItems = app.activeDocument.selection;
    // make sure something is selected.
    if ( selectedItems.length > 0 ) {
        // The selection must be a text art item
        if ( selectedItems[0].typename == "TextFrame" ) {
            // Get the parent of the text art so new text art items
            // can be inserted in the same group or layer
            dupSrc = selectedItems[0];
            textContainer = dupSrc.parent;
            // Create 5 new versions of the text art each rotated a bit
            for ( i = 1; i <= 5; i++ ) {
                dupText = dupSrc.duplicate( textContainer,
                    ElementPlacement.PLACEATEND );
                dupText.rotate(180 * i/6);
            }
        }
    }
}
```

# TextFrameItems

A collection of [TextFrameItem](#) objects.

## TextFrameItems properties

Property	Value type	What it is
<code>length</code>	number	Read-only. Number of elements in the collection.
<code>parent</code>	object	Read-only. The object's container.
<code>typename</code>	string	Read-only. The class name of the object.

## TextFrameItems methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		<a href="#">TextFrameItem</a>	Creates a point text frame item.
<code>areaText</code> (textPath [, orientation] [, baseFrame] [, postFix])	<a href="#">PathItem</a> <a href="#">TextOrientation</a> <a href="#">TextFrameItem</a> boolean	<a href="#">TextFrameItem</a>	Creates an area text frame item.
<code>getByName</code> (name)	string	<a href="#">TextFrameItem</a>	Gets the first element in the collection with the provided name.
<code>index</code> (itemKey)	string, number	<a href="#">TextFrameItem</a>	Gets an element from the collection.
<code>pathText</code> (textPath [, startTValue] [, endTValue] [, orientation] [, baseFrame] [, postFix])	<a href="#">PathItem</a> number (double) number (double) <a href="#">TextOrientation</a> <a href="#">TextFrameItem</a> boolean	<a href="#">TextFrameItem</a>	Creates an on-path text frame item.
<code>pointText</code> (anchor [, orientation])	array of 2 numbers <a href="#">TextOrientation</a>	<a href="#">TextFrameItem</a>	Creates a point text frame item.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the object.

## Creating and modifying text frames

```
// Creates a document with text frames displaying path, area and point
// text, changes the content of each frame then deletes the 2nd frame

// create a new document
var docRef = documents.add();
// create 3 new textFrames (area, line, point)
// Area Text
var rectRef = docRef.pathItems.rectangle(700, 50, 100, 100);
var areaTextRef = docRef.textFrames.areaText(rectRef);
areaTextRef.contents = "TextFrame #1";
areaTextRef.selected = true;

// Line Text
var lineRef = docRef.pathItems.add();
lineRef.setEntirePath( Array(Array(200, 700), Array(300, 550) ) );
var pathTextRef = docRef.textFrames.pathText(lineRef);
pathTextRef.contents = "TextFrame #2";
pathTextRef.selected = true;

// Point Text
var pointTextRef = docRef.textFrames.add();
pointTextRef.contents = "TextFrame #3";
pointTextRef.top = 700;
pointTextRef.left = 400;
pointTextRef.selected = true;
redraw();

// count the TextFrames
var iCount = docRef.textFrames.length;
var sText = "There are " + iCount + " TextFrames.\r"
sText += "Changing contents of each TextFrame.";

// change the content of each
docRef.textFrames[0].contents = "Area TextFrame.";
docRef.textFrames[1].contents = "Path TextFrame.";
docRef.textFrames[2].contents = "Point TextFrame.";
redraw();

docRef.textFrames[1].remove();
redraw();

