## What is Adobe Media Server 5 Professional?

Adobe® Media® Server 5 Professional software, when combined with Adobe® Access 4, streams protected, studio-grade content using a single digital rights management (DRM) workflow across desktops, connected TVs, tablets and smartphones, including Apple iOS native apps and Android™. Target larger audiences, improve quality and reduce costs with a simple workflow.

 <p><b>Studio-grade DRM packaging</b> Package content for a single digital rights management (DRM) workflow that targets the desktop, connected TVs, tablets, and smartphones, including iOS and Android platforms, when you include Adobe Access 4 software (available separately).</p>	 <p><b>On-demand packaging for HTTP</b> Deliver video using HTTP for Flash Player compatible and iOS devices without preparing the assets ahead of time. On-demand packaging makes publishing easier by requiring one set of video files to deliver to multiple devices with or without Flash Player installed.</p>	 <p><b>Protected HTTP streaming for iOS</b> Expand your audience to include iOS devices with HTTP Live Streaming (HLS). With the same media and live streams as those used for Flash Player compatible playback, you can deliver and protect full adaptive bitrate experiences to iOS devices as well as HTML5-enabled browsers.</p>	 <p><b>Protected HTTP streaming for Flash Player</b> Protect and monetize your HD video with easy-to-use content protection built on Adobe Access software (with no additional DRM license servers) to add massive scale and robust protection to your media assets or live streams.</p> <p><a href="#">Fragment Proxy Page</a></p>