// count again
var iCount = docRef.textFrames.length;
```

# TextPath

A path or list of paths for area or path text. A path consists of path points that define its geometry.

## TextPath properties

Property	Value type	What it is
<b>area</b>	number (double)	Read-only. The area of this path in square points. If the area is negative, the path is wound counterclockwise. Self-intersecting paths can contain sub-areas that cancel each other out, which makes this value zero even though the path has apparent area.
<b>blendingMode</b>	<a href="#">BlendModes</a>	The blend mode used when compositing an object.
<b>clipping</b>	boolean	If <code>true</code> , this path should be used as a clipping path.
<b>closed</b>	boolean	If <code>true</code> , this path is closed.
<b>editable</b>	boolean	Read-only. If <code>true</code> , this item is editable.
<b>evenodd</b>	boolean	If <code>true</code> , the even-odd rule should be used to determine insideness.
<b>fillColor</b>	<a href="#">Color</a>	The fill color of the path.
<b>filled</b>	boolean	If <code>true</code> , the path be filled.
<b>fillOverprint</b>	boolean	If <code>true</code> , the art beneath a filled object should be overprinted.
<b>guides</b>	boolean	If <code>true</code> , this path is a guide object.
<b>height</b>	number (double)	The height of the group item.
<b>left</b>	number (double)	The position of the left side of the item (in points, measured from the left side of the page).
<b>note</b>	string	The note text assigned to the path.
<b>opacity</b>	number (double)	The opacity of the object. Range: 0.0 to 100.0
<b>parent</b>	<a href="#">Layer</a> or <a href="#">GroupItem</a>	Read-only. The parent of this object.
<b>pathPoints</b>	<a href="#">PathPoints</a>	Read-only. The path points contained in this path item.
<b>polarity</b>	<a href="#">PolarityValues</a>	The polarity of the path.
<b>position</b>	array of 2 numbers	The position (in points) of the top left corner of the <code>textPathItem</code> object in the format <code>[x, y]</code> . Does not include stroke weight.
<b>resolution</b>	number (double)	The resolution of the path in dots per inch (dpi).
<b>selectedPathPoints</b>	<a href="#">PathPoints</a>	Read-only. All of the selected path points in the path.

Property	Value type	What it is
<code>strokeCap</code>	<a href="#">StrokeCap</a>	The type of line capping.
<code>strokeColor</code>	<a href="#">Color</a>	The stroke color for the path.
<code>stroked</code>	boolean	If <code>true</code> , the path should be stroked.
<code>strokeDashes</code>	object	Dash lengths. Set to an empty object, <code>{}</code> , for a solid line.
<code>strokeDashOffset</code>	number (double)	The default distance into the dash pattern at which the pattern should be started.
<code>strokeJoin</code>	<a href="#">StrokeJoin</a>	Type of joints for the path.
<code>strokeMiterLimit</code>	number (double)	When a default stroke join is set to <code>mitered</code> , this property specifies when the join will be converted to beveled (squared-off) by default. The default miter limit of 4 means that when the length of the point reaches four times the stroke weight, the join switches from a miter join to a bevel join. A value of 1 specifies a bevel join. Range: 1 to 500. Default: 4
<code>strokeOverprint</code>	boolean	If <code>true</code> , the art beneath a stroked object should be overprinted.
<code>strokeWidth</code>	number (double)	Width of the stroke.
<code>top</code>	number (double)	The position of the top of the item (in points, measured from the bottom of the page).
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>width</code>	number (double)	The width of the item.

## TextPath methods

Method	Parameter type	Returns	What it does
<code>setEntirePath</code> (pathPoints)	array of <code>[x, y]</code> coordinate pairs	Nothing	Sets the path using the array of points specified as <code>[x, y]</code> coordinate pairs.

# TextRange

A range of text in a specific text art item. `TextRange` gives you access to the text contained in text art items.

## TextRange properties

Property	Value type	What it is
<code>characterAttributes</code>	<a href="#">CharacterAttributes</a>	Read-only. The character properties for the text range.
<code>characterOffset</code>	number (long)	Offset of the first character.
<code>characters</code>	<a href="#">Characters</a>	Read-only. All the characters in this text range.
<code>characterStyles</code>	<a href="#">CharacterStyles</a>	Read-only. All referenced character styles in the text range.
<code>contents</code>	string	The text string.
<code>insertionPoints</code>	<a href="#">InsertionPoints</a>	Read-only. All the insertion points in this text range.
<code>kerning</code>	number (long)	Controls the spacing between two characters, in thousandths of an em. An integer.
<code>length</code>	number (long)	The length (in characters). Minimum: 0
<code>lines</code>	<a href="#">Lines</a>	Read-only. All the lines in this text range.
<code>paragraphAttributes</code>	<a href="#">ParagraphAttributes</a>	Read-only. The paragraph properties for the text range.
<code>paragraphs</code>	<a href="#">Paragraphs</a>	Read-only. All the paragraphs in this text range.
<code>paragraphStyles</code>	<a href="#">ParagraphStyles</a>	Read-only. All referenced paragraph styles in the text range.
<code>parent</code>	<a href="#">TextRange</a>	Read-only. The object's container.
<code>story</code>	<a href="#">Story</a>	Read-only. The story to which the text range belongs.
<code>textRanges</code>	<a href="#">TextRanges</a>	Read-only. All of the text in this text range.
<code>textSelection</code>	array of <a href="#">TextRange</a>	Read-only. The selected text ranges in the text range.
<code>typename</code>	string	Read-only. The class name of the object.
<code>words</code>	<a href="#">Words</a>	Read-only. All the words contained in this text range.

## TextRange methods

Method	Parameter Type	Returns	What it does
<b>changeCaseTo</b> (type)	<a href="#">CaseChangeType</a>	Nothing	Changes the capitalization of text.
<b>deselect</b> ( )		Nothing	Deselects the text range.
<b>duplicate</b> ([relativeObject] [,insertionLocation])	object <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Creates a duplicate of this object.
<b>move</b> (relativeObject, insertionLocation)	object <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Moves the object.
<b>remove</b> ( )		Nothing	Deletes the object.
<b>select</b> ([addToDocument])	boolean	Nothing	Selects the text range. If <code>addToDocument</code> is <code>true</code> , adds this to the current selection; otherwise replaces the current selection.

## Manipulating text

```
// Changes size of the first character of each word in the
// current document by changing the size attribute of each character

if ( app.documents.length > 0 ) {
  for ( i = 0; i < app.activeDocument.textFrames.length; i++ ) {
    text = app.activeDocument.textFrames[i].textRange;
    for ( j = 0 ; j < text.words.length; j++ ) {
      //each word is a textRange object
      textWord = text.words[j];
      // Characters are textRanges too.
      // Get the first character of each word and increase it's size.
      firstChars = textWord.characters[0];
      firstChars.size = firstChars.size * 1.5;
    }
  }
}
```

# TextRanges

A collection of `TextRange` objects.

## TextRanges properties

Property	Value type	What it is
<code>length</code>	<code>number</code>	Read-only. Number of elements in the collection.
<code>parent</code>	<code>object</code>	Read-only. The object's container.
<code>typename</code>	<code>string</code>	Read-only. The class name of the object.

## TextRanges methods

Method	Parameter type	Returns	What it does
<code>index</code> <code>(itemKey)</code>	<code>string, number</code>	<a href="#">TextRange</a>	Get an element from the collection
<code>removeAll</code> <code>()</code>		Nothing	Deletes all elements in the object.

# TracingObject

A tracing object, which associates source raster art item with a vector-art plug-in group created by tracing. Scripts can initiate tracing using `PlacedItem.trace` or `RasterItem.trace`. The resulting `PluginItem` object represents the vector art group, and has this object in its `tracing` property.

A script can force the tracing operation by calling the application's `redraw` method. The operation is asynchronous, so a script should call `redraw` after creating the tracing object, but before accessing its properties or expanding the tracing to convert it to an art item group.

The read-only properties that describe the tracing result have valid values only after the first tracing operation completes. A value of 0 indicates that the operation has not yet been completed.

## TracingObject properties

Property	Value type	What it is
<code>anchorCount</code>	number (long)	Read-only. The number of anchors in the tracing result.
<code>areaCount</code>	number (long)	Read-only. The number of areas in the tracing result.
<code>imageResolution</code>	number (real)	Read-only. The resolution of the source image in pixels per inch.
<code>parent</code>	object	Read-only. The object's container.
<code>pathCount</code>	number (long)	Read-only. The number of paths in the tracing result.
<code>sourceArt</code>	<a href="#">PlacedItem</a> or <a href="#">RasterItem</a>	The raster art used to create the associated vector art plug-in group.
<code>tracingOptions</code>	<a href="#">TracingOptions</a>	The options used to convert the raster artwork to vector art.
<code>typename</code>	string	Read-only. The class name of the object.
<code>usedColorCount</code>	number (long)	Read-only. The number of colors used in the tracing result.

## TracingObject methods

Method	Parameter type	Returns	What it does
<code>expandTracing</code> ( <code>[viewed]</code> )	boolean	<a href="#">GroupItem</a>	<p>Converts the vector art into a new group item. The new <code>GroupItem</code> object replaces the <code>PluginItem</code> object in the document. By default, <code>viewed</code> is <code>false</code>, and the new group contains only the tracing result (the filled or stroked paths). If <code>viewed</code> is <code>true</code>, the new group retains additional information that was specified for the viewing mode, such as outlines and overlays.</p> <p>Deletes this object and its associated <code>PluginItem</code> object. Any group-level attributes that were applied to the plug-in item are applied to the top level of the new group item.</p>
<code>releaseTracing</code> ( )		<a href="#">PlacedItem</a> or <a href="#">RasterItem</a>	<p>Reverts the artwork in the document to the original source raster art and removes the traced vector art. Returns the original object used to create the tracing, and deletes this object and its associated <code>PluginItem</code> object.</p>

# TracingOptions

A set of options used in converting raster art to vector art by tracing.

## TracingOptions properties

Property	Value type	What it is
<code>cornerAngle</code>	number (double)	The sharpness, in degrees of a turn in the original image that is considered a corner in the tracing result path. Range: 0 to 180
<code>fills</code>	boolean	If <code>true</code> , trace with fills. At least one of <code>fills</code> or <code>strokes</code> must be <code>true</code> .
<code>ignoreWhite</code>	boolean	If <code>true</code> , ignores white fill color.
<code>livePaintOutput</code>	boolean	If <code>true</code> , result is LivePaint art. If <code>false</code> , it is classic art.  <b>NOTE:</b> A script should only set this value in preparation for a subsequent expand operation. Leaving a tracing on the artboard when this property is <code>true</code> can lead to unexpected application behavior.
<code>maxColors</code>	number (long)	The maximum number of colors allowed for automatic palette generation. Used only if <code>tracingMode</code> is <code>color</code> or <code>grayscale</code> . Range: 2 to 256
<code>maxStrokeWeight</code>	number (double)	The maximum stroke weight, when <code>strokes</code> is <code>true</code> . Range: 0.01 to 100.0
<code>minArea</code>	number (long)	The smallest feature, in square pixels, that is traced. For example, if it is 4, a feature of 2 pixels wide by 2 pixels high is traced.
<code>minStrokeLength</code>	number (double)	The minimum length in pixels of features in the original image that can be stroked, when <code>strokes</code> is <code>true</code> . Smaller features are omitted. Range: 0.0 to 200.0. Default: 20.0
<code>outputToSwatches</code>	boolean	If <code>true</code> , named colors (swatches) are generated for each new color created by the tracing result. Used only if <code>tracingMode</code> is <code>color</code> or <code>grayscale</code> .
<code>palette</code>	string	The name of a color palette to use for tracing. If the empty string, use the automatic palette. Used only if <code>tracingMode</code> is <code>color</code> or <code>grayscale</code> .
<code>parent</code>	object	Read-only. The object's container.
<code>pathFitting</code>	number (double)	The distance between the traced shape and the original pixel shape. Lower values create a tighter path fitting. Higher values create a looser path fitting. Range: 0.0 to 10.0

Property	Value type	What it is
<code>preprocessBlur</code>	number (double)	The amount of blur used during preprocessing, in pixels. Blurring helps reduce small artifacts and smooth jagged edges in the tracing result. Range: 0.0 to 2.0
<code>preset</code>	string	Read-only. The name of a preset file containing these options.
<code>resample</code>	boolean	If <code>true</code> , resample when tracing. (This setting is not captured in a preset file.)  Always <code>true</code> when the raster source art is placed or linked.
<code>resampleResolution</code>	number (double)	The resolution to use when resampling in pixels per inch (ppi). Lower resolution increases the speed of the tracing operation. (This setting is not captured in a preset file.)
<code>strokes</code>	boolean	If <code>true</code> , trace with strokes. At least one of <code>fills</code> or <code>strokes</code> must be <code>true</code> . Used only if <code>tracingMode</code> is black-and-white.
<code>threshold</code>	number (long)	The threshold value of black-and-white tracing. All pixels with a grayscale value greater than this are converted to black. Used only if <code>tracingMode</code> is black-and-white. Range: 0 to 255
<code>tracingMode</code>	<a href="#">TracingModeType</a>	The color mode for tracing.
<code>typename</code>	string	Read-only. The class name of the object.
<code>viewRaster</code>	<a href="#">ViewRasterType</a>	The view for previews of the raster image. (This setting is not captured in a preset file.)
<code>viewVector</code>	<a href="#">ViewVectorType</a>	The view for previews of the vector result. (This setting is not captured in a preset file.)

## TracingOptions methods

Method	Parameter type	Returns	What it does
<code>loadFromPreset</code> (presetName)	string	boolean	Loads a set of options from the specified preset, as found in the <code>Application.tracingPresetsList</code> array.
<code>storeToPreset</code> (presetName)	string	boolean	Saves this set of options in the specified preset. Use a name found in the <code>Application.tracingPresetsList</code> array, or a new name to create a new preset. For an existing preset, overwrites an unlocked preset and returns <code>true</code> . Returns <code>false</code> if the preset is locked.

# Variable

A document-level variable that can be imported or exported.

A variable is a dynamic object used to create data-driven graphics. For an example, see [Dataset](#). Variables are accessed in Illustrator through the Variables palette.

## Variable properties

Property	Value type	What it is
<b>kind</b>	<a href="#">VariableKind</a>	The variable's type.
<b>name</b>	string	The name of the variable.
<b>pageItems</b>	<a href="#">PageItems</a>	Read-only. All of the artwork in the variable.
<b>parent</b>	object	Read-only. The object that contains the variable.
<b>typename</b>	string	Read-only. The class name of the referenced object.

## Variable methods

Method	Parameter type	Returns	What it does
<b>remove</b> ( )		Nothing	Removes the variable from the collection of variables.

# Variables

The collection of `Variable` objects in the document. For an example of how to create variables, see [Using variables and datasets](#).

## Variables properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of variables in the document
<code>parent</code>	object	Read-only. The object that contains the collection of variables.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Variables methods

Method	Parameter type	Returns	What it does
<code>add</code> ( )		Variable	Adds a new variable to the collection.
<code>getByName</code> (name)	string	Variable	Get the first element in the collection with the provided name.
<code>index</code> (itemKey)	string, number	Variable	Get an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in the collection.

# View

A document view in an Illustrator document, which represents a window view onto a document. Scripts cannot create new views, but can modify some properties of existing views, including the center point, screen mode, and zoom.

## View properties

Property	Value type	What it is
<code>bounds</code>	array of 4 numbers	Read-only. The bounding rectangle of this view relative to the current document's bounds.
<code>centerPoint</code>	array of 2 numbers	The center point of this view relative to the current document's bounds.
<code>parent</code>	<a href="#">Document</a>	Read-only. The document that contains this view.
<code>screenMode</code>	<a href="#">ScreenMode</a>	The mode of display for this view.
<code>typename</code>	string	Read-only. The class name of the referenced object.
<code>zoom</code>	number (double)	The zoom factor of this view, where 100.0 is 100%.

## Setting a view to full screen

```
// Sets the screen mode of the current document to full screen

if ( app.documents.length > 0 ) {
    app.documents[0].views[0].screenMode = ScreenMode.FULLSCREEN;
}
```

# Views

A collection of `View` objects in a document.

## Views properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

## Views methods

Method	Parameter type	Returns	What it does
<code>index</code> (itemKey)	string, number	<a href="#">View</a>	Gets an element from the collection.

## Words

A collection of words in a text item, where each word is a `TextRange` object. The elements are not named; you must access them by index.

### Words properties

Property	Value type	What it is
<code>length</code>	number	Read-only. The number of objects in the collection.
<code>parent</code>	object	Read-only. The parent of this object.
<code>typename</code>	string	Read-only. The class name of the referenced object.

### Words methods

Method	Parameter type	Returns	What it does
<code>add</code> (contents [, relativeObject] [, insertionLocation])	string <a href="#">TextFrameItem</a> <a href="#">ElementPlacement</a>	<a href="#">TextRange</a>	Adds a word to the current document at the specified location. If no location is specified, adds it to the containing text frame after the current word selection or insertion point.
<code>addBefore</code> (contents)	string	<a href="#">TextRange</a>	Adds a word before the current word selection or insertion point.
<code>index</code> (itemKey)	number	<a href="#">TextRange</a>	Gets an element from the collection.
<code>removeAll</code> ( )		Nothing	Deletes all elements in this collection.

### Counting words

```
// Counts all words in current document and stores total in numWords

if ( app.documents.length > 0 ) {
    numWords = 0;
    for ( i = 0; i < app.activeDocument.textFrames.length; i++) {
        numWords += app.activeDocument.textFrames[i].words.length;
    }
}
```

## Applying attributes to words

```
// Creates a new magenta color and applies the color to all words meeting a specific
criteria

if ( app.documents.length > 0 && app.activeDocument.textFrames.length > 0 ) {
    // Create the color to apply to the words
    wordColor = new RGBColor();
    wordColor.red = 255;
    wordColor.green = 0;
    wordColor.blue = 255;
    // Set the value of the word to look for
    searchWord1 = "the";
    searchWord2 = "The";
    searchWord3 = "THE";
    // Iterate through all words in the document
    // and color the words that match searchWord
    for ( i = 0; i < app.activeDocument.textFrames.length; i++ ) {
        textArt = activeDocument.textFrames[i];
        for ( j = 0; j < textArt.words.length; j++ ) {
            word = textArt.words[j];
            if ( word.contents == searchWord1 || word.contents == searchWord2 ||
                word.contents == searchWord3 ) {
                word.filled = true;
                word.fillColor = wordColor;
            }
        }
    }
}
```

## 2 Scripting Constants

This chapter lists and describes the enumerations defined for use with Illustrator JavaScript properties and methods.

Constant Type	Values	Type	What it means
<b>AlternateGlyphsForm</b>			
	DEFAULTFORM	THIRDWIDTH	
	TRADITIONAL	QUARTERWIDTH	
	EXPERT	FULLWIDTH	
	JIS78FORM	PROPORTIONALWIDTH	
	JIS83FORM	JIS90FORM	
	HALFWIDTH	JIS04FORM	
<b>AntiAliasingMethod</b>			
	None	TYPEOPTIMIZED	The type of antialiasing method used in the rasterization. <ul style="list-style-type: none"><li>▶ None — No antialiasing is allowed.</li><li>▶ ARTOPTIMIZED — Optimize for the art object.</li><li>▶ TYPEOPTIMIZED — Optimize for the type object.</li></ul>
	ARTOPTIMIZED		
<b>ArtClippingOption</b>			
	OUTPUTARTBOUNDS		How the art should be clipped during output. <ul style="list-style-type: none"><li>▶ OUTPUTARTBOUNDS — Output size is the size of the artwork.</li><li>▶ OUTPUTARTBOARDBOUNDS — Output size is the size of the artboard.</li><li>▶ OUTPUTCROPRECTBOUNDS — Output size is the size of the crop area.</li></ul>
	OUTPUTARTBOARDBOUNDS		
	OUTPUTCROPRECTBOUNDS		
<b>AutoCADColors</b>			
	Max8Colors	Max256Colors	
	Max16Colors	TrueColors	

<b>Constant Type</b>	<b>Values</b>	<b>What it means</b>	
<b>AutoCADCompatibility</b>			
	AutoCADRelease13	AutoCADRelease18	
	AutoCADRelease14	AutoCADRelease21	
	AutoCADRelease15	AutoCADRelease24	
<b>AutoCADExportFileFormat</b>			
	DXF	DWG	
<b>AutoCADExportOption</b>			
	PreserveAppearance		
	MaximizeEditability

	ENTITIES	STYLEATTRIBUTES
	PRESENTATIONATTRIBUTES	STYLEELEMENTS
<b>SVGDocumentEncoding</b>		
	ASCII	How should the text in the document be encoded when exporting an SVG file
	UTF8	
	UTF16	

<b>Constant Type</b>	<b>Values</b>	<b>What it means</b>
<b>SVGDTDVersion</b>		
	SVG1_0 SVG1_1 SVGBASIC1_1	SVGTINY1_1 SVGTINY1_1PLUS SVGTINY1_2
		SVB version compatibility for exported files
<b>SVGFontSubsetting</b>		
	ALLGLYPHS COMMONENGLISH COMMONROMAN GLYPHSUSED	GLYPHSUSEDPLUSENGLISH GLYPHSUSEDPLUSROMAN None
		What font glyphs should be included in exported SVG files
<b>SVGFontType</b>		
	CEFFONT SVGFONT OUTLINEFONT	
		Types for fonts included in exported SVG files
<b>SymbolRegistrationPoint</b>		
	SYMBOLTOPLEFTPOINT SYMBOLTOPMIDDLEPOINT SYMBOLTOPRIGHTPOINT SYMBOLMIDDLELEFTPOINT SYMBOLCENTERPOINT SYMBOLMIDDLERIGHTPOINT SYMBOLBOTTOMLEFTPOINT SYMBOLBOTTOMMIDDLEPOINT SYMBOLBOTTOMRIGHTPOINT	
		Registration points for symbols
<b>TabStopAlignment</b>		
	Center Decimal	Left Right
		The alignment of a tab stop
<b>TextAntialias</b>		
	CRISP NONE SHARP STRONG	
		The type of text anti-aliasing in a text art item
<b>TextOrientation</b>		
	HORIZONTAL VERTICAL	
		The orientation of text in a text art item
<b>TextPreservePolicy</b>		
	AUTOMATICALLYCONVERTTEXT OUTLINETEXT KEEPTEXTEDITABLE RASTERIZETEXT	
		The text-preserve policy used by the FXG file format.
<b>TextType</b>		
	AREATEXT POINTTEXT PATHTEXT	
		The type of text art displayed by this object

Constant Type	Values	What it means
<b>TIFFByteOrder</b>	IBMP MACINTOSH	The byte order to use for an exported TIFF file.
<b>TracingModeType</b>	TRACINGMODEBLACKANDWHITE TRACINGMODECOLOR TRACINGMODEGRAY	
<b>Transformation</b>	BOTTOM LEFT BOTTOMLEFT RIGHT BOTTOMRIGHT TOP CENTER TOPLEFT DOCUMENTORIGIN TOPRIGHT	The point to use as the anchor point about which an object is rotated, resized, or transformed
<b>TrappingType</b>	IGNOREOPAQUE OPAQUE NORMALTRAPPING TRANSPARENT	
<b>UserInteractionLevel</b>	DISPLAYALERTS DONTDISPLAYALERTS	User interface settings
<b>VariableKind</b>	GRAPH Unknown IMAGE VISIBILITY TEXTUAL	What type of variables are included in the document
<b>ViewRasterType</b>	TRACINGVIEWRASTERADJUSTEDIMAGE TRACINGVIEWRASTERNOIMAGE TRACINGVIEWRASTERORIGINALIMAGE TRACINGVIEWRASTERTRANSPARENTIMAGE	The raster visualization mode for tracing.
<b>ViewVectorType</b>	TRACINGVIEWVECTORNOTRACINGRESULT TRACINGVIEWVECTOROUTLINES TRACINGVIEWVECTOROUTLINESWITHTRACING TRACINGVIEWVECTORTRACINGRESULT	The vector visualization mode for tracing.
<b>WariChuJustificationType</b>	Center Left Right WARICHUAUTOJUSTIFY WARICHUFULLJUSTIFY WARICHUFULLJUSTIFYLASTLINECENTER WARICHUFULLJUSTIFYLASTLINELEFT WARICHUFULLJUSTIFYLASTLINERIGHT	

---

<b>Constant Type</b>	<b>Values</b>	<b>What it means</b>
<b>ZOrderMethod</b>	BRINGFORWARD BRINGTOFRONT	SENDERBACKWARD SENDERTOBACK
		The method used to arrange an art item's position in the stacking order of its parent group or layer, as specified with the <code>zOrder</code> method

---
